

Bradford Affordable Housing Economic Viability
Assessment

Annex A - Further Viability Testing

For The City of Bradford Metropolitan District Council

Ву

Levvel

November 2010

Introduction

- Due to the volume of information and scale of data and sensitivities tested key results have been shown within the Affordable Housing Economic Viability Assessment. For completeness this document includes the results of a wider range of sensitivities assessed in each value area and on each notional scheme type.
- Each figure in this Annex relates to the same numbered figure in the main report. For example, if Figure 7 in the main report shows the baseline position for a 50 unit, 35 dwelling per hectare scheme in Value Area 3, Figure 7 in this report will show the outputs of all of the different sensitivity tests (14 in total) undertaken on the exact same scheme. Where cells for a test are all yellow sensitivity testing on this variable has not been undertaken.
- 1.3 Sensitivity tests are contained within this annex for all general development sites (ranging from 15 150 units) and all small sites (ranging from 5 10 units). Sensitivity testing on large sites (500 units) has not been included within this annex due to the difference in methodology used on sites of this nature as outlined within the main report. There is thus a gap in the numbering between figures 71 and 84 which are the figures in the main report that relate to large sites.
- 1.4 This sensitivity testing allows for the assessment of the effects of reducing or increasing certain costs to development.

Figure 1 - Sensitivity Testing
