## Preface

This is the Bradford Open Space Audit report prepared by the City of Bradford Metropolitan District Council. It replaces the previous open space assessment from 2006. The principal purpose of the study is to provide part of the evidence base for the preparation of the Bradford Local Plan.

Open Space plays an important role in the sustainable development of settlements. It provides a number of quality-of-life benefits for communities including providing the opportunity for people to live active and healthy life styles, encouraging physical activity, helping to improve mental and physical health, providing a connection to the natural environment, supporting wildlife and biodiversity, and helping to mitigate against the impacts of climate change.

The report provides an up-to-date assessment of the amount of open space within the settlements of the Bradford District, following the latest guidance and best practice it aims to ensure the provision of a robust and credible evidence base to support the policy direction of the Local Plan and to identify sites to be designated as protected open space.

A series of local standards have been derived based on the findings of the audit, a review of national guidance and consideration of the standards of neighbouring local authorities. These standards have been applied to the quantity figures at a settlement level to look at performance, to identify where there are surpluses and deficiencies of open space and to help highlight the priorities for increased provision.

The assessment has also considered the accessibility to open space sites and again set standards for the different typologies of open space. These standards have been applied to the sites identified in the audit and this has helped to highlight those parts of the District, which not only have poor levels of provision, but also have poor access to the different types of spaces.

Finally, an overview of ownership, accessibility (in terms of open public access), site sizes and a comparison with areas of high deprivation has helped to give a holistic picture of the key issues that need to be addressed relating to future provision of open space.

## 1. Introduction

- 1.1 Open space is an important and valuable resource offering many benefits for our communities and the wider environment. It provides an opportunity for people to interact with one another, experience nature and often provides the setting for the built environment. It plays a vital role in providing space for sport, recreation and leisure activities. Open space is a key component of the Green Infrastructure network across the district, contributing to the mitigation of climate change by supporting flood alleviation, providing habitats for wildlife and giving people an opportunity to live active life styles which helps to improve both physical and mental health and well-being.
- 1.2 The planning system, and in particular the Local Plan, has a duty to protect areas of important open space from development so that they can continue to provide the benefits outlined above. The proposed levels of growth that the District will need to support over the next few decades will see open space sites coming under increased competition and pressure from developers and the public. It is therefore important that the Council puts in place a robust and credible evidence base to identify the nature and scale of any quantitative or qualitative deficiencies or surpluses of open space to help understand which sites should be protected.
- 1.3 The Local Plan must help to ensure that there is a sufficient provision of open space to meet people's needs, that new development helps to increase levels of provision, as well as improving the quality and accessibility of spaces.
- 1.4 The Bradford Open Space Audit provides a quantitative assessment of the supply of open space across the District. This information provides the baseline position with regards to existing levels of open space and helps to identify those important spaces which should be protected. In combination with population data, local open space provision standards have been established and used to identify the priority areas where additional open space is required or where a rebalancing between types of open space could be considered.

## 2. Background and Context

- 2.1 The previous Open Space Assessment was carried out in 2006 by consultants Knight, Kavanagh and Page. This was the first comprehensive study on open space and looked to identify local needs, audit local provision, set local provision standards and apply those standards to identify surpluses and deficiencies. The study was used to support the preparation of the Core Strategy. However, over the last decade there have been a number of changes which have affected the amount of open space in the District. These changes include the loss of sites through redevelopment to alternative uses, such as housing, and the creation of new sites as part of new development. The assessment now needs to be reviewed and replaced to ensure that it provides the robust and credible information needed to support the preparation of the Local Plan.
- 2.2 The links between how an area is planned and developed, and the health and well-being of its population have long been established. The planning system through

the policies in the Local Plan or taking decisions on planning applications, can help to create communities that are healthy, happy and sustainable, by ensuring places are well-designed and which offer opportunities for leisure and recreation and access to employment and services.

2.3 Bradford faces a number of health challenges with obesity being a major issue. 38.6% of 10-11 year olds in the District are overweight compared to 34.3% nationally. 12.4% of adults in the District are classed as obese and again this is higher than the national rate of 9.4%. Coupled with issues of obesity are the levels of inactivity in the population. Nearly a quarter (23.3%) of adults aged 19 years and above in the District are physically inactive this is slightly higher than the national average (22.2%). Those residents in areas of high deprivation tend to suffer from worse health and often have a cluster of unhealthy behaviours including smoking, drinking, poor diets and low levels of physical activity. The provision of good quality open space can play an important part in helping to encourage people to participate in physical activity thereby helping to improve their health and well-being.

2.4 Open space is an important asset as it provides quality of life benefits for the District's residents as well as providing habitats for wildlife, and helping to reduce flooding and mitigate against climate change.

---

### Vision, Aims and Objectives

2.5 Providing a vision for open space in the Bradford District is important to help inform the direction of new planning policy. The vision set out below has been developed taking account of a number of council and other strategies relating to the importance of open space as well as the key issues that affect the provision of open space and the benefits that it can provide.

#### VISION

Land identified in this assessment and designated in the Local Plan as open space in the Bradford District will be protected and enhanced.

Access to open space will be improved to ensure that all residents have the opportunity to participate in formal and informal sport, recreation, leisure and outdoor play activities, helping to improve both the physical and mental health and well-being of children and adults, and ensuring they benefit from the amenity value open spaces bring to the area.

Open spaces will form part of our active travel network, allowing more people to walk and cycle to local destinations and to reach public transport links.

The provision of open space will give residents access to nature, will help to support biodiversity, reduce flooding, and mitigate the effects of climate change - all of which are important for the future health and well-being of the District's population.

2.6 The aim of this study is to understand the supply and demand for open spaces and to provide up-to-date data on the amount and accessibility of open space in the

District. Consideration will be given to how the demand will grow in the future as the population grows and people become more physically active and make active travel choices. The spatial elements of the study will feed into the Local Plan and can be a material consideration in the determination of planning applications.

2.7 The main objectives are:

- To review and define the different types and sizes of open space.
- To audit the amount of open space there is in the District;
- To establish standards for the quantity and accessibility of the different typologies of open space.
- To identify whether there are surpluses or deficiencies of different types of open space against the established standards;
- To identify where there are gaps in provision and where the priorities are for new provision based on performance against the standards;
- To identify those areas with poor access to open space and determine where improvements to access can be made;

### 3. Policy

3.1 National and local planning policy sets out how open space should be protected and managed. It also establishes the approach to providing open space in new developments, the circumstances where open space may be lost and how this can be compensated.

#### National Policy and Guidance

3.2 The National Planning Policy Framework (NPPF) (paragraph 96) indicates that: “access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities”.

3.3 It requires planning policies to be based on robust and up-to-date assessments of the need for open space, sport and recreation facilities and opportunities for new provision.

3.4 The NPPF indicates that information gained from the assessment should be used to determine what open space, sport and recreational provision is needed within the area and this should then be accommodated within the plan.

3.5 The Planning Practice Guidance (PPG) indicates that it is for local planning authorities to assess the need for open space and opportunities for new provision in their areas. The PPG does not provide specific guidance on the methods to be used for carrying out such assessment.

3.6 Previous guidance in “Assessing needs and opportunities: a companion guide to PPG17: Planning for Open Space, Sport and Recreation” has now been withdrawn, but it is still considered to be a useful source of guidance for preparing open space assessments. It provides an established methodology which is still used by many local authorities and its four guiding principles for local assessments can still be followed where appropriate. These are that:

- Local needs are likely to vary from one place to another, according to the different socio-economic and cultural characteristics of local communities.
- Multi-disciplinary working across different departments should be carried out to ensure the delivery of a network of high quality, sustainable open spaces and sport and recreation facilities.
- Delivering the objectives of national policy is likely to involve improving and enhancing the accessibility and quality of existing provision. However, any new provision that is required should enhance the network of open space.
- The value of open space, sport and recreation facilities, irrespective of who owns them, depends on the extent to which they meet clearly identified local needs and the wider benefits they generate for people, wildlife, biodiversity and the wider environment.

3.7 The NPPF (paragraph 99) also makes provision for the designation of Local Green Spaces (LGS) through local and neighbourhood plans. The PPG indicates that the LGS designation is a way to provide special protection against development for green areas of particular importance to local communities. The Open Space Assessment can help to provide the evidence to identify and support the designation of LGS sites.

3.8 In 2009 CABE prepared the Open Space Strategies: Best Practice Guidance which offers clear, practical guidance to local authorities and their stakeholders on how to prepare an open space strategy. Similar to the PPG17 companion guide it sets out a number of stages to follow for the preparation of an open space strategy. In particular, it provides details on how to collect data on existing open space sites; how to undertake surveys to understand the need and demand for open space; and how to analyse the findings and prepare an action plan.

3.9 The work stages provided in the CABE guidance have been adapted for the Bradford assessment and are summarised below:

- Stage 1: Establish the scope and purpose of the study
- Stage 2: Review the context and establish the methodology
- Stage 3: Understand the supply
- Stage 4: Understand the needs and demands
- Stage 5: Analyse the data
- Stage 6: Prepare the report and action plan

### Local Policy

3.10 The current local policy base for open space is set out in Policy EN1 of the Bradford Core Strategy. The key objective of the policy is to protect land identified as recreation open space from development. It sets out the exceptions where development may be permitted, these include where:

- The proposal includes alternative equivalent or better provision;
- The loss of open space does not lead to a deficiency in the area, taking account of the most recent assessments of provision and future proposals for growth;
- The site is not suitable to meet any identified deficiency in other types of open space.

3.11 The policy also requires housing developments to provide for new or improved open space, sport and recreational facilities. Major development in areas with an open space deficiency will be required to make a contribution to secure new provision. The policy also indicates that standards for the provision of open space in terms of quantity, quality and accessibility will be developed as part of the evidence base for the Local Plan. A key purpose of the Open Space Assessment is to formulate local standards.

3.12 Appendix 9 of the Core Strategy contains the accessibility standards for the different typologies of open space and the quantity, quality and accessibility standards for outdoor sports facilities that were established in the previous Open Space Assessment. These need to be reviewed and updated to ensure they are aligned with current best practice and policy, and reflect the findings of the assessment.

## Strategies and Other Guidance

### International and National Strategies and other guidance

3.13 There are a number of international and national strategies and other guidance documents which provide information on the provision of open green space and the benefits such spaces can provide. These can help to provide further context for the study. Some of these documents are summarised below:

#### Urban green space interventions and health: A review of impacts and effectiveness (World Health Organisation (WHO), 2017)

3.14 This report highlights that interventions to increase or improve urban green space can deliver positive health, social and environmental outcomes for all population groups, particularly among lower socioeconomic status groups. Yet, there is a need for better inclusion of health and equity outcomes in studies on green space interventions, and an improved monitoring of local green space management and related health and equity impacts.

3.15 The Open Space Assessment will need to have regard to the health and equity context of the Bradford District, especially when making recommendations relating to where intervention in green space provision is required.

#### Assessing needs and opportunities guide for indoor and outdoor sports facilities (Sport England, 2014)

3.16 This guidance provides a recommended approach to undertaking a robust assessment of need for indoor and outdoor sports facilities. The guide focuses on the needs for formal sport and recreation activities and the sport facilities required to meet these needs. It does not cover the wider typologies of open space such as play areas, amenity greenspace, parks, natural greenspace or green corridors.

3.17 The Open Space Assessment will only consider outdoor sports open space and not indoor sports facilities. This guidance will help to inform the assessment of outdoor sports sites. A separate study looking at indoor sports facilities will be considered in due course. In addition, the Playing Pitch Strategy provides more details and the approach to protecting playing pitches and providing new sites.

Local action on health inequalities: Improving access to green spaces (Public Health England, 2014)

3.18 This document sets out the links between the provision and access to green space and health inequalities. It presents the following five key messages:

1. There is significant and growing evidence on the physical and mental health benefits of green spaces. Research shows that access to green space is associated with better health outcomes and income-related inequality in health is less pronounced where people have access to green space.
2. Access to good quality green space is associated with a range of positive health outcomes including better self-rated health; lower body mass index scores, overweight and obesity levels; improved mental health and wellbeing and increased longevity in older people.
3. Access to green space is not equal across the population of England. People living in the most deprived areas are less likely to live in the greenest areas, and will therefore have less opportunity to gain the health benefits of green space compared with people living in the least deprived areas.
4. Increasing the use of good quality green space for all social groups is likely to improve health outcomes and reduce health inequalities. It can also bring other benefits such as greater community cohesion and less social isolation.
5. Local authorities play a vital role in protecting, maintaining and improving local green spaces and can create new areas of green space to improve access for all communities. Such efforts require joint working across different parts of the local authority and beyond, particularly public health, planning, transport, and parks and leisure.

3.19 The Open Space Assessment will be used to audit and assess open space sites in the District to establish those areas that require increased provision.

Walking in Urban Parks and Green Spaces (The Ramblers/TCPA, 2018)

3.20 This document presents the findings of market research which looked at the attitudes of people using parks and green spaces across Britain. It considers the health benefits which people can gain by walking through and using parks and green spaces. It looks at the way investment can be used to encourage more people to use these spaces to help improve their health.

3.21 The Open Space Needs and Demands Assessment which is the counterpart document to this Open Space Audit considers users/non-users/ perceptions of the current provision of open space, including parks and identifies those factors which would encourage further usage. This will be coupled with the audit findings on whether there is adequate park provision in each settlement area.

---

#### 25 Year Environment Plan (DEFRA, 2018)

- 3.22 This document sets out the government's action to help the natural world regain and retain good health. It aims to deliver cleaner air and water in cities and in the rural landscape, protect threatened species and provide richer wildlife habitats. Some of the plan's key policies include helping people improve their health and wellbeing by using green spaces and greening our towns and cities by creating more green infrastructure.
- 3.23 The open space audit will set out the baseline level of provision and show where there needs to be improvements to the provision and accessibility of open space to ensure the health benefits can be realised.

---

#### National Design Guide (MHCLG, 2019)

- 3.24 The National Design Guide provides guidance on the principles and components of good design and sets out the ten characteristics the government considers important to achieve beautiful, enduring and successful places. Characteristic 5 is entitled Nature and its first principle is to *Provide high quality, green open spaces with a variety of landscapes and activities, including play*. Characteristic 6 looks at how to create well-located, high quality and attractive public spaces.
- 3.25 The open space audit helps to establish the requirements, needs and priorities for different types of open space and this fits with the national design guide's aims for the ability of spaces to support a range of activities and provide amenity value.

---

#### Living with Beauty (Building Better, Building Beautiful Commission, 2020)

- 3.26 This document sets out proposals for a new development and planning framework in which beauty is at the heart. The document makes eight policy proposals, with the sixth being Nature: re-green our towns and cities. This policy section highlights that "*there is a considerable body of evidence that shows green spaces in rural and urban areas are highly beneficial to health and well-being and also provide space for people to meet. The perception of beauty is an important factor for realising these benefits.*"
- 3.27 The report recommends the following: "*Policy Proposition 30: ask for more access to greenery. The NPPF should be updated to place a greater focus on access to nature and green spaces – both existing and new – for all new and remodelled developments. This must not be negotiated away on 'viability grounds.' Policies such as those set out in policy G5 ('Urban greening') in the London Plan and the concept of the Urban Greening Factor should be applied more widely though adjusted as necessary for less urban environments.*"
- 3.28 The Open Space Audit work can help to support this approach by identifying the areas which need additional green space and setting the standards for quantity and access to ensure people have sufficient space in their neighbourhoods.

## Local Strategies

3.29 There are a number of District wide strategies which relate to the provision, access and benefits of open space. A summary of these documents is provided below along with commentary on how the Open Space Audit can support these strategies.

### Connecting people and place for better health and wellbeing – A Joint Health and Wellbeing Strategy for Bradford and Airedale (2018-2023)

3.30 This strategy establishes the following four key outcomes:

- Our children have a great start in life;
- People in Bradford District have good mental wellbeing;
- People in all parts of the District are living well and ageing well;
- Bradford District is a healthy place to live, learn and work.

3.31 The strategy includes an ambition to provide new urban green space making it easier to meet, play, connect to nature and be active. The strategy indicates that one of the measures of success is that people have access to green space. The Open Space Audit will help to show the levels of access to the different types of open space for each community. This information can be used to identify the areas which require improved access to open space. Future monitoring of this data will help to show the success of this strategy.

### Planning a healthy, happy Bradford District (2018-2023) (Bradford Council, 2018)

3.32 This document provides a set of ambitions to ensure that the District becomes a thriving, healthy and growing place. One of these ambitions is to increase and improve urban green space. It recognises the link between access to open space and mental health. It indicates that increasing the amount of useable urban greenspace will help to improve wellbeing, reduce health inequalities and may help to reduce demand on the health service.

3.33 The Open Space Audit will be an important evidence base document to help show the locations which are a priority for increased provision. The quality assessment will also be useful to identify where improvements need to be made to existing open spaces.

### Playing Pitch Strategy (2018) (KKP, 2019)

3.34 Consultants Knight, Kavanagh and Page (KKP) were commissioned to prepare a Playing Pitch Strategy (PPS) for the District.

3.35 This strategy sets out the current levels of provision of playing pitches for different sports across the District. It provides a clear, strategic framework for the maintenance and improvement of existing playing pitches and ancillary facilities up to 2030. The primary purpose of the Playing Pitch Strategy is to provide a strategic framework which ensures that the provision of outdoor playing pitches meet local

and community needs of existing and future residents and visitors to the Bradford District.

3.36 The findings from the PPS will inform the open space assessment work as there is likely to be significant crossover between playing pitch sites and outdoor sports sites. Any action plan prepared as part of the wider Open Space Assessment will need to be cross referenced with the PPS action plan.

#### Active Bradford - Physical Activity and Sport: A Strategic Framework for the Bradford District

3.37 This strategy provides a framework which will be used to shape plans to help increase activity levels across the district. The purpose of the strategy is to influence decision makers on the role that physical activity and sport can play, support those planning and delivering opportunities, develop new opportunities through strategic plans and programmes, and promote opportunities through campaigns and other communications.

3.38 The Open Space Audit has a key role to play in ensuring there is sufficient open space provision in the District, thereby helping to provide the opportunity for people to become more active. The study will therefore support the aims of the Active Bradford strategy.

#### Playable Spaces Strategy

3.39 The Playable Spaces Strategy has been prepared to set out how the Council will prioritise the refurbishment and enhancement of the range of play facilities that it manages across the District and to set out a spending and delivery programme.

3.40 The strategy sets out a number of key principles including:

1. Ensure a needs based and proportionate investment toward the existing playable spaces.
2. Accommodate the demand for the change in emphasis from providing traditional fixed play areas to create opportunities for more natural, informal and flexible playable spaces with opportunities for more community involvement and active play.
3. Deliver a hierarchy of playable spaces across the District which builds upon the existing offer from 'Destination' scale to 'Doorstep' level provision.
4. Provide a strategic policy against which requests for new play facilities or proposals for housing development can be measured and assessed in an objective manner to ensure a needs based and proportionate distribution of facilities across all parts of the District.
5. Work with key internal and external stakeholders to support and ensure alignment with current and proposed playable spaces related projects being co-delivered in the District. These projects will provide an evidential basis for

best practice to inform the strategy and enable the delivery model to benefit from any lessons learned.

3.41 The Open Space Audit will support the Playable Spaces Strategy by helping to highlight those areas with a deficit of provision or poor access to provision.

## 4. Methodology

- 4.1 This section sets out the methodology which has been used to carry out the Open Space Audit. It provides the definitions of key terms, including the typologies of open space; it establishes the site size thresholds and the geographical areas for the analysis; it explains the process for auditing each open space site – including the development of the database and use of Geographical Information Systems (GIS) to record and analyse the data.
- 4.2 It is important to provide a definition of open space in order to establish the types of sites which will be included in the audit. Open Space is defined in a number of planning documents and these are set out in Table 4.1 below:

**Table 4.1 Open Space Definitions**

Source	Definition
Town and Country Planning Act 1990 (Section 336)	Land laid out as public garden, or used for the purposes of public recreation, or land which is a disused burial ground.
NPPF	All open space of public value, including not just land, but also areas of water (such as rivers, canals, lakes and reservoirs) which offer important opportunities for sport and recreation and can act as a visual amenity.
PPG	Open space, which includes all open space of public value, can take many forms, from formal sports pitches to open areas within a development, linear corridors and country parks.
CABE Best practice guidance (2009)	All open spaces within a local authority area regardless of ownership and the extent of public access, except private gardens.

- 4.3 For the purposes of this Open Space Audit the following definition will be used:

### Open Space Definition

Open space is an area of land or water which is in public or private ownership. It is located within a defined settlement boundary or provides a recreational facility within the Green Belt. It includes spaces which provide a visual amenity, a sporting or recreation function, a wildlife area, and may be in the form of a park, sport pitch, play area, cemetery, civic space, linear corridor or environmental designation.

- 4.4 The previous Open Space Assessment used the typologies defined in the companion guide to PPG17. Although this guidance has now been withdrawn the typologies are still relevant and are used in a considerable number of open space assessments across the country. Guidance on the preparation of open space strategies by CABE also refers to these typologies. It advises that any refinement of these typologies should be done by adding sub-categories. This will provide consistency to maintain a strategic context, facilitate cross-boundary working and allow benchmarking between authorities. Similar typologies are also used by the Fields in Trust in its guidance: Beyond the Six Acre Standard.

4.5 Policy EN1 of the Core Strategy looks to protect recreation open space from being developed and includes the following typologies: parks and gardens; natural and semi-natural greenspace; green corridors; amenity and local greenspace, outdoor sports facilities; provision for children; allotments; civic spaces; and also areas of water which offer opportunities for sport and recreation.

4.6 Table 4.2 provides a list and definition of the typologies which will be used in the new Open Space Audit. They reflect those used in the Core Strategy, with the exception of cemeteries and the additional typology of Open Land in Settlements which are not specifically covered by Policy EN1, and are largely the same as those used in the previous study but have been amended where appropriate to reflect changes in national guidance and local circumstances.

**Table 4.2 Open Space Typology Definitions**

Typology	Definition / Comment
Allotments	Includes community gardens and urban farms. These sites provide opportunities for those who wish to grow their own produce (food) as part of the long term promotion of sustainability, health and social inclusion.
Amenity greenspace	Includes grassed areas in housing estates, village greens and other incidental grassed/planted areas. These are sites that provide opportunities for informal activities close to home or work, as well as sites which enhance the appearance of residential or other areas providing visual amenity.
Cemeteries	These are sites which provide for quiet contemplation and burial of the dead. These areas often provide useful links for wildlife and biodiversity. This typology includes churchyards and grounds, burial grounds, civic cemeteries.
Civic spaces	Includes civic and market squares, areas of public realm and hard-landscaped urban parks as well as other key hard-surfaced areas for pedestrians. They provide the setting for civic buildings and provide opportunities for informal recreation, public demonstrations and community events.
Green and Blue corridors	Includes rivers and canals and their associated banks, cycleways, some key rights of way, disused railway lines and other transport corridors. They are used for walking, cycling or horse riding; for leisure or travel purposes. They also provide opportunities for wildlife migration.
Natural and semi-natural greenspace	Includes urban woodland, local nature reserves, scrubland, grassland, heath or moorland, wetlands, wastelands and areas of unmaintained/unused sites where nature has taken-over. These are sites for wildlife conservation, biodiversity, environmental education and awareness. Will include some formally designated wildlife sites.
Open land in settlements	These sites are typically large open areas of land which are located within a settlement boundary. They often consist of farmland or other open grassland usually in private ownership with limited public access. They can provide a separation between different areas of a settlement and play a role in the character and setting of a settlement. They may also provide an amenity function and often provide a landscape buffer.
Outdoor sports facilities	These are sites which provide opportunities for participation in outdoor sports such as pitch sports, tennis, bowls, athletics or countryside and water sports. Sites include formally laid out pitches, informal recreation grounds and playing fields, golf courses, and school playing fields. They also include multi-use games areas (MUGAs), ball courts, and outdoor gyms.

**Table 4.2 Open Space Typology Definitions**

Typology	Definition / Comment
Parks and gardens	Includes urban parks, country parks, pocket parks and formal gardens. These spaces are accessible and provide opportunities for informal recreation and community events.
Provision for children and young people	Includes equipped play areas (EPAs), skateboard/skate parks/BMX areas and teenage shelters. These areas are designated for play and social interaction involving children and young people. The sub-categories for this typology follow those outlined in the Council's Playable Spaces Strategy (and also partly reflect the FiT categories of LAPs, LEAPs, and NEAPs).

4.7 These typologies represent different types of open space, the majority of which are linked to recreation and leisure uses. Each site is classified by typology based on the primary role that it plays. However, there may be cases where some sites perform more than one role. For example, there may be areas of woodland within a Park which could be classified as both Natural Greenspace and Park open space. Wherever possible only one typology will be assigned to each site to avoid double counting in terms of the amount of open space available. For the mapping of sites on the GIS system, there may be instances of sites within sites where one site (polygon) will be 'cut out' of another site (polygon) to distinguish between different typologies. Sites identified in the previous assessment have been reassessed in terms of their typology and reclassified where necessary.

4.8 For some of the typologies it will be useful to include sub-categories to help distinguish between different sites within the same typologies. Table 4.3 provides a list and qualifying definition of the various sub-categories:

**Table 4.3 Open Space Typology Sub-category Definitions**

Typology	Sub-category	Definition/Comment
Allotments	Statutory	These are allotments which are on land owned by the local authority.
	Community	These are allotments which are on land which is often privately owned by an individual, collective or community organisation.
	Community food growing	Includes sites such as urban farms or collective community sites.
Natural and semi-natural greenspace	Natural and semi natural	Naturally or semi-naturally vegetated site but are not woodlands, forests or heavily treed areas.
	Woodland	Sites which are mostly covered by trees.
Outdoor sports facilities	MUGAs & Sports Courts	Multi-Use Games Area – marked out courts for a range of sports/games including many balled games (e.g. Netball, basketball, tennis etc). These are usually hard surfaced courts.
	Outdoor Gym	A site where there is dedicated outdoor gym equipment.
	Golf Course	A site which has been laid out as a formal golf course, a golf driving range or pitch and putt.
	School Playing Field / School Grounds	A site which is connected to a school building may include a grassed playing field, sports courts, hard surfaced playgrounds and wider school grounds which may be landscaped.
	Playing Field / Recreation Ground	An informal playing field not necessarily specifically laid out for any particular sport. Such sites often consist of relatively flat, grassed areas of open space.

**Table 4.3 Open Space Typology Sub-category Definitions**

Typology	Sub-category	Definition/Comment
	Sports Pitch	A more formal sports pitch or sport ground which is specifically laid out for a particular sport or number of sports (e.g football, cricket, rugby, bowls etc). Often consist of level, grassed areas of open space, but may also include 3D pitches, astroturf.
Provision for children and young people	Doorstep Playable Space / LAP	Specifically provided to provide for more innovative use of small local spaces for younger children. Has some synergy within Local Areas for Play (LAPs) – aimed at very young children.
	Local and Neighbourhood Playable Space / LEAP	Provide, on a smaller and more limited scale, the same diverse and inclusive offer of provision as the Distention spaces as outlined below. Has some synergy with Locally Equipped Areas for Play (LEAPs) – aimed at children who can go out to play independently.
	Destination Playable Space	Provide a diverse and inclusive offer aimed at all ages and needs from very young children, children who can play independently and older children/young people. Such sites are often larger in size and scale and may be co-located within another type of open space such as a Park or Recreation Ground.
	BMX/Skate Parks	Designated areas for BMX bikes and other wheeled pursuits e.g. skate boards etc. Usually hard surfaced with a variety of ramps and/or obstacles.

### Area Analysis Geography and Size Site Threshold

4.9 It is important to set out the different geographical areas which will be used in the analysis of the data. Many authorities use wards as the analysis areas as demographic data is readily available at this level and can be used in the calculation to assess the quantity of provision – i.e. looking at whether the amount of provision in an area is adequate compared with its population.

4.10 However, there can be issues with using ward area geography. The former PPG17 guidance states that *“ward boundaries are essentially arbitrary and very few local communities identify with them...In addition, a ward can appear to be poorly provided but have very good provision just outside its boundary. It is therefore better to use clearly identifiable neighbourhoods, separated from adjoining areas by physical barriers.”* This approach can help to ensure more strategic thinking about the provision of space for each community, but population data is not necessarily available at a neighbourhood level and therefore calculating provision per proportion of the population could be difficult.

4.11 The Core Strategy sets out broad spatial sub-areas and settlement areas which can be used as the geographical areas for the analysis of the provision of open space. Population data is not readily available for these areas but an estimate of the population in these areas can be made using the 2011 Census Output Area population weighted centroids data. Although this is not as accurate as using ward area geography it will mean that open space provision is considered at a settlement level which is more appropriate in terms of looking at the needs of the population. These centroids represent how the population is distributed within each of the Output Areas summarised by a population figure at a single spatial point. The

population centroids which fall within each of the settlement area boundaries were selected using GIS software and collated to give a best fit estimate of the population within each of the settlement areas. (It should be noted that small pockets of the population of the District will be scattered outside settlement area boundaries so the settlement area totals will not add up to the District wide population based on the local authority boundary).

4.12 This method has provided a set of settlement level population figures from the 2011 Census to be used in the calculation of standards and to assess provision levels. It is acknowledged that there will have been changes in the population in some areas and therefore the population figures may not be truly representative of the current position, however, they represent the best available dataset at this level.

4.13 Open space provision should also be looked at on a broader spatial scale which will help to provide a better overview of open space in each area and address issues relating to the variability between settlements. The previous Open Space Assessment and the current Playing Pitch Strategy use the parliamentary constituency boundaries as the upper spatial tier for analysis purposes. However, it is proposed that the Core Strategy sub-areas are used as the upper spatial tier in this audit as this will align better with the policies in the Local Plan.

4.14 Table 4.4 provides details of the settlement areas within each of the Core Strategy sub-areas. Population data for settlement areas and sub-areas has been collected in order to calculate the amount of provision per population for the different geographical areas.

**Table 4.4 Analysis Geography**

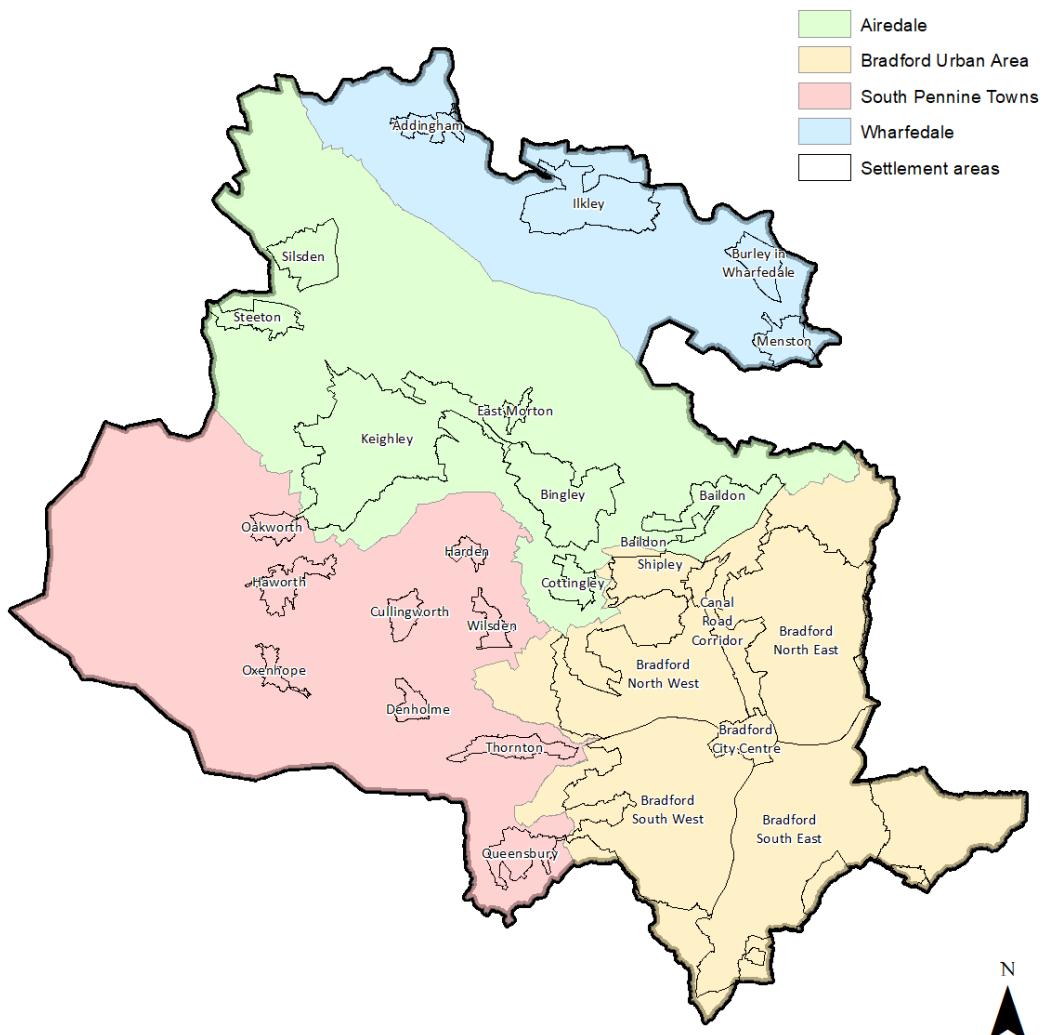

Core Strategy Sub-areas	Settlement Areas
City of Bradford including Shipley and Lower Baildon	Bradford North East Bradford North West Bradford South East Bradford South West Bradford City Centre Shipley and Canal Road Corridor Shipley
Airedale	Baildon Bingley Cottingley East Morton Keighley Silsden Steeton
Wharfedale	Addingham Burley-in-Wharfedale Ilkley Menston
Pennine Towns and Villages	Cullingworth

**Table 4.4 Analysis Geography**

Core Strategy Sub-areas	Settlement Areas
	Denholme
	Harden
	Haworth
	Oakworth
	Oxenhope
	Queensbury
	Thornton
	Wilsden

\*Please note that the Preferred Options Local Plan uses different boundaries for Shipley and the Canal Road Corridor Areas – this will be rectified in the Open Space Audit in the next iteration.

4.15 Map 4.1 below shows both the sub-area and settlement area boundaries which will be used in the assessment to help quantify the provision of open space across the District.

(c) Crown Copyright and Database Rights 2020 OS0100019304

4.16 For the purposes of the audit and in line with the definition provided above, sites that meet the following site size threshold criteria are included:

- sites of 0.2ha or above.
- sites that are less than 0.2ha and which are deemed to play a significant role in the local community – they will usually be laid out or used for sport or recreational purposes or provide a valuable visual amenity (e.g. outdoor sports/recreation grounds, equipped play areas, allotments), but may also include small civic or cemetery spaces.
- all provision for children and young people sites (these are often less than 0.2ha in size).
- sites in the Green Belt that are available for recreational/open space purposes (may include outdoor sports/recreation sites, cemeteries and burial grounds, allotments, Local Nature Reserves) and are attached to the settlement or have a notable association with a nearby settlement.

4.17 The assessment will exclude those spaces which although may provide a general amenity function and contribute to the wider network of green infrastructure, are not classified under the more formal typologies of open space. These spaces include:

- Roadside verges.
- Private residential gardens.
- SLOAP (space left over after planning) – e.g. green space within the curtilage of a building.

4.18 In addition, a separate mapping exercise has been carried out to capture small amenity spaces which are lower than the site size threshold, to help provide a complete picture of open space provision in the District (further details in Section 6 below).

## Data Collection

In order to record the relevant data for each open space site, a geo-database has been developed which can hold multiple records and a range of attribute data. The following fields have been included in the database:

<ul style="list-style-type: none"><li>• Site reference</li><li>• Historic reference (previous OSA ref and/or RUDP site ref)</li><li>• SHLAA ref (where applicable)</li><li>• Site name</li><li>• Street</li><li>• Settlement</li><li>• Core Strategy Sub-area</li></ul>	<ul style="list-style-type: none"><li>• Settlement Area</li><li>• Ward</li><li>• Parish / Neighbourhood Planning Area (where applicable)</li><li>• Site Size</li><li>• Typology (primary)</li><li>• Sub-category</li><li>• Ownership</li><li>• Public Access status</li></ul>
---	---

- 4.19 The database is linked to the Council's GIS system which has been used to map each open space site. This provides an accurate baseline of all the open space sites in the District and can be used to calculate the size of each site.
- 4.20 Sites identified in the previous Open Space Assessment and the Replacement Unitary Development Plan (RUDP) provided the starting point for the auditing of sites. In total, 1,773 sites were identified in the previous Open Space Assessment and 628 sites were designated in the RUDP. There is considerable overlap between the two datasets with most of the RUDP sites being included in the assessment. As part of the audit work these datasets were combined and the boundary and status of each site was reviewed and amended where necessary.

---

#### Steps for Auditing the Existing Supply of Open Space

- 4.21 Figure 4.1 sets out the steps which have been followed to carry out the auditing of open space sites:

Figure 4.1 Data collection and site auditing steps

## STEP 1

Set up a new GIS geodatabase to record all open space sites – this will be used to amalgamate previous open space datasets into one master dataset.

## STEP 2.1

On a site by site basis, carry out a desktop review to check the status of each site:

- Does the site still perform an open space function?
- Has the site been lost to development/an alternative use?

To do this it is important to look at the following data sources:

- Aerial photos;
- OS Mastermap basemap;
- SHLAA layer; ELR/employment layer; other monitoring layers;
- Planning history (Uniform);
- Call for Sites representations;
- Neighbourhood plans
- Historical maps.

Make a judgement as to whether the site is still open space – this can be confirmed with a site visit where necessary.

## STEP 2.2

If confirmed as open space, copy across the site polygon / draw a new polygon into the new geodatabase.

As there is considerable overlap between the RUDP open space layer and the Open Space Assessment layer it will be important to only copy the most accurate polygon across to avoid double counting of spaces. (By following this process we will ensure that only those sites that are currently open space are captured in the new shapefile/ geodatabase).

The boundary of the site should then be checked and any necessary amendments to the polygon should be made. Where possible, polygons should be snapped to OS Mastermap features.

## STEP 2.3

Update any attribute data (reference number; name; settlement; site size; typology; spatial area; data source).

## STEP 3.1

It is also important to identify any new open space. This can be achieved through an analysis of planning applications made since the previous audit, considering representations from the Call for Sites consultation as part of the Issues and Options for the Site Allocations DPD, identifying any sites designated as Millennium Greens, and a desktop survey of aerial photos and the updated OS basemap and OS Greenspace layer for each settlement area.

## STEP 3.2

Where new sites have been identified these need to be plotted on the GIS layer and the relevant attribute data added.

## Setting Local Standards

4.22 It is important to ensure that the District's communities have sufficient provision and access to open space, and that developers are able to determine the amount of open space that should be provided in new developments. This Open Space Audit report has developed a set of local standards through an analysis of the data obtained in the audit and by considering national standards, best practice and bench-marking against standards in neighbouring areas.

## Quantity Standards

4.23 To establish a local set of open space quantity standards for Bradford consideration should first be given to the baseline level of provision in the District per proportion of the population. This helps to identify the average provision levels of different types of open space across the District. Using the quantity findings from the audit and the population figures from the Census a calculation is performed to work out the amount of provision per 1,000 of the population for each typology of open space.

4.24 Secondly, a comparison with the national open space quantity standards should be made to identify any specific local anomalies or where there are notable differences. The Fields in Trust (formerly the National Playing Fields Association) set out up-to-date guidance on recommended national provision standards for a number of open space typologies in their document: Guidance for Outdoor Sport and Play – Beyond the Six Acre Standard.

4.25 Thirdly, the local standards of neighbouring authority areas are used to compare and bench-mark the proposed standards for Bradford in order to provide a sense-check and ensure consistency of provision between similar areas.

4.26 Appendix 1 sets out the average provision rates, the national standards and neighbouring local authorities' standards and provides a narrative to explain the reasoning for the choice of the local standard for each typology.

4.27 Table 4.5 sets out a summary of the local open space quantity standard for Bradford by typology.

**Table 4.5 Bradford Open Space Quantity Standards**

Typology	Nationally set quantity standards (Fields in Trust, Allotment Association) (ha/1,000 population)	Average provision (ha/1,000 population) in Bradford District (based on findings of the 2020 audit)	Bradford Standard
Allotments	0.23	0.17	0.20
Amenity greenspace	0.60	0.40	0.50
Cemeteries	No national standard	0.25	0.25
Civic spaces	No national standard	0.01	0.01
Green and Blue corridors	No national standard	0.17	0.20
Natural and semi-natural greenspace	1.80	0.90	1.00
Open land in settlements	No national standard	0.40	0.45
Outdoor sports facilities	1.60	2.27	1.80
Parks and gardens	0.80	0.89	0.90
Provision for children and young people*	0.25ha	0.03ha (or 0.38 sites per 1,000 pop)	(0.4 sites per 1,000 pop)

\*The resulting standard for Provision for Children and Young People is expressed as the number of sites per 1,000 of the population rather than the area.

4.28 These local standards will be used in the analysis of the audit results and applied to each settlement area for each of the typologies. This will show whether each settlement area is meeting the recommended standards or not, and highlight the priorities for where additional provision is needed. The standards for each typology are applied to the population of each settlement to work out the requirement level of open space provision. The actual level of provision is then subtracted from the requirement to indicate where there is a surplus or deficit of each type of open space in each settlement.

4.29 However, the quantity standards should not be seen as maximum provision levels and where provision is greater than the standards this does not automatically mean that there is a surplus of open space. Surpluses in one area, or of a particular typology, may counteract deficiencies in another and this can help to ensure that there is sufficient provision and a balance of provision across the District.

## Accessibility Standards

4.30 As well as ensuring there is an adequate quantity of open space provision for residents, it is also important to consider the accessibility of sites in relation to residential areas.

4.31 In order to set localised accessibility standards for the different types of open space consideration has been given to: i) the national standards established by the Fields in Trust; ii) the Accessible Natural Greenspace Standards (ANGSt) developed by Natural England; iii) the findings from the Open Space Needs and Demands

Assessment which look at the distances people are prepared to travel to access certain types of space; and iv) neighbouring authorities' accessibility standards.

4.32 Consideration must also be given to the nature and form of the built environment in Bradford. Many of the inner city areas, as well as the urban cores of the towns and villages, often contain areas of high density terraced housing which leaves little room for private gardens or areas of public open space. As such it is often difficult for these areas to meet the aspirational national standards. A local approach allows for a more bespoke set of standards to be established to take account of local circumstances. However, caution must still be applied as not every area will be representative of the average position.

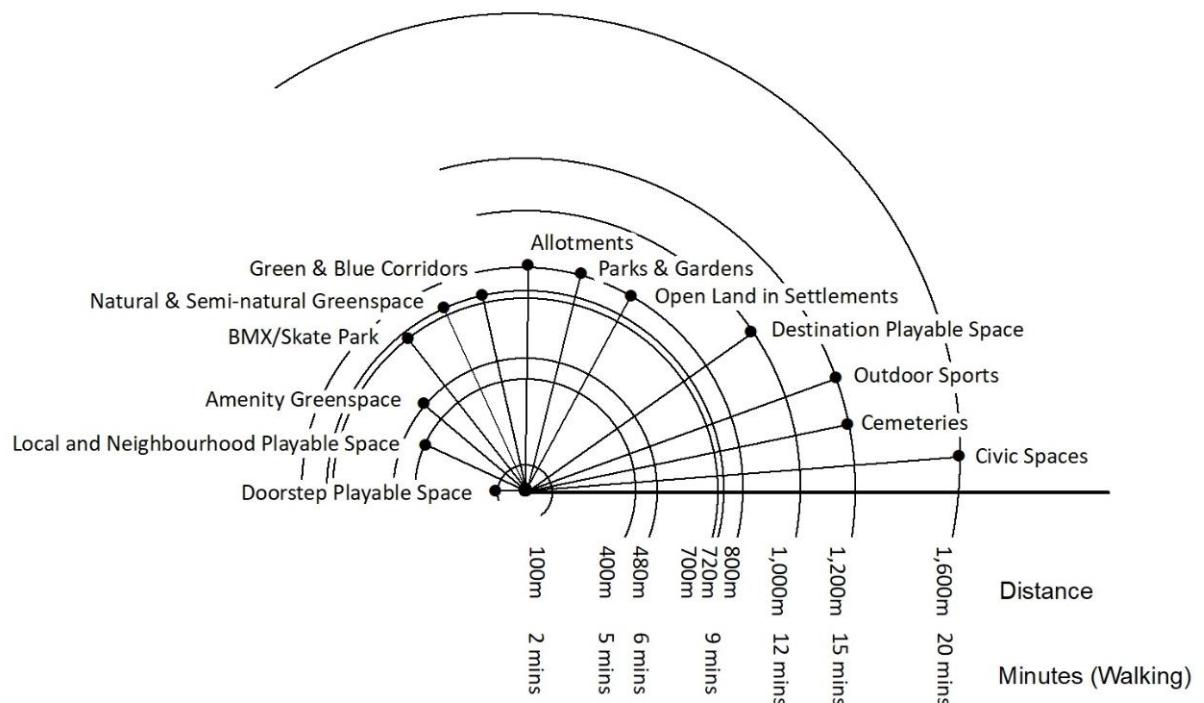

4.33 Appendix 1 provides details of the various accessibility distances for each type of open space and draws conclusions regarding the most appropriate option for Bradford. These local open space accessibility standards are set out in Table 4.6 below and are shown as a distance and walking time. Figure 4.2 provides a diagrammatic representation of the standards to enable easy comparison by typology.

**Table 4.6 Bradford Open Space Accessibility Standards**

Typology	Distance from residential property to open space site (metres)	Minutes walking
Allotments	800	10
Amenity greenspace	480	6
Cemeteries	1,200	15
Civic spaces	1,600	20
Green and Blue corridors	720	9
Natural and semi-natural greenspace	720	9
Open land in settlements	800	10
Outdoor sports facilities	1,200	15
Parks and gardens	800	10
Provision for children and young people:		
Doorstep Playable Spaces (Similar to LAP (Local Area Play))	100	2
Local and Neighbourhood Playable Spaces (Similar to LEAP (Locally Equipped Area for Play))	400	5
Destination Play (Similar to NEAP (Neighbourhood Equipped Area for Play))	1000	12
BMX /Skate Parks	700	9

4.34 The walking time/distance figures are based on the Fields in Trust accessibility guidelines:

- 250m = 2-3 minutes' walk
- 400m = 5 minutes' walk
- 800m = 10 minutes' walk
- 1,200m = 15 minutes' walk
- 1,600m = 20 minutes' walk

**Figure 4.2 Accessibility Standards by Typology**

4.35 The relevant accessibility standards have been applied to each site within the GIS system and a buffer zone has been created around each site to help highlight the areas that are within and not within an accessible distance of the different types of space. Within the typology analysis below a map is provided to show the distribution of sites along with the relevant buffer zone to demonstrate compliance with the accessibility standards.

## 5. Assessment Results

5.1 This section presents the findings of the audit work and is divided into three sections: i) overall district-wide assessment results; ii) typology results and analysis; iii) settlement results and analysis. Comparison has not been made between the latest audit results and those in the 2006 assessment as the geography for reporting the results has changed and there has also been a number of changes in the typologies assigned to sites compared to the previous study.

### District-wide Results

5.2 Each open space site has been mapped in the GIS database, a primary typology assigned and the area of each site automatically calculated. Appendix 2 provides a full list of all the sites included in the audit. Table 5.1 presents the overall amount of open space (in hectares) and number of sites by typology in the District.

**Table 5.1 Total amount of open space by typology**

Typology	Amount of open space (ha)	No. sites
Allotments	87.38	87
Amenity greenspace	192.46	291
Cemeteries	129.11	83
Civic spaces	4.73	13
Green and Blue corridors	88.20	46
Natural and semi-natural greenspace	456.36	303
Open Land in Settlements	204.57	69
Outdoor sports	1,151.30	558
Parks and gardens	449.98	49
Provision for children	17.32	194
<b>Total</b>	<b>2,781.41</b>	<b>1,693</b>

5.3 The results show that the typology with the greatest coverage and number of sites is the outdoor sports typology. This typology includes a variety of different assets including formal sports pitches, general recreation grounds and playing fields, golf courses (which account for a large proportion of the area total), Multi-Use Games Areas (MUGAs) and outdoor gyms. The three typologies with the next highest coverage are: Natural and Semi-natural Greenspace (456.36ha), Parks and gardens (449.98) (includes St Ives Country Park and accounts for a large proportion of the area total), and Open Land in Settlements (204.57ha) (this is a Bradford specific typology and includes areas of farmland within the settlement boundary).

5.4 Table 5.2 provides details of the amount and number of sites of open space within each of the individual settlement areas as identified in the Core Strategy. As indicated in the methodology, open space sites are only mapped where they fall within a settlement boundary or where they adjoin a settlement boundary and/or provide an important facility for the local community.

**Table 5.2 Total amount of open space by settlement**

Settlement	Population	Amount of open space (ha)	No. sites
<b>City of Bradford, Shipley and Lower Baildon</b>			
Bradford NE	89,668	320.18	240
Bradford NW	75,023	257.78	157
Bradford SE	58,822	350.37	215
Bradford SW	95,188	298.53	211
Bradford City Centre	3,532	7.63	15
Shipley Canal Road Corridor	1,386	57.42	41
Shipley	17,912	99.21	80
<b>Airedale</b>			
Baildon	16,292	198.67	74
Bingley	17,726	304.84	73
Cottingley	4,767	62.75	19
East Morton	1,309	36.32	10
Keighley	49,031	297.18	172
Silsden	7,638	53.69	28
Steeton	4,167	17.91	35
<b>Wharfedale</b>			
Addingham	3,172	66.61	25
Burley-in-Wharfedale	6,247	22.21	20
Ilkley	14,394	107.57	65
Menston	4,369	9.87	15
<b>South Pennine Towns and Villages</b>			
Cullingworth	2,596	23.08	19
Denholme	2,715	22.38	20
Harden	1,600	5.39	8
Haworth	5,826	33.13	36
Oakworth	3,804	19.63	20
Oxenholme	1,872	11.10	25
Queensbury	8,848	50.24	28
Thornton	5,822	36.56	23
Wilsden	3,924	11.21	19
<b>Totals</b>	<b>507,650</b>	<b>2,781.41</b>	<b>1,693</b>

5.5 Table 5.2 shows the top five settlements with the largest amount of open space and greatest number of sites are: Bradford South East, Bradford North East, Bingley, Bradford South West and Keighley. This is possibly unsurprising given that these are some of the larger settlement areas in the District and it is expected that they would have a considerable amount of open space in relation to their size and the amount of the population living in these areas.

**Table 5.3 Total amount of open space by Core Strategy sub area**

Core Strategy Sub-Area	Population	Amount of open space (ha)	No. sites
City of Bradford, Shipley and Lower Baildon	341,531	1,391.11	959
Airedale	100,930	971.34	411
Wharfedale	28,182	206.25	125
South Pennine Towns and Villages	37,007	212.71	198
<b>Totals</b>	<b>507,650</b>	<b>2,781.41</b>	<b>1,693</b>

5.6 Table 5.3 provides a summary of the total amount of open space (in hectares) and number of sites for each of the four Core Strategy sub-areas. It also provides the population for each area. The results show that the Regional City of Bradford sub-area has the greatest amount of open space, both in terms of area and number of sites. This area contains two thirds of the District's population but only accounts for 50% of the open space in terms of area. Airedale has the next largest proportion of the population with 20% but contains nearly 35% of the open space provision. Residents in Airedale therefore have a larger amount of open space per person than residents in the Bradford sub-area. Wharfedale and the South Pennine Towns and Villages have notably lower levels of identified open space at around 7% of the district total. They are also resident to less of the District's population accounting for 6% and 7% respectively.

**Table 5.4 Total amount of open space by settlement hierarchy tier**

Settlement Hierarchy	Population	Amount of open space (ha)	No. sites
Regional City	341,531	1,391.11	959
Principal Towns	81,151	709.58	310
Local Growth Centre	37,091	190.46	149
Local Service Centre	47,877	490.25	275
<b>Totals</b>	<b>507,650</b>	<b>2,781.41</b>	<b>1,693</b>

5.7 Table 5.4 provides a summary of the total amount of open space (in hectares) and number of sites for each of the settlement hierarchy tier groups. It also shows the combined population for each hierarchy level. The results demonstrate that the regional city has the largest amount of open space and number of sites. The Principal Towns have the next highest amount of open space and this is relative to the proportion of the District's population.

5.8 Map 5.1 provides an overview of the location and distribution of all the open space sites which have been identified and assessed as part of the audit. This map helps to show, at a strategic level, where there are concentrations of open space within the District's settlements. But more fundamentally it also helps to show those areas within settlements where there are poor levels of provision. This is picked up in more detail for each settlement area in the Settlement Analysis section below. But some of the key observations include, that there are:

- parts of the Bradford Urban area with limited open space provision and an uneven distribution, which is particularly notable in North East Bradford;

- parts of central Keighley with limited provision;
- poor distribution of open space within certain settlements such as Ilkley, Thornton and Burley-in-Wharfedale.

5.9 Map 5.2 provide an overview of the location and distribution of all the open space sites in the District classified by their typology. This helps to show whether the different types of open space are evenly spread throughout the settlements in the District or whether there are clusters of certain types of spaces in certain areas.

5.10 Some of the key observations include:

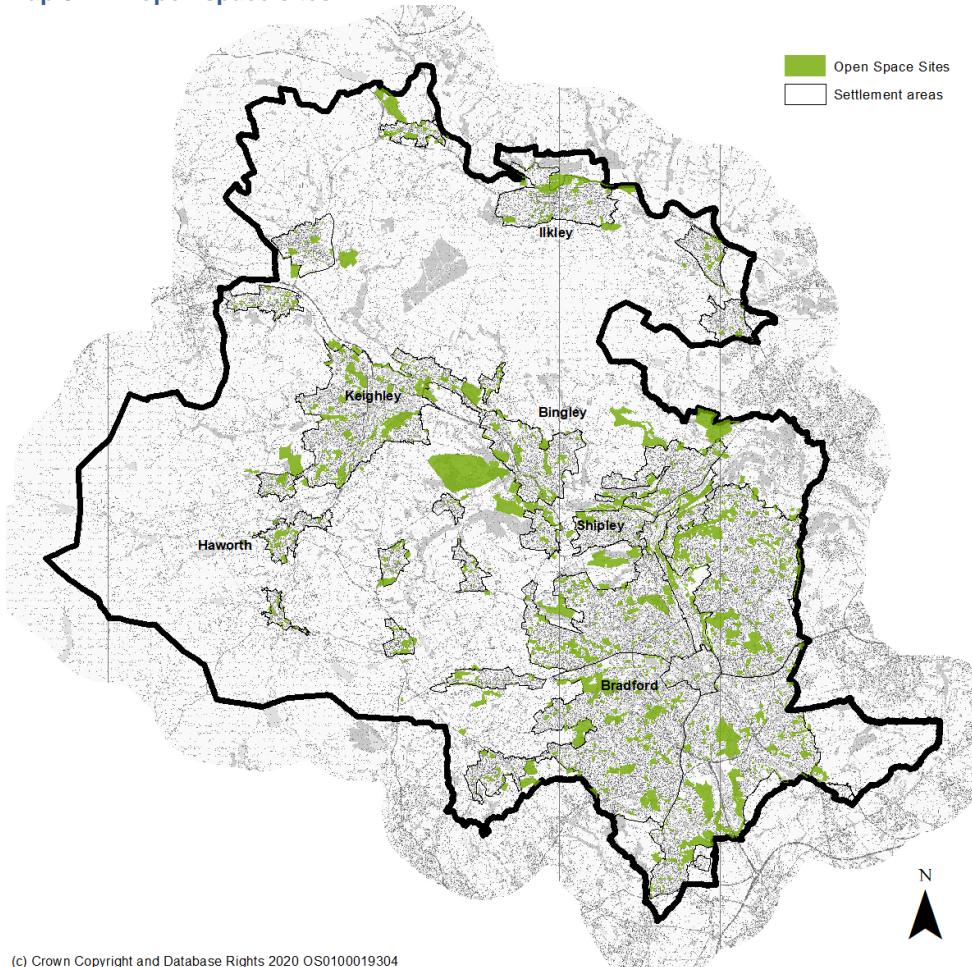

- Uneven distribution of Play Area sites, particularly in the Bradford Urban area, which means some residential areas have poor access to such provision.
- Overall good distribution of Outdoor Sports sites with exceptions in Bradford South East and the City Centre.
- Reasonable distribution of Parks and Garden sites but some notable absences, particularly in some parts of Bradford North East and South East, Addingham, Baildon, Cullingworth and Thornton.
- Uneven distribution of Natural and Semi-natural Greenspace sites and some clustering of sites which make up a network of sites, most obvious along the Aire Valley corridor.

5.11 Table 5.5, Table 5.6 and Table 5.7 provides a summary of the audit data in terms of the amount of open space (by site area and number of sites) by typology for each settlement, sub-area and settlement hierarchy tier.

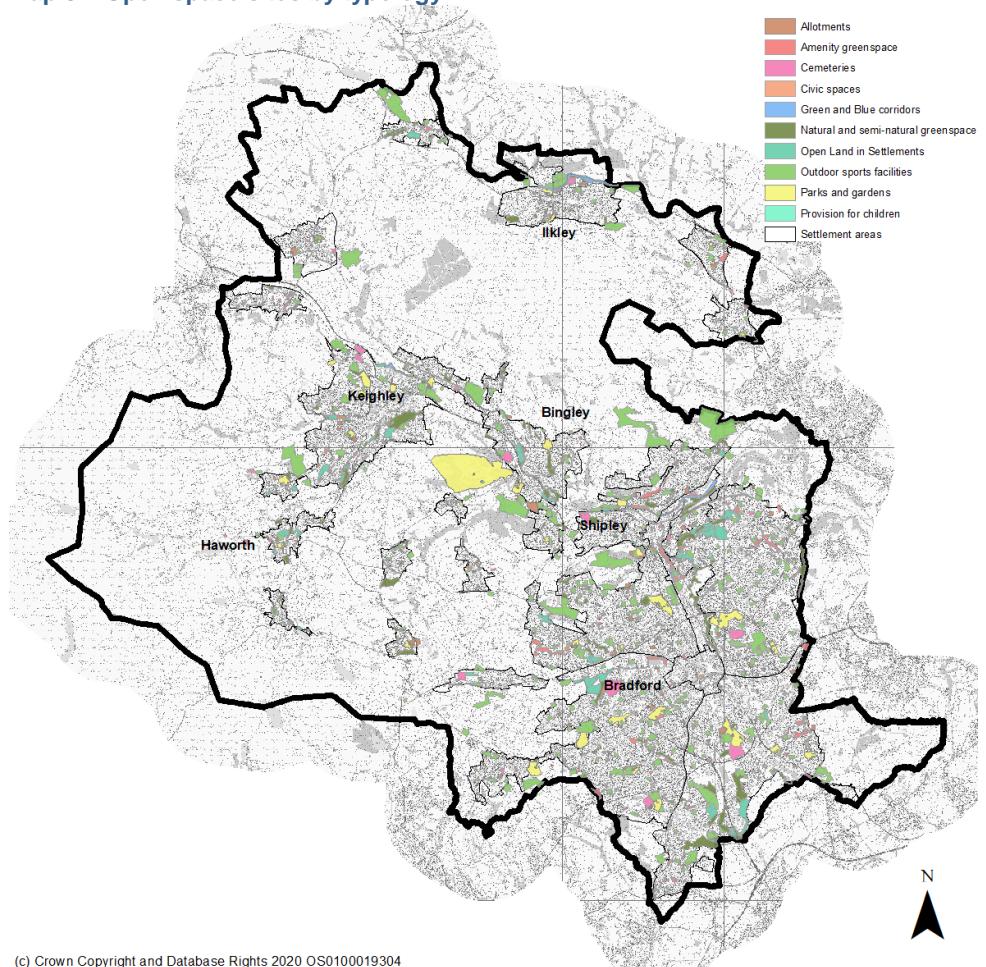

5.12 Table 5.8, Table 5.9 and Table 5.10 shows the deviation from the standard provision figure for each typology by settlement, sub-area and settlement hierarchy tier. To calculate the deviation, the relevant standard is applied to the population of the settlement to determine the required level of provision of each typology. This is then subtracted from the actual amount of provision of typology in the settlement area. If the resulting figure is positive, then this indicates a sufficient level of provision to meet the needs of the population. If the resulting figure is negative, then this indicates that a deficiency of provision may exist.

5.13 Full analysis of the audit results and performance against the standards is provided in the Typology Analysis section below.

Map 5.1 All open space sites

## Typology Analysis

- 5.14 The section below provides the analysis for each of the different typologies of open space. It sets out the amount and number of sites under each typology in each settlement area, provides details of the performance against the quantity standards in each area for the particular typology (identifying those areas where provision is above the standard or where there are deficits in provision), and looks at the accessibility of sites under each typology to highlight those areas which do not have adequate access to open space.
- 5.15 Commentary is provided to support the findings and data that is presented to help explain differences in provision and the spatial context.

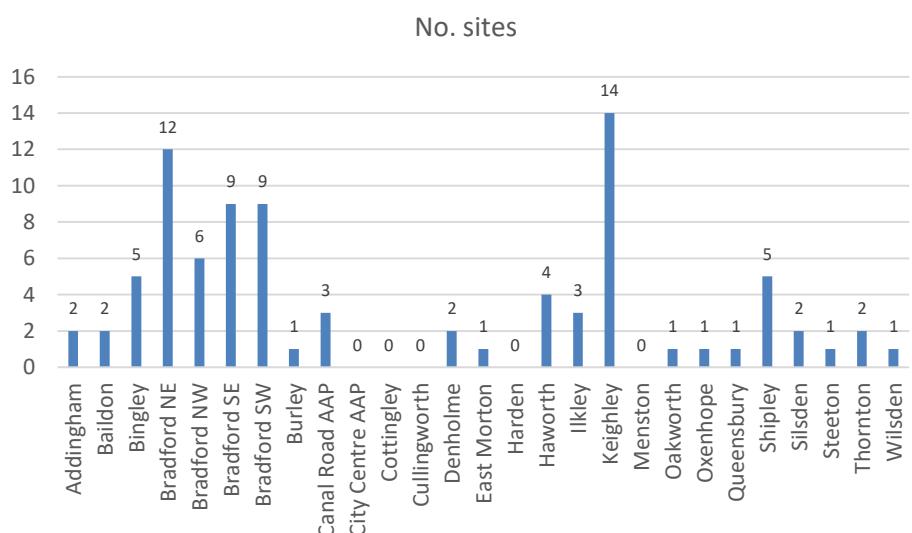

## Allotments

5.16 The allotments typology consists of sites made available for people to grow their own food or as part of a community garden, urban farm or small holding. They help to promote sustainable growing practices, as well as supporting the physical health and well-being of plot holders, allowing them to eat healthier diets and also providing them with a form of exercise. Allotments can also contribute to improved mental health and well-being and support social inclusion within neighbourhoods.

**Figure 5.1 Amount of Allotments (hectares) per settlement area**

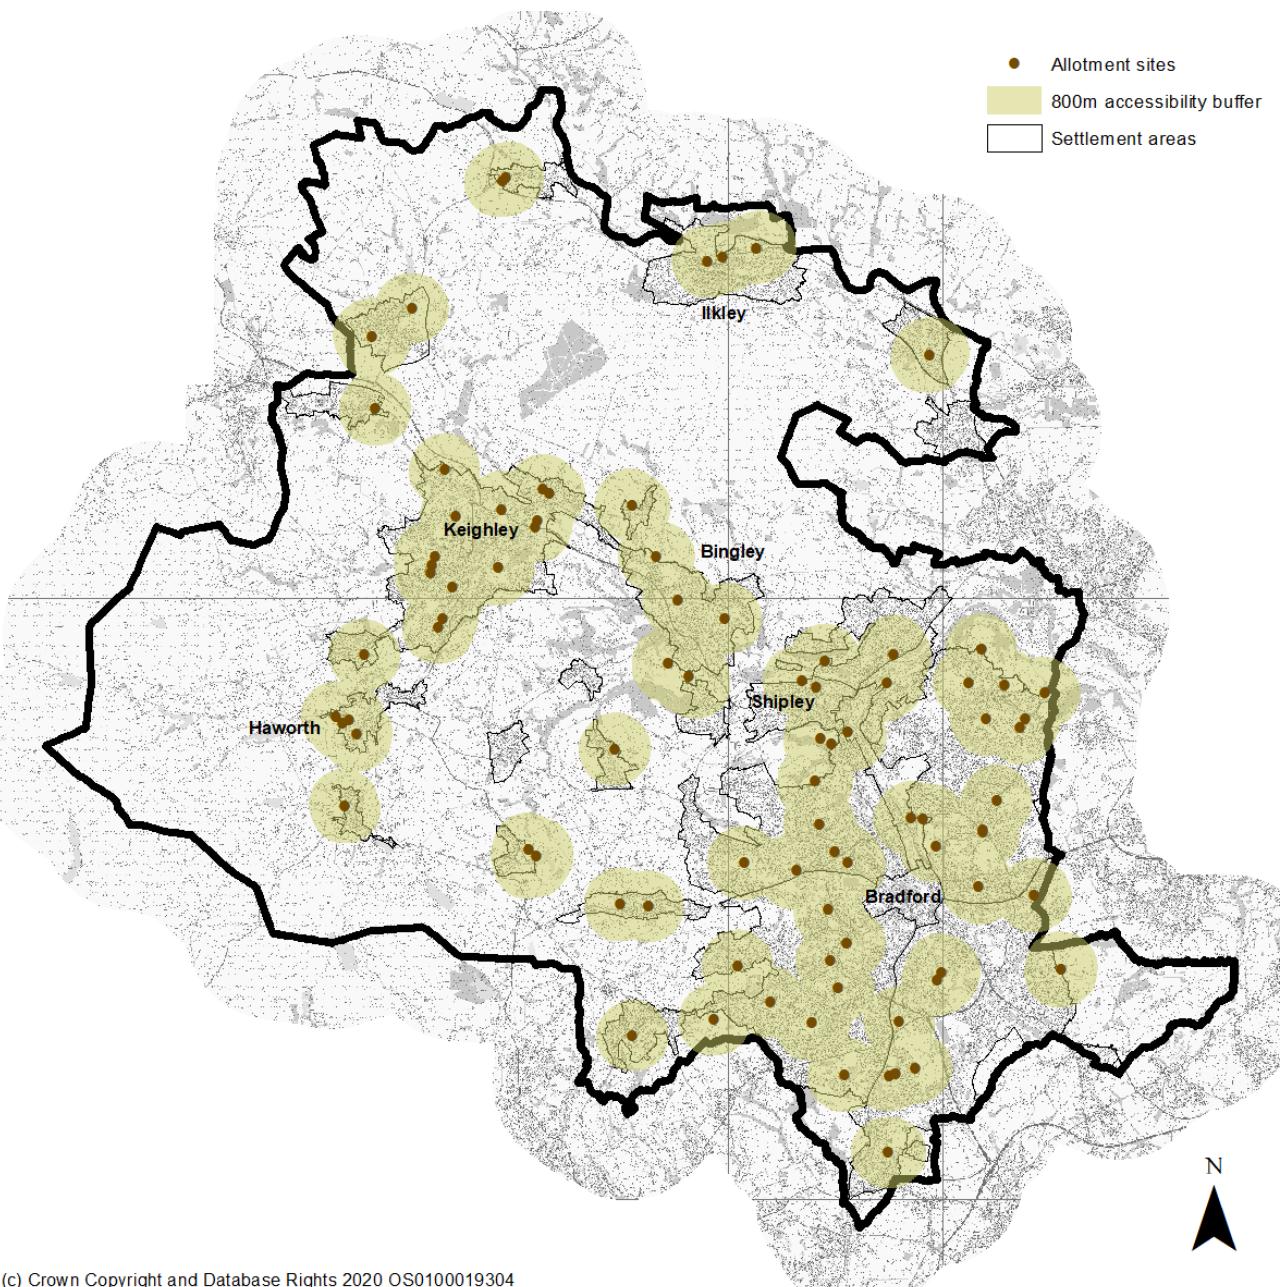

**Figure 5.2 Number of Allotment sites per settlement area**

**Table 5.11 Allotments – Performance against standards and priority for provision**

Settlement	Population	Bradford Open Space Assessment Standards			Priority for increased provision
		Requirement @0.20ha /1000 pop	Actual Provision	Deviation from standard	
<b>City of Bradford, Shipley and Lower Bailedon</b>					
Bradford NE	89,668	17.93	7.00	-10.93	HIGH
Bradford NW	75,023	15.00	7.54	-7.47	HIGH
Bradford SE	58,822	11.76	8.31	-3.45	MODERATE
Bradford SW	95,188	19.04	6.69	-12.34	HIGH

<b>Sub-area</b>	<b>100,930</b>	<b>20.19</b>	<b>31.67</b>	<b>11.49</b>	<b>LOW</b>
<b>Wharfedale</b>					
Addingham	3,172	0.63	1.41	0.78	LOW
Burley-in-Wharfedale	6,247	1.25	2.27	1.02	LOW
Ilkley	14,394	2.88	2.76	-0.12	MODERATE
Menston	4,369	0.87	0.00	-0.87	HIGH
<b>Sub-area</b>	<b>28,182</b>	<b>5.64</b>	<b>6.44</b>	<b>0.80</b>	<b>LOW</b>
<b>South Pennine Towns and Villages</b>					
Cullingworth	2,596	0.52	0.00	-0.52	HIGH
Denholme	2,715	0.54	6.16	5.61	LOW
Harden	1,600	0.32	0.00	-0.32	HIGH
Haworth	5,826	1.17	1.62	0.46	LOW
Oakworth	3,804	0.76	0.23	-0.53	HIGH
Oxenhope	1,872	0.37	0.40	0.02	MODERATE
Queensbury	8,848	1.77	0.34	-1.43	HIGH
Thornton	5,822	1.16	0.94	-0.23	HIGH
Wilsden	3,924	0.78	0.51	-0.27	HIGH
<b>Sub-area</b>	<b>37,007</b>	<b>7.40</b>	<b>10.20</b>	<b>2.80</b>	<b>MODERATE*</b>

\*Although there is a positive deviation from the standard – this is accounted for by the large areas of small holdings located in Denholme which skews the results for the sub-area. Six out of the nine settlements in the sub-area have a negative deviation from the standard (i.e. a deficit of allotment space and are a high priority for increased provision) and therefore the sub-area as a whole has a moderate priority for increased provision.

**Map 5.3 Accessibility to and distribution of allotments**

#### Quantity Analysis

- 5.17 There are a total of 87 allotment sites within the settlement areas of the District, which cover a total area of 87.38ha.
- 5.18 In terms of the distribution of allotment provision, Figure 5.2 shows that all settlement areas have at least one allotment site except for Bradford City Centre, Cottingley, Cullingworth, Harden and Menston which have no allotment provision.
- 5.19 Keighley has the highest number of allotment sites (14 sites) covering a total area of 11.94ha. This is closely followed by Bradford NE (12 sites), Bradford SW (9 sites) and

Bradford SE (9 sites). It is perhaps not surprising that these settlement areas have the highest provision of allotments considering the geography that they cover and their greater population levels compared to some of the smaller settlements. These areas also have larger proportions of older higher density housing with limited garden space and where it was more common place for local authorities to provide allotments to supplement the outdoor space for people living in these properties.

### Accessibility Analysis

5.20 Map 5.3 shows the distribution of allotments sites across the District as well as the accessibility to allotments based on the 800m distance standard depicted as a buffer zone around each allotment site (khaki coloured shading around each allotment site). This buffer represents a 10-minute walking distance from each allotment site (further details on accessibility standards is provide in Section 4 and Appendix 1).

5.21 The map demonstrates that the population of most settlement areas have reasonable access to an allotment site, with the majority of residential areas being within 800m of an allotment site (as the crow flies). However, there are some notable areas which do not have good access to allotment provision. Those settlement areas where there is no provision (City Centre, Cottingley, Cullingworth, Harden and Menston) clearly have poor access to allotments, although in Cottingley there is provision in neighbouring Bingley which is accessible to some residents.

5.22 There are also parts of the Bradford Urban area, Baildon, Shipley, Ilkley, Steeton and Haworth (Cross Roads) which are not within an accessible distance of an allotment site. Although some of these areas are highly industrialised and do not have a resident population there are other more residential areas without good access to allotments. This is particularly notable in parts of SE, NE and NW Bradford. SE Bradford has the fourth highest number of allotments and third highest area coverage, but the distribution of these allotments means that there are some residential areas which do not have easy access to these sites. This is particularly acute in Bierley and parts of Holme Wood in SE Bradford, round Swain House in NE Bradford and the Sandy Lane and Chellow Heights area of NW Bradford.

### Standards Analysis

5.23 Table 5.11 shows the performance of each settlement area against the allotment provision standards (see Section 4 and Appendix 1 for further details on setting the quantity provision standards). A priority level for increased provision has been assigned to each settlement and sub-area based on the levels of deviation from these standards.

5.24 It shows that the Bradford NE, NW, SE and SW settlement areas of the Regional City all have a negative deviation from the requirement based on the standard compared to the actual provision in these areas (i.e. a deficit of allotment open space in those areas for the size of the population). There is some variation between these settlements in terms of the degree of the deviation. Bradford SE has a smaller deficit of allotment space compared to the three other settlement areas and therefore has a moderate priority for increased provision. Bradford NE, NW and SW all have a high priority for increased provision and opportunities for additional provision need to be explored.

5.25 In Bradford City Centre there is currently no allotment provision and due to the low resident population in this area the deficit is only 0.71ha against the standard and therefore represents a moderate priority for increased provision. Although given the likely levels of growth in the future, the priority for additional provision is likely to increase.

5.26 Both Shipley and the Shipley and Canal Road Corridor area have a good level of allotment provision, performing well above the standard (an additional 2.02ha and 3.65ha of provision respectively). These areas therefore have a low priority for additional provision in terms performance against the standards.

5.27 In settlements in both Airedale and Wharfedale there are reasonably good provision levels against the standard with only Cottingley and Menston considered as high priorities for additional provision. Baildon, Steeton and Ilkley all have a slight deficit in provision against the standard and these areas would also benefit from additional provision where opportunities arise. The remaining settlements in these sub-areas see provision levels above the recommended standard amount for the size of population and therefore are a lower priority for further provision.

5.28 The picture is slightly more varied in the settlements of the South Pennine Towns and Villages. Six of the nine settlements see a deficit in provision and again the extremes of the deficit vary. For example, Queensbury has a notably high deficit of 1.43ha against the standard and this suggests a high priority for increased provision. Cullingworth, Harden, Oakworth, Thornton and Wilsden also see deficits and should be considered a high priority for increased provision – especially Cullingworth and Harden where there are no existing allotment sites.

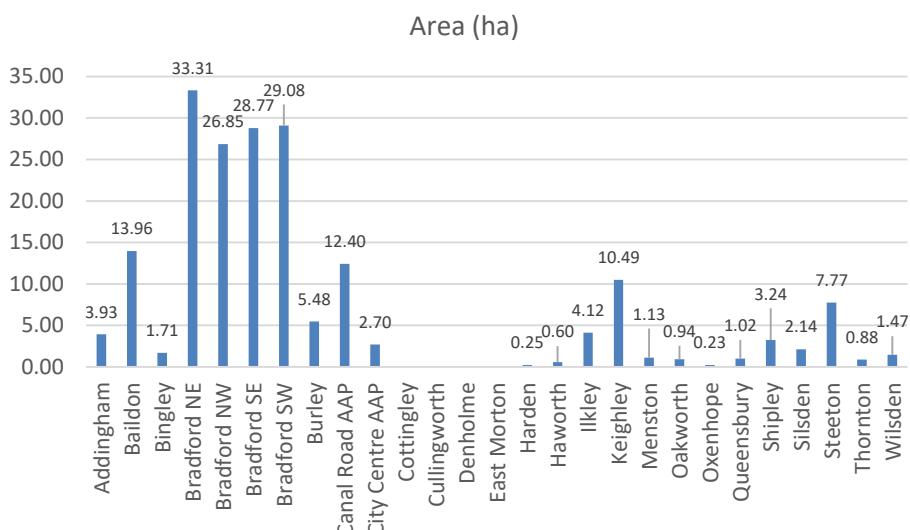

5.29 Denholme, Haworth and Oxenhope all see provision levels above the recommended standard. However, Oxenhope is only just above the standard and any increase in population due to further growth of the settlement may mean that additional provision will be required in the future. It should also be noted that the provision figure for Denholme includes a large area of small holdings, which although form part of the definition of the allotment typology, could be seen to skew the level of provision of more traditional allotment sites in this settlement.

## Amenity Greenspace

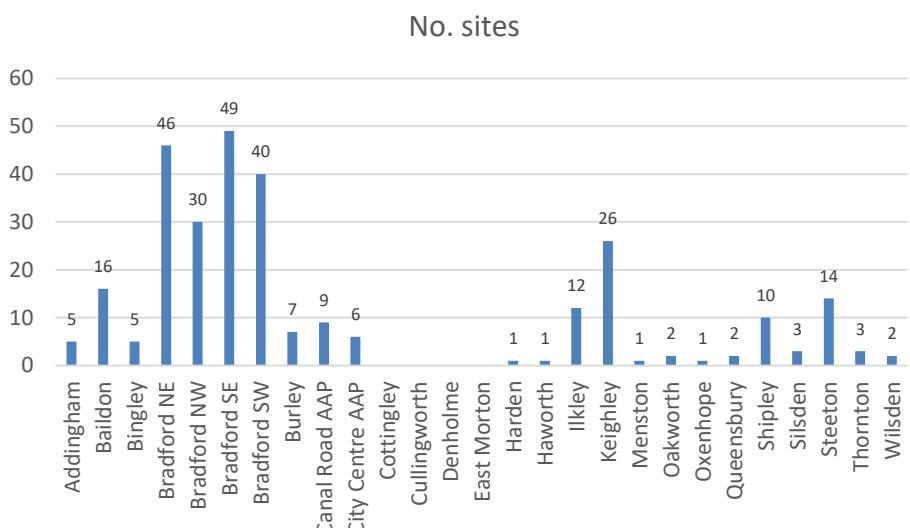

5.30 Amenity Greenspaces provide areas for informal recreation activities close to home or work. This may include dog walking, spaces for informal ball games, or a place to sit and experience the outdoors.

5.31 Amenity Greenspaces can help to enhance the appearance of residential and other areas, providing visual amenity and natural breaks between developments. They often consist of grassed areas with benches, planting and landscaping, pathways and litter bins. They can vary in levels of maintenance with some spaces cared for more formally and other being wilder in nature.

**Figure 5.3 Amount of Amenity Greenspace (hectares) per settlement area**

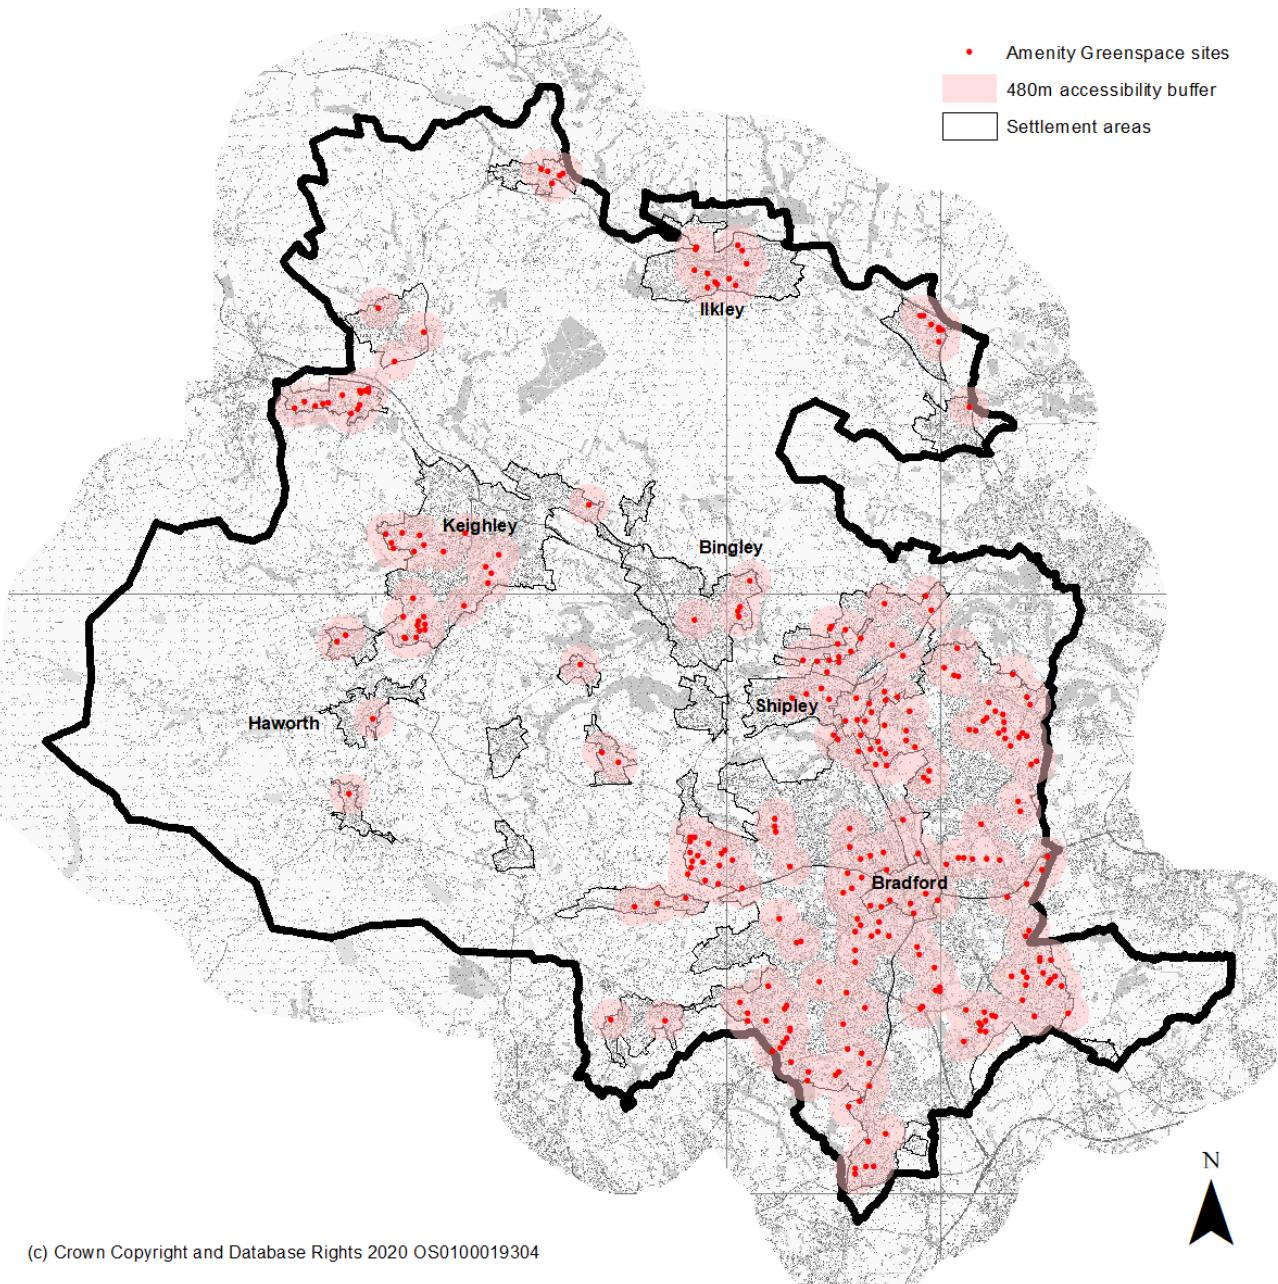

**Figure 5.4 Number of Amenity Greenspace sites per settlement area**

**Table 5.12 Amenity Greenspace – Performance against standards and priority for provision**

**Map 5.4 Accessibility to and distribution of amenity greenspace**

#### Quantity Analysis

5.32 There are 291 sites classified under the Amenity Greenspace typology in the District and these account for a total 192.46ha. Figure 5.3 shows that there is considerable variation in the amount of Amenity Greenspace which is present in each of the settlement areas of the District. It indicates that sites classified under this typology are present in most settlements.

5.33 The settlement area with the highest amount of Amenity Greenspace is NE Bradford covering 33.31ha over 46 sites. Unsurprisingly the other three areas of the Bradford Urban area have the next highest amount of Amenity Greenspace with 29.08ha in

Bradford SW, 28.77ha in Bradford SE and 26.85ha in Bradford NW. It is interesting to note that Bradford SE actually has more sites than Bradford NE suggesting that there is a greater number of smaller Amenity Greenspace sites in this area.

5.34 Within the rest of the District the amount and number of Amenity Greenspace sites is similarly linked to the size and status of each settlement with greater proportions of this typology being present in the Principal towns of Keighley and Ilkley compared to the local growth and service centres. Most of the small towns and villages have some level of Amenity Greenspace provision but as Figure 5.4 shows it is often limited to just one or two sites.

5.35 Baildon and Steeton both have notably large amounts of Amenity Greenspace in relation to their size. Conversely Bingley and to some extent Shipley have noticeably low amount of this typology.

5.36 There are four settlements with no Amenity Greenspace provision including: Cottingley, Cullingworth, Denholme and East Morton. These are all smaller settlements situated within the wider countryside and therefore the absence of this typology is perhaps not unusual and there are a variety of other open spaces within these settlements which may also play an amenity role.

#### Accessibility Analysis

5.37 Map 5.4 shows the distribution of Amenity Greenspace across the District. Within the Bradford Urban Area there are clusters of amenity greenspaces often associated with post-war housing estates. Conversely there is a notable absence of such spaces within parts of the city where there is a concentration of high density terraced housing. Similar patterns occur in parts of Keighley, Bingley and Shipley. The map shows a clear ring around the outer city centre in Bradford where there are no Amenity Greenspace sites and where there is also poor access to such spaces (i.e. there are areas that are not 480m or a 6-minute walk of an Amenity Greenspace site).

5.38 In Keighley and Bingley there are considerable parts of these settlements where there is more limited access to Amenity Greenspace provision. This is particularly acute in the northern parts of these settlements, however, these are more predominantly industrial areas and it is perhaps not unusual for there to be a lack of this typology as it is more often associated with residential areas.

5.39 Map 5.4 also shows that in many settlements it is often the outer residential developments on the periphery that see poor levels of access to Amenity Greenspace sites. This may be because houses in these more suburban and rural areas are more likely to have gardens and so amenity space has not been provided as part of these developments, or because the surrounding countryside offers a sense of amenity in addition to its wider Green Infrastructure functions. Equally it may be that other typologies of open space are present and provide an amenity function in addition to their primary role.

## Standards Analysis

5.40 Table 5.12 shows the performance of each settlement area against the amenity greenspace provision standards (see Section 4 and Appendix 1 for further details on setting the quantity provision standards). A priority level for increased provision has been assigned to each settlement and sub-area based on the levels of deviation from these standards.

5.41 In the Regional City sub-area the figures show that the settlement areas of NE, NW and SW Bradford, and Shipley all have a deficit of Amenity Greenspace when compared against the standard provision amount expected relative to the size of the population in those areas. The lack of this type of open space in these areas is partly related to the large areas of higher density terraced housing which when constructed did not allow for the provision of such space.

5.42 In the City Centre and the Shipley and Canal Road Corridor area, the amount of Amenity Greenspace provided is above the standard. In SE Bradford there is a very slight deficit but generally this area is well served for Amenity Greenspace. This is likely to be due to the presence of areas of green space which were included in the large areas of post-war residential development that has occurred in this area. This is particularly notable around parts of Bierley and Holme Wood.

5.43 In Airedale five out of the seven settlements have a deficit of amenity greenspace in relation to the standard. Keighley and Bingley both have noticeably high deficits indicating that the additional provision of this type of open space should be a high priority. Baildon and Steeton both have greater amounts of Amenity Greenspace compared to the standard and are of a lower priority for any additional provision. The sub-area as whole has a deficit of this type of open space and opportunities to increase the amount of this type of space should be considered in order to move towards meeting the standard.

5.44 In Wharfedale there is again a range of deviations from the standard provision figures for each of the settlements. Addingham and Burley-in-Wharfedale both see greater levels of provision compared to the standard and therefore are of a low priority for additional Amenity Greenspace. Both Ilkley and Menston have a deficit of this type of open space and therefore consideration should be given to increasing the levels of this type of open space. However, in Ilkley, it is the eastern and western edges of the settlement where the deficiencies are most notable and these areas benefit from being surrounded by open countryside and in particular Ilkley Moor which provides a level of Amenity Greenspace which is not accounted for in the provision figures. The sub-area performs positively overall for the provision of Amenity Greenspace and is a low priority for increased provision.

5.45 In the South Pennine Towns and Villages all the settlements have a deficit of Amenity Greenspace when compared to the standard level of provision expected for the size of population in these settlements. Queensbury, Haworth, Thornton, Denholme and Cullingworth all have significant deficits and therefore are a higher priority for increased provision. Although in the case of Haworth, there is a notable amount of space classed under the Open Land in Settlements typology which performs a similar role to Amenity Greenspace and therefore the priority may not be as high.

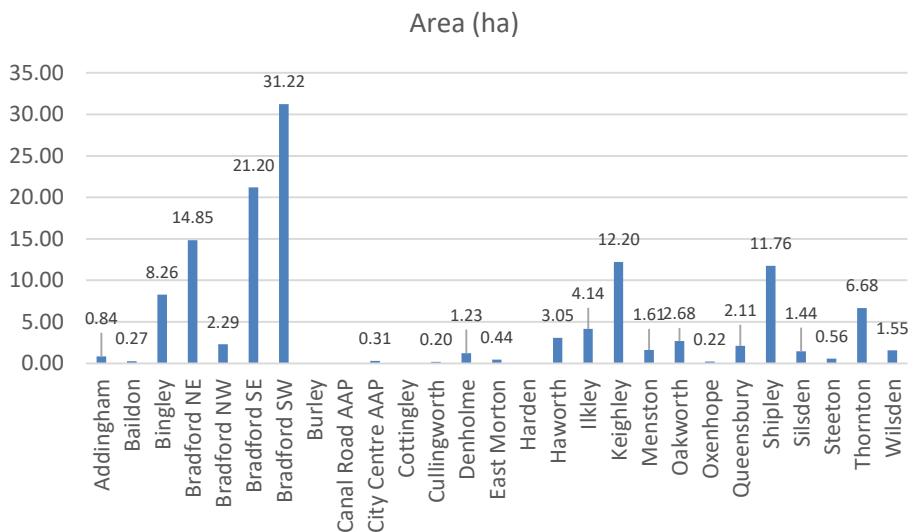

5.46 The other settlements in this sub-area also have a deficit of Amenity Greenspace but to a slightly lesser extent and therefore are of a moderate priority for increased provision. The nature of the settlements in the South Pennine Towns and Villages sub-area are that they are surrounded by, and in general are in close proximity to, the open countryside which provides a similar function to Amenity Greenspace. Therefore, although the overall priority for increased provision in this sub-area is high, it should be acknowledged that the surrounding countryside can provide an alternative to more formally identified Amenity Greenspace.

## Cemeteries

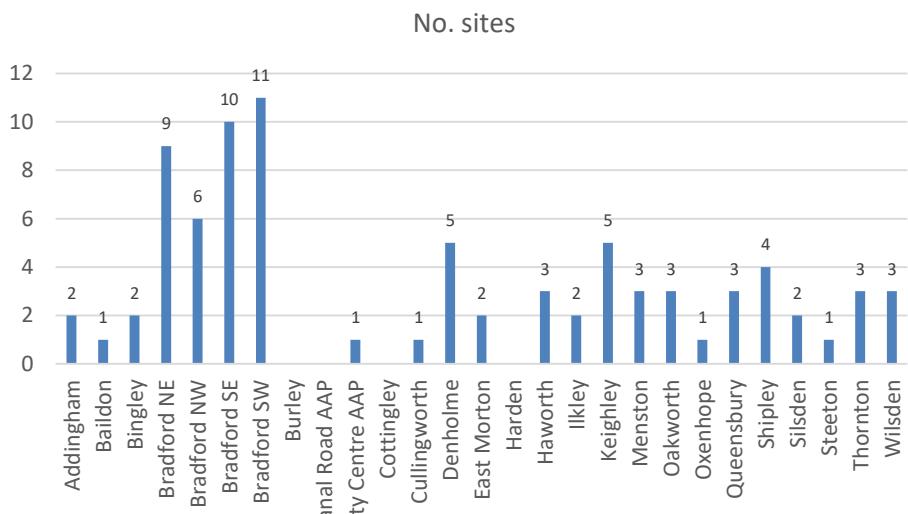

5.47 The cemeteries typology consists of municipal cemetery provision and gardens of remembrance, churchyards, church grounds, burial grounds and graveyards.

5.48 Cemeteries provide a resting and burial place for the deceased. They offer visitors a space to remember friends and loved-ones who have passed and an area for quiet contemplation. The nature and layout of these sites can often help the conservation of wildlife and biodiversity and can provide a link in the wider Green Infrastructure network.

**Figure 5.5 Amount of Cemeteries (hectares) per settlement area**

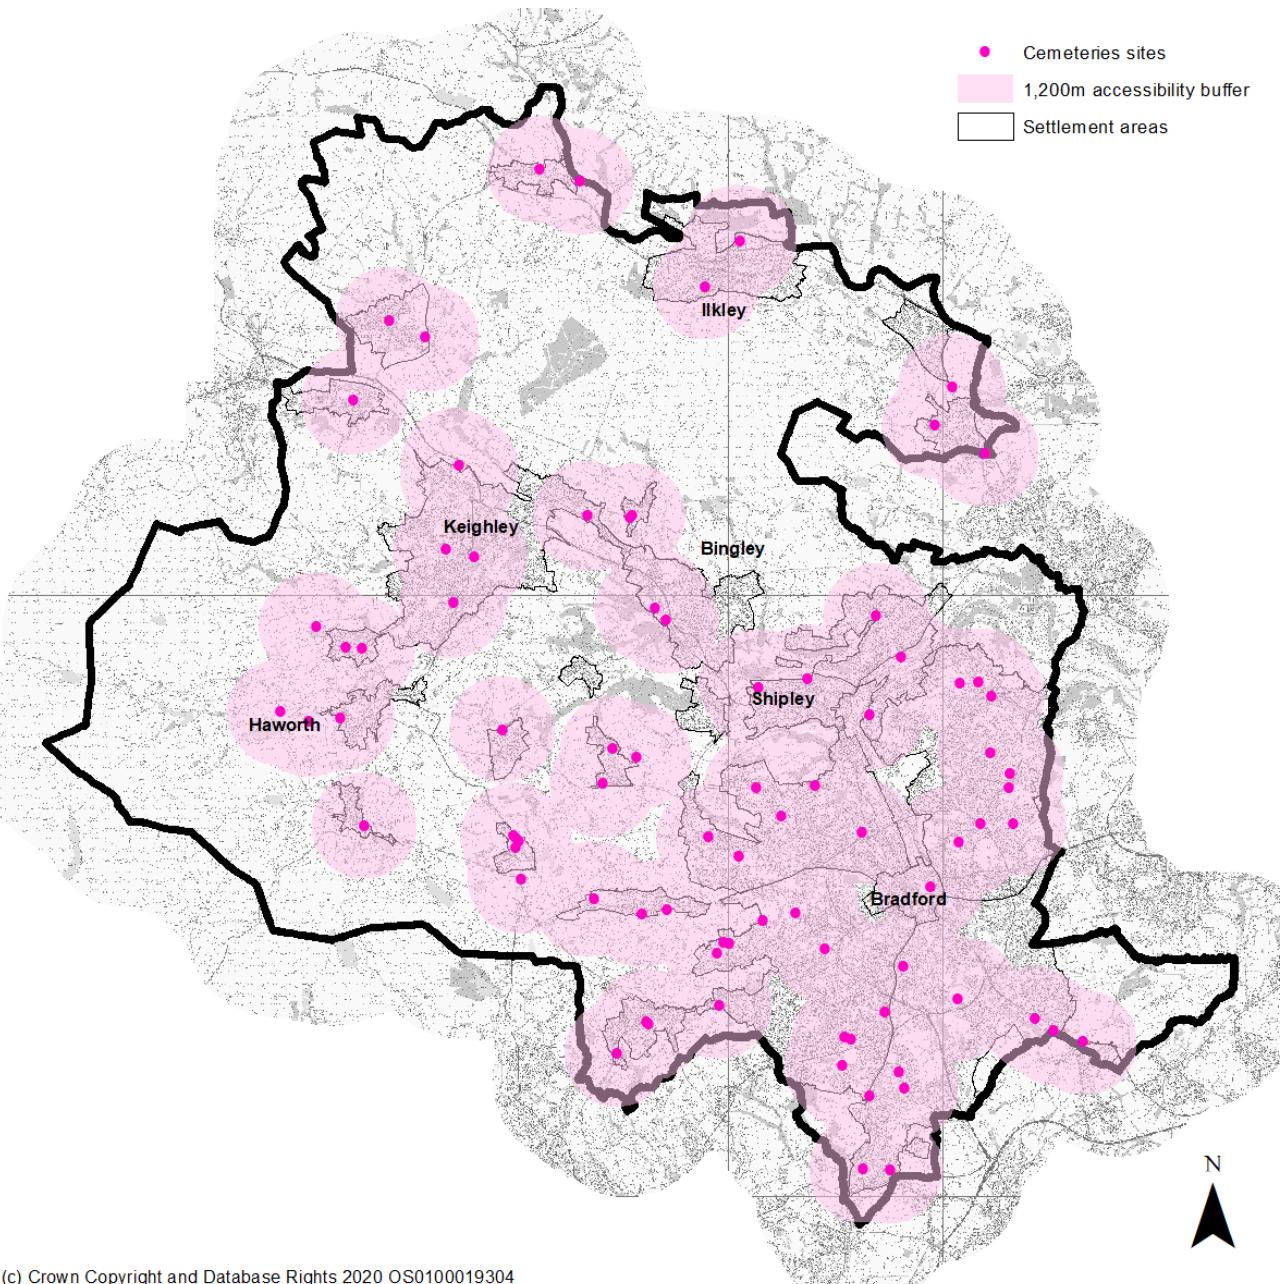

**Figure 5.6 Number of Cemetery sites per settlement area**

**Table 5.13 Cemeteries – Performance against standards and priority for provision**

(c) Crown Copyright and Database Rights 2020 OS0100019304

#### Map 5.5 Accessibility and distribution of cemeteries

#### Quantity Analysis

- 5.49 There are 83 sites within the settlement areas of the District which are classified under the Cemeteries typology covering a total area of 129.11ha.
- 5.50 All settlement areas have at least one site classed as cemetery open space except for Burley-in-Wharfedale, Harden and the Canal Road Corridor AAP area.
- 5.51 Figure 5.6 shows that the four settlement areas in the Bradford Urban sub-area have the greatest provision of cemetery space with between 6 and 11 sites per area. This is perhaps unsurprising given the proportion of the population that live in these areas and the spatial coverage of these areas. There are a number of large municipal cemetery sites within these areas including: Bowling Cemetery, Scholemoor Cemetery, North

Bierley Cemetery and Undercliffe Cemetery. These cemeteries provide for a wider catchment than just their immediate neighbourhoods.

5.52 Outside of the Bradford Urban area the next highest level of provision is found in the Principal towns of Bingley (8.26ha), Ilkley (4.14ha), Keighley (12.20ha) and Shipley (11.76). There is also notable provision in the Local Service Centre of Thornton with the provision of 6.68ha of cemetery space.

### Accessibility Analysis

5.53 Map 5.5 shows the distribution of cemetery open space across the District as well as the accessibility to cemeteries based on an 1,200m buffer around each cemetery site. This buffer represents a 15-minute walking distance from each cemetery site. There is no national accessibility standard set for cemeteries, so a local standard has been derived and applied to the data (see Section 4 and Appendix 1 for more details on setting accessibility standards).

5.54 The map indicates that the majority of the settlement areas of the District are within an accessible distance of a cemetery site. There are a few exceptions including Harden, a large part of Burley-in-Wharfedale, and parts of SE Bradford including around Holme Wood.

### Standards Analysis

5.55 Table 5.13 shows the performance of each settlement area against the cemetery provision standards (see Section 4 and Appendix 1 for further details on setting the quantity provision standards). There is no national standard for the amount of cemetery space that should be provided for a particular area. Cemeteries are often provided at a municipal level rather than for every neighbourhood and this is reflected in the quantity analysis above. In terms of the priority for increased provision, consideration should be given to the sub-area assessment findings and standards at this geographical level rather than at the individual settlement level for this typology.

5.56 It should also be noted that the application of standards for this type of open space provision is just one method of highlighting where additional provision could be required. The Bereavement Services section of the Council also provides forecasting data for the need for new cemetery space, which includes an assessment of burial plot capacity. A combination of data sets should be used for identifying the location of new cemetery provision to meet the needs of the District.

5.57 In the Regional City sub-area the settlement areas of Bradford SE, Bradford SW and Shipley all have a good level of provision and perform well against the standards. Bradford NE and Bradford NW have deficits against the standards with the Bradford NW area showing a significant negative deviation from the standard amount required to serve its population. When considering the location for new Cemetery provision Bradford NW should be a high priority. In the Shipley and Canal Road Corridor area there is no cemetery provision and there is a deficiency against the standards. However, the population size is relatively low and there is good provision in Shipley which can be accessed by residents in the corridor area. Similarly, there is limited

cemetery provision in the city centre, but again the provision in the wider Bradford Urban area is sufficient to meet the needs of residents in the city centre.

5.58 In Airedale there is a variation in the amount of provision against the standards between the settlements. Five settlements have a deficit of cemetery space with Baildon and Cottingley both seeing a significant variation from the standard. However, for Cottingley in particular there is a good level of provision in neighbouring Shipley (at Nab Wood Cemetery and through the planned new facility at Heaton) and Bingley which residents can access. Bingley, East Morton and Keighley are on the whole well served for cemetery space and are a low priority for any additional provision. Silsden and Steeton have slight deficits and there may be a need to consider additional provision to serve these areas if the opportunities arise. Overall in Airedale there is a moderate need to provide additional cemetery space.

5.59 In the Wharfedale sub-area Addingham, Ilkley and Menston all perform positively against the standards and are a low priority for additional cemetery provision. Burley-in-Wharfedale currently has no cemetery provision and therefore performs poorly against the provision standards and subsequently is a high priority for increased provision. However, as cemetery space is provided on a more sub-area basis it may be the case that provision could be accommodated elsewhere. In the sub-area as a whole, there is a very slight deficit and therefore an overall low priority for additional space.

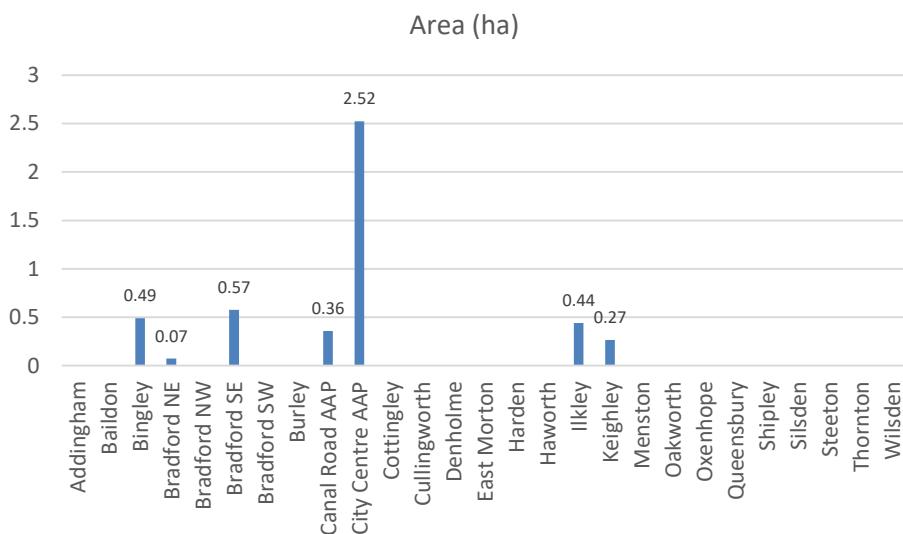

5.60 In the South Pennine Towns and Villages sub-area four of the settlements have a deficit of cemetery space, however, again similar to other areas cemetery space is more likely to be provided to serve wider communities or multiple settlements and therefore additional provision may not be necessary in every settlement which displays a deficit. The other settlements in this sub-area all perform well against the standards with Thornton, Haworth and Oakworth demonstrating good levels of provision and exceeding the standards. Overall the sub-area is a low priority for additional cemetery space.

## Civic Spaces

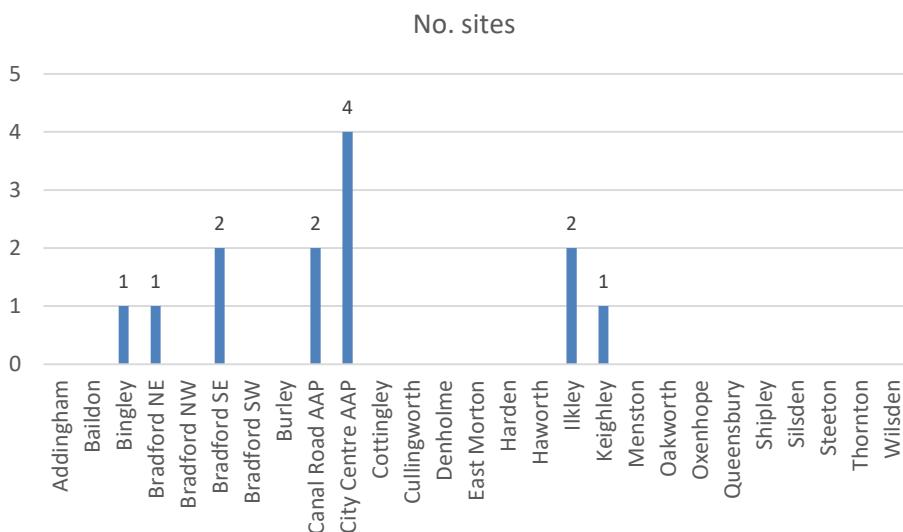

5.61 The civic space typology consists of areas of public realm which provide the setting for civic and public buildings (often formed of hard-landscaped areas), public squares, market squares and land around war memorials.

5.62 They provide areas for community events, remembrance ceremonies, public demonstrations and market stalls, as well as allowing for some informal recreational activities.

**Figure 5.7 Amount of Civic Space (hectares) per settlement area**

**Map 5.6 Accessibility and distribution of civic spaces**

#### Quantity Analysis

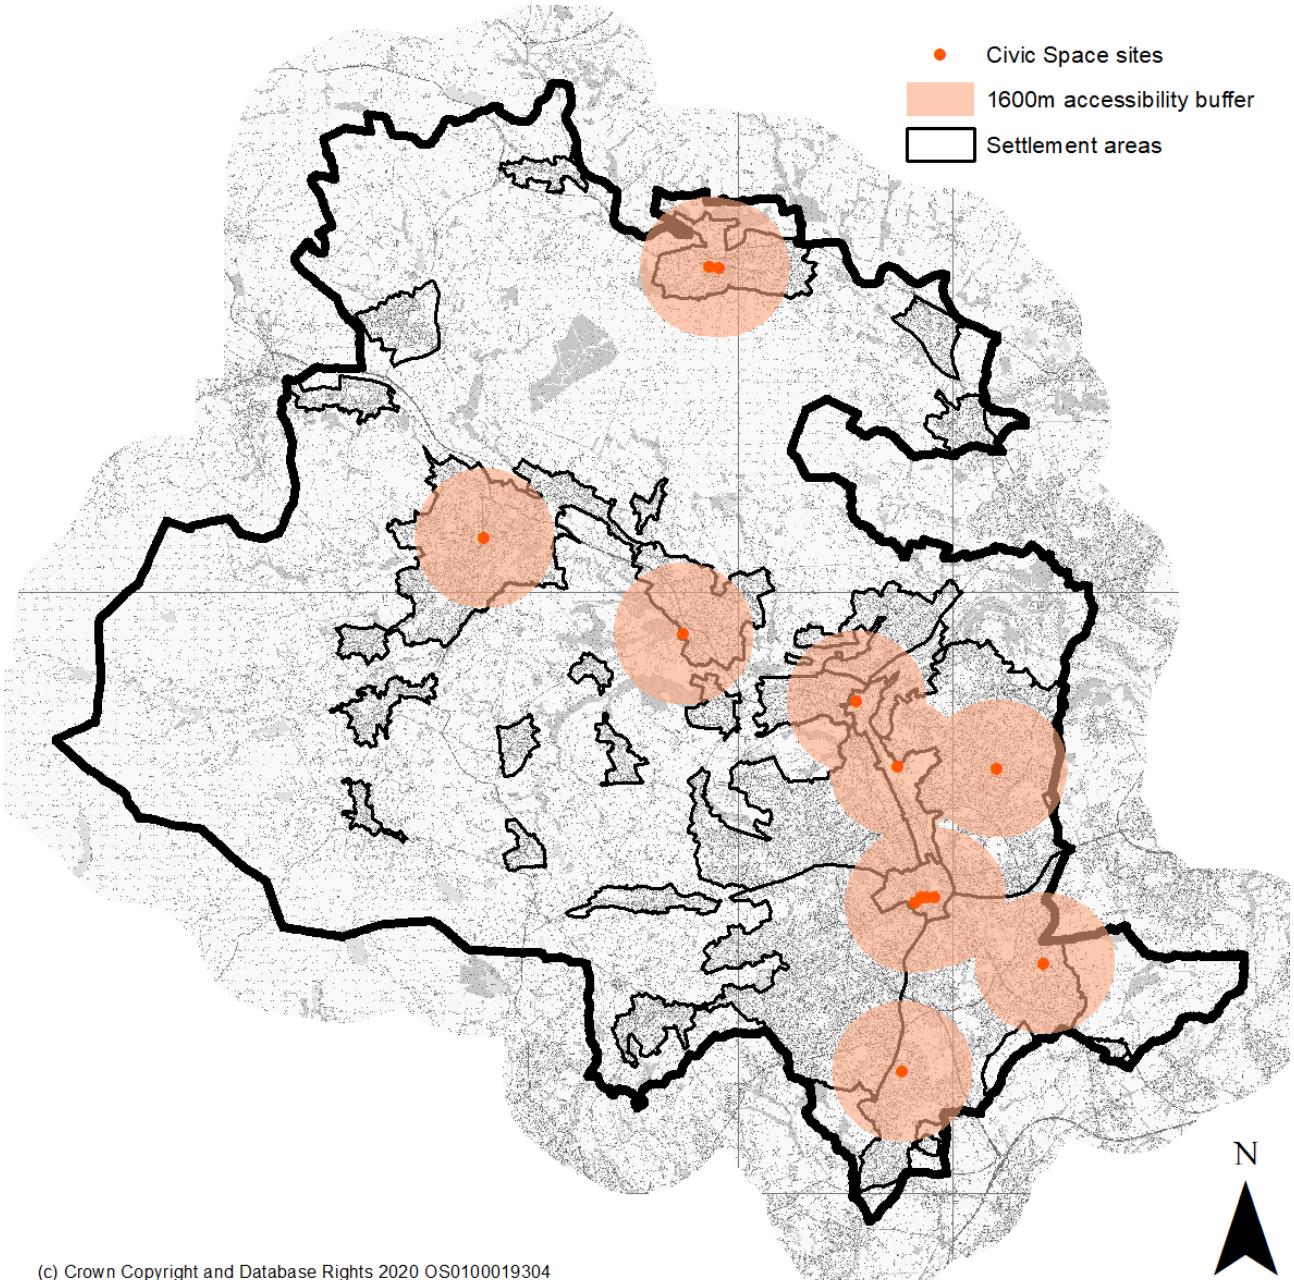

5.63 There are a total of 13 civic space sites within the settlement areas of the District, which cover an area of 4.73ha.

5.64 Figure 5.8 shows the number of civic spaces per settlement. It shows that the key civic space sites are located in Bradford City Centre, Shipley and Canal Road Corridor, Bingley, Keighley and Ilkley town centres. There are also some small war memorial sites in NE Bradford and SE Bradford, and a local precinct area in Holme Wood which also provides a civic space function.

5.65 There is no specific civic space provision in the local growth or local service centre settlements. This is perhaps not surprising given the size, function and nature of these

settlements. Small war memorial sites in these settlements may be included within another open space typology and not classified separately as civic space, or are too small to meet the site size threshold. There may also be other open space within the smaller settlements which provide a dual role including a civic function, but are classified as another type of open space.

### Accessibility Analysis

5.66

(c) Crown Copyright and Database Rights 2020 OS0100019304

5.67 Map 5.6 shows the distribution of civic spaces across the District as well as a 1,600m accessibility buffer around each site which represents a 20 minute walking distance. It is clear from the map that it is the main urban areas which have the best access to civic spaces. The majority of residents living in the principal towns of Shipley, Bingley, Keighley and Ilkley have reasonable access to civic spaces, consisting mainly of town centre squares and market places. In Bradford City the picture is more varied. Those

residents living close to the city centre have good access to a number of civic space sites (such as City Park). However, in NW and SW Bradford access to civic space is poor with residents having to travel further than 2km in some cases to access civic space. In a large city it is not uncommon for residents in the more suburban areas to have to travel further to access such spaces,

5.68 Residents living in the rural towns and villages also have limited access to civic spaces, with all of them being over the 1,600m accessibility distance from the nearest space. However, in these settlements other open space provision may also serve the function of civic space and therefore the lack of provision of this type of space in these areas is not overly concerning.

#### Standards Analysis

5.69 Table 5.14 shows the performance of each settlement area against the civic space provision standards (see Section 4 and Appendix 1 for further details on setting the quantity standards). There is no national standard for the amount of civic space that should be provided for a particular area. Civic spaces are often limited to the main town and city locations which have defined civic centres and buildings with an established civic function and a population mass to warrant the provision of such spaces.

5.70 War memorials in some of the small settlements may not have been recorded in the audit due to their size, and in some cases are located within spaces defined under one of the other typologies of open spaces such as parks or amenity greenspace and are not recorded separately as civic space.

5.71 The application of the standards for this typology is therefore only used as a high level indication of where additional civic space could be provided. As such the priority for increase provision has only being highlighted at a sub-area level.

5.72 The analysis suggests that the Regional City sub-area is a low priority for additional civic space. Although there are deficiencies against the standards in a number of the settlement areas, in the city centre there are a number of sites which perform a civic space function and these serve the whole of the Bradford Urban area to some extent.

5.73 In Airedale there is a moderate priority for additional provision. Only Bingley has sufficient civic space for the size of its population. Although there is some provision in Keighley it is not sufficient to meet the standard requirement. All the other settlements in Airedale have a deficiency of civic space provision against the standards. These areas rely on provision elsewhere in the sub-area to fulfil their needs.

5.74 In Wharfedale, the main civic space provision is in Ilkley which performs well against the provision standards. There is no provision in the other Wharfedale settlements but similarly to smaller settlements in other parts of the district, their needs can be met from provision in the neighbouring principal town, in this case Ilkley. The priority level for increased provision in this sub-area is low.

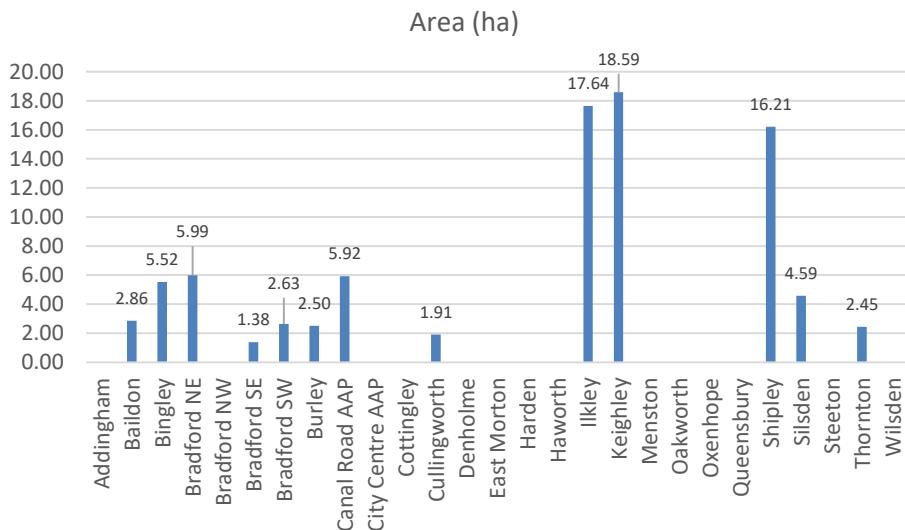

5.75 In the South Pennine Towns and Villages there is no civic space provision and so there is a notable deficiency in provision against the standard requirement in this sub-area. Where the opportunity becomes available consideration could be given to providing a

civic space site in one of the larger settlements (such as Queensbury or Thornton) to serve the surrounding smaller settlements. As such the priority level in this sub-area is high. However, given the nature of civic space, residents in the South Pennine Towns and Villages may well access civic space in the nearest principal town or the city centre.

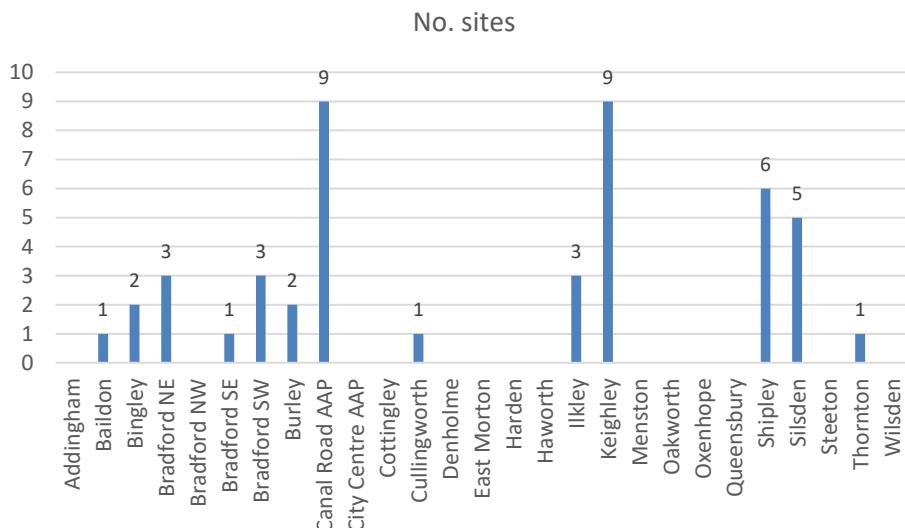

## Green and Blue Corridors

5.76 The Green and Blue Corridors typology consists of a number of waterways (including rivers and canals) and some key green routes through the district (including former railway lines).

**Figure 5.9 Amount of Green and Blue Corridors (hectares) per settlement area**

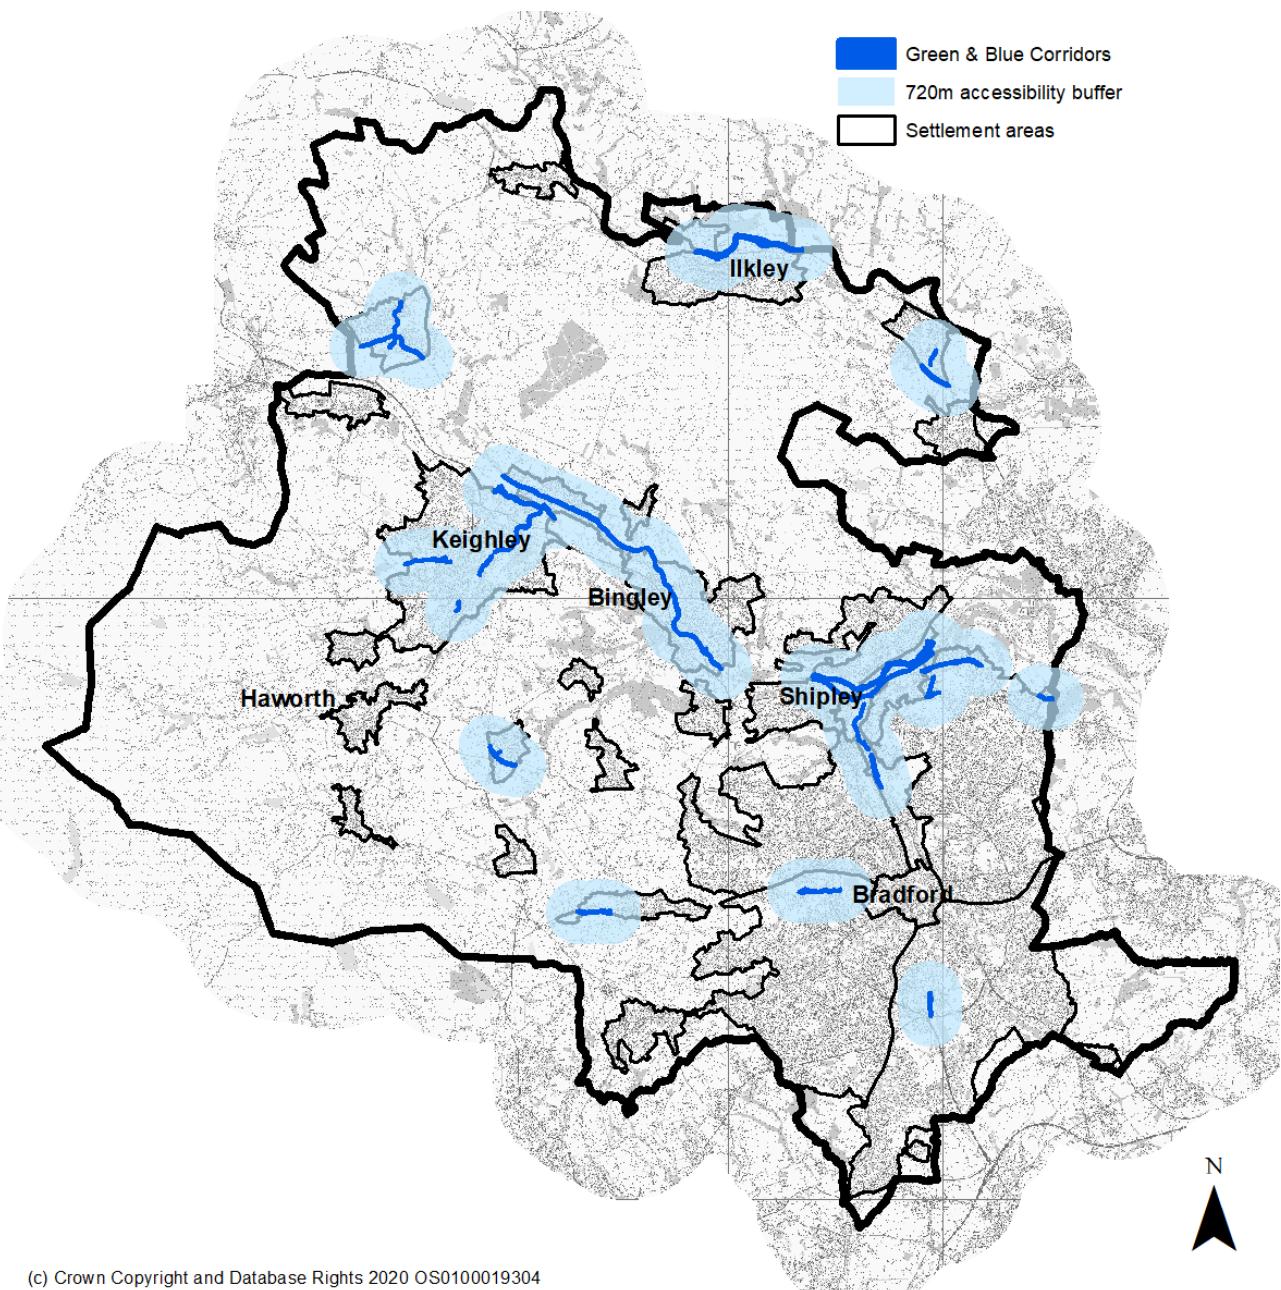

**Figure 5.10 Number of Green and Blue Corridor sites per settlement area**

**Table 5.15 Green and Blue Corridors – Performance against standards and priority for provision**

**Map 5.7 Accessibility and distribution of Green and Blue Corridors**

#### Quantity Analysis

5.77 There are 46 Green and Blue Corridor sites within the settlement areas of the District, which cover a total area of 88.20ha.

5.78 Figure 5.9 shows the amount, in hectares, of Green and Blue Corridor space and Figure 5.10 shows the number of Green and Blue Corridor sites in each settlement. Keighley (18.59ha), Ilkley (17.64ha) and Shipley (16.21ha) have the highest amount of Green and Blue corridor space in the District which is made up of the main river and canal lengths that run through these settlements and provide a key recreational and wildlife habitat function. Other areas with notable provision of this typology include the Bradford

NE (5.99ha), Shipley and Canal Road corridor (5.92ha) and Bingley (5.32ha), with provision again being made up of rivers, the canal but also a former railway corridor.

5.79 The provision of Green and Blue Corridor space is often associated with natural features or other manmade feature which rely on a specific landform or topography and therefore may not be present in all areas. There are 14 settlement areas within the District which have no specifically identified Green and Blue Corridor space. Many of these areas do include public rights of way or connection to other Green and Blue Corridors but these are not classified under this typology.

### Accessibility Analysis

5.80 Map 5.7 shows the distribution of Green and Blue Corridor spaces across the District. It also includes an accessibility buffer zone of 720m around each site. The map shows that there is a good distribution of this typology throughout the Airedale settlements with both the River Aire and the Leeds and Liverpool Canal running through this corridor. As a consequence, there is also good access to this type of open space in this sub-area. Settlements in Wharfedale also benefit from the River Wharfedale corridor and former railway lines around Burley and Menston. The South Pennine Towns and Villages are less well served by notable Green and Blue Corridor space, although the Great Northern Railway Trail runs through some of these settlements (Thornton and Cullingworth). Bradford Urban area is also poorly served by key Green and Blue Corridor routes with very limited provision in the south and north west. As a result, access to such spaces in these areas is also limited, with the majority of residents in the Bradford Urban area having to travel further afield to access this type of open space.

### Standards Analysis

5.81 Table 5.15 shows the performance of each settlement area against the Green and Blue Corridor space provision standards (see Section 4 and Appendix 1 for further details on setting the quantity standards). There is no national standard for the amount of Green and Blue Corridor space that should be provided for a particular area. The standard set for this typology is based on the average provision rate. Although there are similarities between this typology and the Natural and Semi-natural Greenspace typology, the standards reflect the uneven locational nature of Green and Blue Corridor provision. They provide ambition for those areas with limited existing space and recognise that other areas have an abundance of provision. They also reflect the findings of the Needs and Demands survey work which suggested just over a tenth of respondents thought there was a lack of provision of this type of open space.

5.82 The findings of the analysis against the standards show that in the Regional City of Bradford there is a high priority for increased provision. The four main sub-areas of Bradford NE, NW, SE and SW, as well as the city centre itself, all have deficiencies in provision of this type of space. Consideration should be given to the opportunities for providing more Green and Blue Corridor space where this is feasible as part of new developments. This may be linked to the wider provision of Green Infrastructure and the need to link areas of open space together. Current projects looking at the greening of Canal Road and Manningham Lane could be considered in future audits. The Shipley

and Canal Road Corridor area and Shipley itself, both perform well against the standards with a significant additional amount over and above the standard requirement.

5.83 In Airedale, four out of the seven settlements have a low priority for increased provision with reasonable to good performance against the standards. Cottingley, East Morton and Steeton all perform poorly against the standards with no provision in these areas and therefore are noted as being a higher priority for increased provision. However, both Cottingley and East Morton are on the periphery of provision in Bingley which is just within an accessible distance for some residents in these settlements. Therefore, the sub-area as a whole is a low priority for additional Green and Blue Corridor provision.

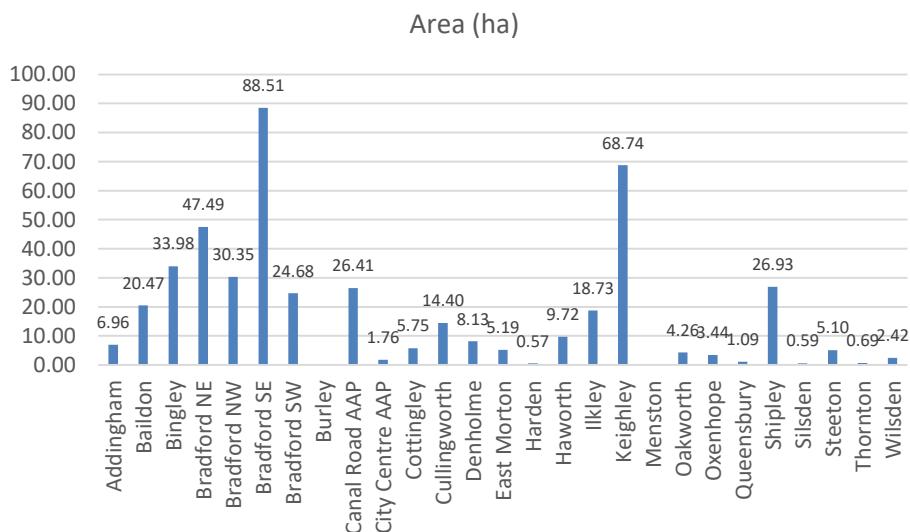

5.84 Wharfedale is somewhat similar to Airedale with some settlements considerably outperforming the standards (Ilkley and Burley) and others having no provision and therefore seeing a negative deviation from the standard (Addingham and Menston). This again provides a mixed picture in terms of the areas where increased provision should be focused. Schemes such as the Wharfedale Greenway may help to provide additional provision, particularly if the link into Menston goes ahead. Overall though, the sub-area performs well against the standards and is a low priority for increased provision.

5.85 As seen in the quantity analysis, the majority of the settlements in the South Pennine Towns and Villages sub-area have no existing Green and Blue Corridor provision, and therefore perform poorly against the set standards. Cullingworth and Thornton are the exception to this, with both settlements seeing sections of the Great Northern Railway Trail running through them and therefore perform well against the standards. Proposals to expand this route may have some benefits to other settlements in this sub-area. Furthermore, the majority of the settlements already have good access to the existing rights of way network which provides a connection into the wider countryside and so although these areas are noted as being a high priority for increased provision for Green and Blue Corridors, consideration needs to be given to the nature of the additional space that should be provided. As part of the wider Green Infrastructure programme, there may be opportunities to connect settlements together through enhanced or additional Green and Blue Corridor links. In terms of performance against the standards, the sub-area is a high priority for increased provision where this is feasible.

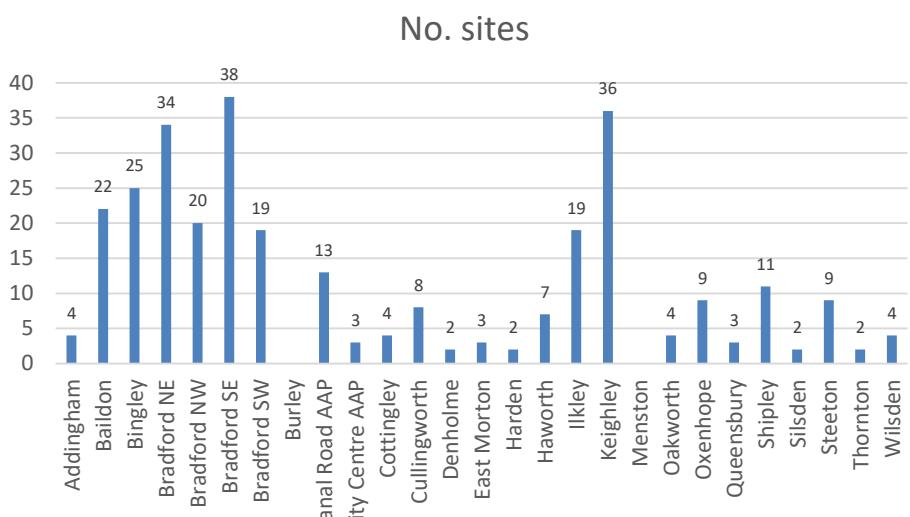

## Natural and Semi-natural Green Space

5.86 The Natural and Semi-natural Green Space typology includes a variety of sites associated with the natural environment. It includes some Local Wildlife Sites and Local Nature Reserves located within settlements along with other sites that have been left for nature (i.e. where little or no maintenance is carried out). It also includes some Woodland sites as a sub-category of this typology. The sites identified under this typology are important for wildlife conservation, biodiversity, environmental education and awareness.

**Figure 5.11 Amount of Natural and Semi-natural Greenspace (hectares) per settlement area**

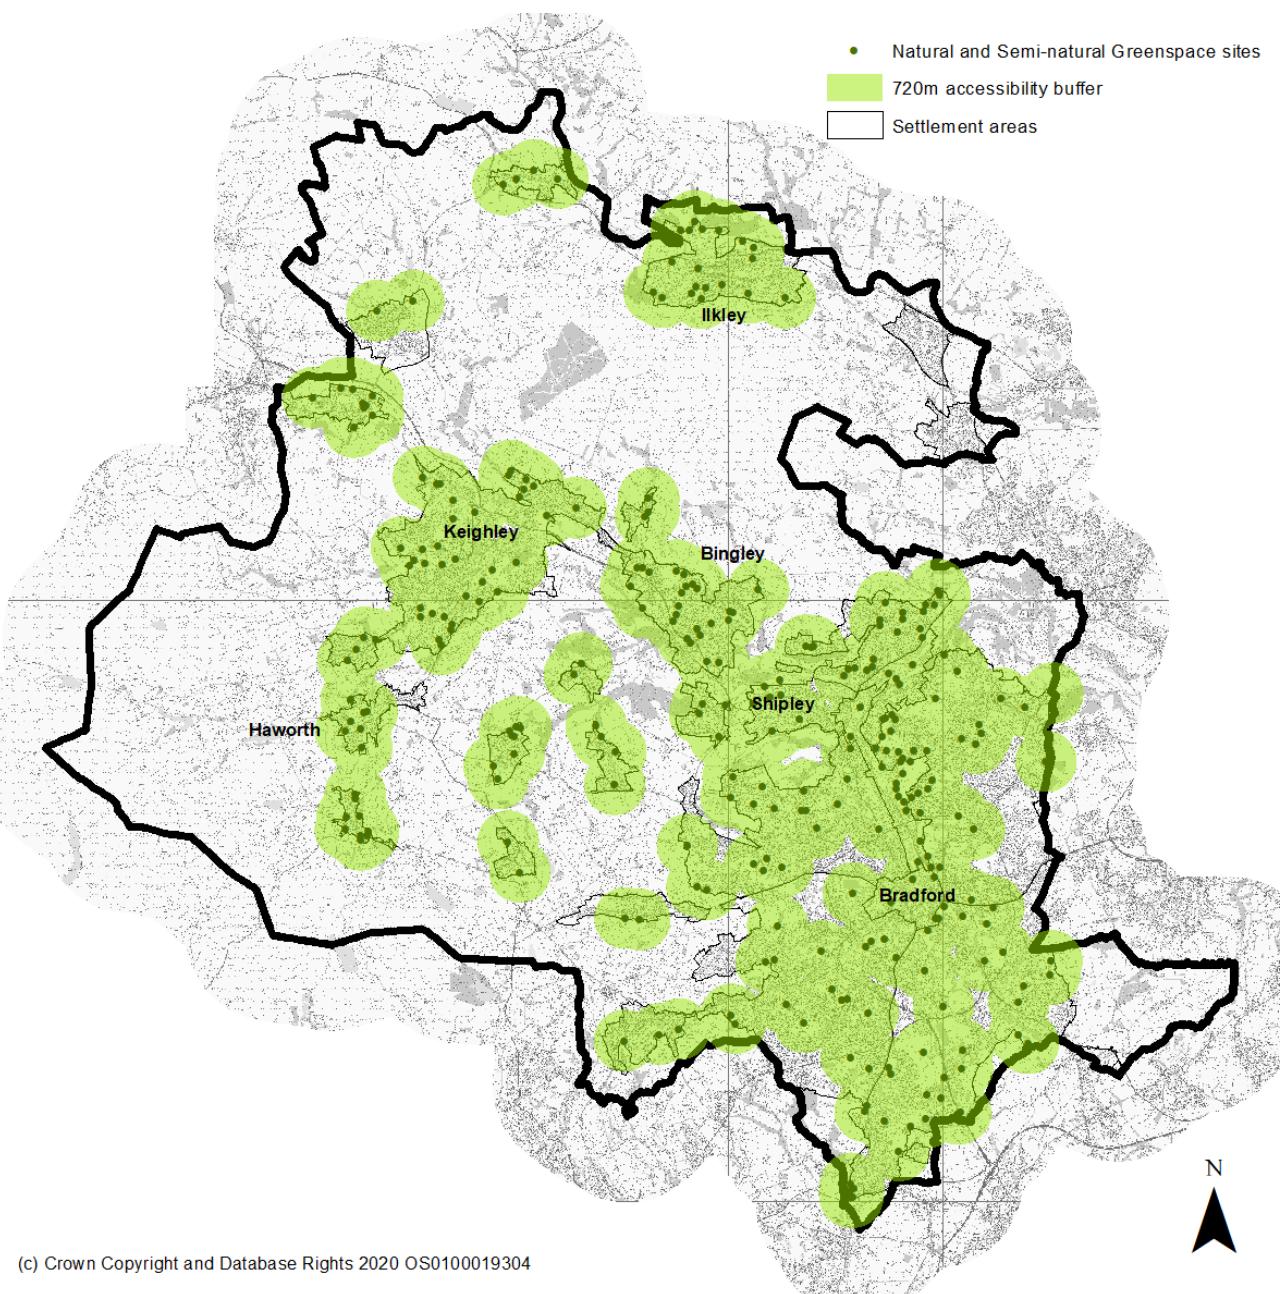

**Figure 5.12 Number of Natural and Semi-natural Greenspace sites per settlement area**

**Table 5.16 Natural and Semi-natural Greenspace – Performance against standards and priority for provision**

**Map 5.8 Accessibility and distribution of Natural and Semi-natural Greenspaces**

#### Quantity Analysis

5.87 There are 303 sites classified under the Natural and Semi-natural Greenspace typology in the District and these account for a total area of 456.36ha. Figure 5.11 shows that there is a notable variation in the amount of natural and semi-natural greenspace in each settlement. All but two of the settlements in the District have some level of provision of this typology. Burley-in-Wharfedale and Menston have no provision within their settlement limits, although these settlements are within close proximity to the surrounding countryside and there is a Local Nature Reserve on the edge of Burley at

Sun Lane (in the Green Belt) which provides a certain level of Natural Greenspace provision for its residents.

5.88 The three settlement areas with the greatest amount of Natural and Semi-natural Greenspace provision are Bradford SE (88.51ha), Keighley (68.74ha) and Bradford NE (47.49ha). Other settlement areas with notable provision (above 20ha) include Bingley, Bradford NW, Bradford SW, Shipley and Canal Road Corridor, Shipley and Baildon. Ilkley also has a significant amount of provision of this type of open space.

5.89 At the other end of the scale, those settlements with the least amount of Natural Greenspace include Harden (0.57ha), Silsden (0.59ha) and Thornton (0.69ha). Similar to those settlements without any Natural Greenspace, these settlements are located within close proximity to the wider open countryside which their residents can access reasonably easily.

5.90 Similar to other typologies of open space, there is some correlation between the amount of Natural and Semi-natural Greenspace and the settlement hierarchy tier level. Settlement areas in the Regional City sub-area and the Principal towns see the largest amount of this open space typology, whereas the local growth centres and local service centres see lower amounts of provision.

### Accessibility Analysis

5.91 Map 5.8 shows the distribution of Natural and Semi-natural Greenspace sites across the District. It also includes an 720m accessibility buffer zone around each site. The map indicates that there is a reasonable distribution of spaces across the District, although there are some clusters of spaces in some parts, particularly notable is the spread of sites along the Shipley and Canal Road corridor area, and along the wider Airevalley Corridor. Equally there are areas where there is sparser provision and this is seen in the Bradford Urban area in a ring around the city centre.

5.92 The map also demonstrates that the majority of residents have good access to Natural and Semi-natural Greenspace, with most of the population within 720m of an identified site. However, it should be noted that not all of these sites are within public ownership or are open to the public to use, although they do provide valuable habitat space for wildlife and help to support the biodiversity of the District.

5.93 The areas with notably poor access to Natural and Semi-natural Greenspace are Burley, Menston, south Silsden, and southern parts of NE Bradford. However, there are other types of open space in these areas which may also provide some natural greenspace function.

### Standards Analysis

5.94 Table 5.16 show the performance of each settlement against the provision standards for Natural and Semi-natural Greenspace. (See Section 4 and Appendix 1 for further details on setting standards). The standards for Bradford are lower than the national standards and reflect the urban nature of the Regional City area and the limited

opportunities to increase provision. However, the standards are more ambitious than the average provision rate and help to encourage increased provision where possible.

5.95 The findings of the analysis against the standards show that in the Regional City of Bradford there is a mixed picture in terms of the settlement areas which meet the standards and those where there is a considerable deficit of Natural and Semi-natural Greenspace. Bradford SE, the Shipley and Canal Road Corridor and Shipley settlement areas all perform well against the standards and are a low priority for increased provision of this typology. Bradford SW, NW and NE all have considerable deficits against the standards and should be a high priority for increasing the provision of this type of open space where opportunities arise. The sub-area as a whole has a deficit of over 95ha of Natural and Semi-natural Greenspace and is noted as a high priority for increased provision.

5.96 In Airedale, all settlements except for Silsden, perform well against the standard provision requirement, with some areas (e.g. Bingley and Keighley) showing notable amounts of Natural and Semi-natural Greenspace compared to the standards. However, it should be noted that the standards are minimums and any additional space should not be seen as a surplus. The sub-area as a whole is a low priority for additional provision of this type of open space.

5.97 In Wharfedale, the position is again more mixed with two of the settlements (Addingham and Ilkley) performing well against the standards and the other two settlements (Burley and Menston) showing a deficit in provision of this type of open space. However, as previously indicated both Burley and Menston are surrounded by open countryside which can be relatively easily accessed from these settlements. The overall priority for increased provision of Natural and Semi-natural Greenspace in this sub-area is therefore moderate.

5.98 In the settlements of the South Pennine Towns and Villages performance against the standards is again varied. Five of the settlements perform well with Cullingworth showing a significant amount of Natural and Semi-natural Greenspace above the standard requirement. However, four of the settlements show notable deficiencies against the standard and these areas should be considered for increased provision where feasible. Although it should be noted that all of these settlements are surrounded by the open countryside with reasonable access, through public rights of way, to the wider Natural and Semi-natural Greenspace provision that is on offer there. The sub-area as a whole is low priority for increased provision.

## Open Land in Settlements

5.99 The Open Land in Settlements typology is a locally derived typology which looks to define areas of land which do not fall within one of the established open space typologies. Sites classified under this typology often consist of large open areas of land located within the settlement boundary which provide a separation between historically established communities. They are typically made up of farmland or other open grassland, usually in private ownership with limited public access. They provide for the setting of settlements and can also play an important amenity function and landscape buffer.

**Map 5.9 Distribution of Open Land in Settlements sites**

#### Quantity Analysis

5.100 There are 69 sites classed under the Open Land in Settlements typology which account for a total area of 204.57ha. Figure 5.13 shows the amount of land in each settlement defined as this typology. It indicates that the settlement areas of Bradford NE (49.46ha), Bradford SE (35.06ha), Bradford SW (29.64ha) and Keighley (27.58ha) have the highest amounts of Open Land in Settlements space in the District. These important 'green wedges' help to provide natural breaks between developments and different communities, bringing the countryside into the urban area.

5.101 There are nine settlements which have no Open Land in Settlements sites. This may be due to the size of these settlements, with smaller settlements not requiring such space, or it may be that they are more rural settlements where access to the surrounding open countryside provide a proxy for the provision of this type of space.

5.102 Similar to other types of open space, there is a reasonable correlation between the size of the settlement area and the amount of Open Land in Settlement space that is provided. Although as shown in Figure 5.14, the number of sites can vary in each settlement with some having a small number of larger sites and others having a larger number of smaller sites. This is particularly noticeable in Oxenhope which has a notable number of small sites classed under this typology.

#### Accessibility Analysis

5.103 Map 5.9 shows the distribution of Open Land in Settlement sites across the District. It also includes an 800m accessibility buffer around each site. The distribution of sites is varied within settlement areas. There is a notable cluster of sites in NE Bradford where historic farmland areas separate the communities of Idle, Thackley, Eccleshill, Windhill and Wrose. There are also notable areas in SW Bradford with fields separating the communities around Scholemoor and Leaventhorpe.

5.104 Other key sites are found in Keighley and also in some of the South Pennine Towns and Villages particularly Haworth, Oakworth, Oxenhope and Thornton.

5.105 In terms of the accessibility to such sites, the standard has been based on that used for parks, i.e. 800m equivalent to a 10-minute walk. However, these sites are not always publicly accessible/useable and therefore their accessibility is perhaps less important as they are mainly providing a visual amenity value and a break in the urban massing. The map shows that many areas have reasonably good access to such sites, but there are notable gaps within the more densely populated areas of urban Bradford especially in the NW and SW areas. There is also a notable lack of access in Ilkley, Silsden and Steeton to this type of space, although these settlements have relatively easy access to the surrounding open countryside and other amenity spaces within the settlements which compensate for this lack of access.

#### Standards Analysis

5.106 Table 5.17 shows the performance of each settlement area against the provision standards for the Open Land in Settlements typology. (See Section 4 and Appendix 1 for further details on setting standards). As this is a locally derived typology there are no national standards for the amount of this type of space that should be provided in each settlement. The standards have been developed using the average provision rate for the District. However, it should be acknowledged that the requirement for this typology of open space needs to be considered on a more case by case basis. The standards for this typology can be used to show the variation in provision across the District and may help form the basis for decision making on new provision, but they should not be used as an absolute requirement target.

5.107 In the Regional City two areas (Bradford NE and SE) perform well against the standards with positive deviations of 10.99ha and 8.59ha respectively in these areas. All the other settlements in the sub-area show a deficit of provision against the standards. In two of these settlement areas (Bradford NW and SW) the deficit is significant compared to the standard requirement and suggests that an increase in this type of space would be beneficial to the area. However, this type of space will have often been established as areas surrounding it are developed, rather than it being actively provided which is the case for other types of space such as parks or play areas. It may be that the provision of this type of open space may only occur as part of the allocation of urban extensions where 'green wedges' or grassland areas are incorporated as part of a wider masterplanning exercise.

5.108 In Airedale, the position is mixed in terms of the performance against the standards for settlements in this sub-area. Again, two settlements (Bingley and Keighley) have a positive deviation from the standard requirement. Whereas all the other settlements see varying degrees of deficit of this type of open space. The standards analysis therefore indicates that there is a moderate priority for additional provision in this sub-area but similar to other areas the individual characteristics and circumstances of each settlement need to be taken into account, as well as having consideration to the standards when considering the need for new provision.

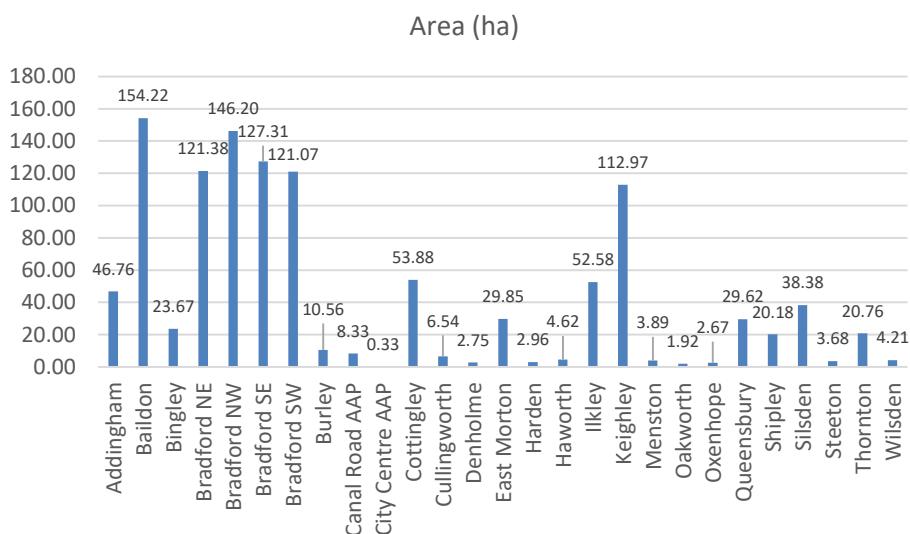

5.109 In Wharfedale, only Addingham performs well against the standards with a considerable positive deviation of this type of open space compared to the requirement for this size of settlement. The other settlements in the sub-area all have a negative deviation from the standards, with both Burley and Ilkley having no provision of this type of space. Given the poor levels of provision in this sub-area, the priority for additional provision is high. However, consideration needs to be given as to the need for this type of space in these settlements as they are all surrounded by open countryside with a good range of public rights of way giving access to these areas. The Open Land in Settlement typology provides open breaks in the urban areas and is perhaps required less in the more rural locations. Similar to Airedale settlement characteristics and circumstances need to be looked at when determining the priority for increased provision of this type of space.

5.110 In the South Pennine Towns and Villages, the performance against the standards again presents a varied picture. The settlements of Haworth, Oakworth, Oxenhope and Thornton all have good levels of provision and perform well against the standards. The sites in these settlements are all integral to the setting and character of these settlements and play a similar role to those larger areas of land within the Bradford urban area in terms of breaking up the urban mass and providing a connection to the surrounding countryside. The other settlements in this sub-area have deficits in the provision of this type of open space, but the overall priority level in the sub-area is low.

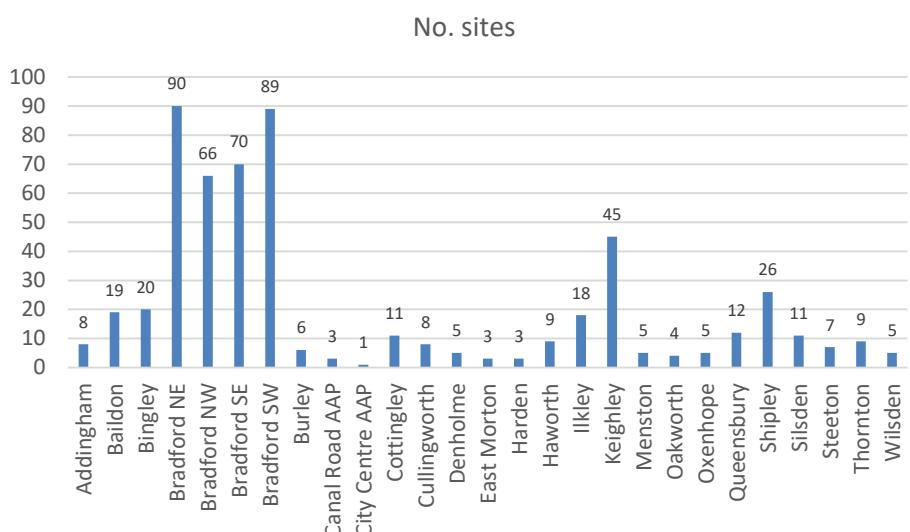

## Outdoor Sports Facilities

5.111 The Outdoor Sports Facilities typology includes sites which provide for participation in a range of sporting activities, be that formal or informal. It includes sites for formal, organised pitch sports (football, rugby, cricket), sites for more informal sport and recreation, outdoor gyms, ball courts and multi-use games areas (MUGAs). It also includes school playing fields and sports court as well as golf courses. The Playing Pitch Strategy (PPS) provides more in-depth analysis and details regarding the provision levels and need for sports pitches across the District.

**Figure 5.15 Amount of Outdoor Sports Facilities (hectares) per settlement area**

#### Map 5.10 Accessibility and Distribution of Outdoor Sports Facilities

##### Quantity Analysis

5.112 The assessment of the data indicates that there are 558 sites classified under the Outdoor Sports open space typology covering a total area of 1,151.30ha across the District.

5.113 Baildon (154.37ha), Bradford NW (146.20ha), Bradford SE (127.31ha), Bradford NE (121.38ha) and Bradford SW (121.07ha) have the highest amounts of outdoor sports space and also the greatest number of outdoor sports sites. This is closely followed by the amount of provision in Keighley which has 45 sites covering a total area of 112.97ha.

5.114 Other areas which have notable amounts of provision include Cottingley, Ilkley, and Addingham. In Addingham the large amounts of this type of space are accounted for by the large golf course attached to this settlement. In Cottingley, many of these outdoor sports sites are actually located in the Green Belt between Bingley and Cottingley and serve both settlements. Provision in Ilkley reflects its status as a principal town.

5.115 There are no settlement areas without any outdoor sports provision, however, there are some settlement areas where there are only a small number of sites, for example in Bradford City Centre.

#### Accessibility Analysis

5.116 Map 5.10 shows the distribution of the outdoor sports sites in each settlement area in the District. The map also includes a 1,200m accessibility buffer zone around each site which is equivalent to a 15-minute walk.

5.117 The map shows that there is a good distribution of outdoor sports sites in each of the settlement areas of the District, showing that residents have reasonably good access to some form of sporting facilities. The accessibility buffer layer shows that all the residential areas of the District are within a 1,200m distance of a playing pitch, playing field or other outdoor sports site. However, it should be noted that not all these sites are open for public use and therefore the true picture in terms of access to free, usable outdoor sports space may be somewhat different (see Section 6 below for further details on public access).

#### Standards Analysis

5.118 Table 5.18 shows the performance of each settlement area against the provision standards for the Outdoor Sports typology. (See Section 4 and Appendix 1 for further details on setting standards). The standard for Bradford is slightly higher than the national standard, as it takes into account the existing average provision rate and also that the data includes Golf Courses which are invariably large areas of land and can distort the provision levels. The analysis in this section considers the total provision of all outdoor sports sites, with more detailed analysis of the sub-categories of this typology included in the following section.

5.119 In the Regional City the settlement areas of Bradford NW, Bradford SE and the Shipley and Canal Road Corridor all have positive deviations from the standard requirements and display a good level of provision of outdoor sports space for residents in these areas. In Bradford SW and Bradford NE there are notable deficits of outdoor sports space against the standards. So although these areas have large amounts of space categorised under this typology, the provision does not meet the levels required for the populations resident in these areas. In Shipley, again there is a notable deficit, however, the provision within the Canal Road Corridor area also provides for residents in the Shipley area so there may be some balancing of the provision and standards between these two areas. In the sub-area as a whole there is a high priority for additional provision in order to meet the standards.

5.120 In Airedale the majority of settlements have a good level of provision of outdoor sports sites. Only two settlements (Bingley and Steeton) have a deficit against the standards for this typology. However, with Bingley some of its provision falls within the Green Belt between Bingley and Cottingley and is contained in the figures for Cottingley. Therefore, in reality, there is not a deficit within Bingley.

5.121 Although there is a good level of provision in Airedale (a total of 416.65ha), a large proportion, over 50%, of this provision is accounted for in the golf courses located in or adjacent to the settlements in this area, and which cover an area of 253.86ha.

5.122 In Wharfedale, two of the settlements (Addingham and Ilkley) have a good level of provision of this typology with notable positive deviations from the standard requirement. In Addingham this is mainly due to the provision of a large golf course on the edge of the settlement. However, even if the golf course was excluded from the provision figures Addingham would still meet the standards for outdoor sports space.

5.123 Burley has a slight deficit of outdoor sports space when compared against the standards with a moderate priority for increased provision. Menston has a more significant deficit of this provision with only half the amount of outdoor sports space provided compared to the requirement. This settlement should be a high priority for increased provision of this type of space in this sub-area. However, as a whole, the sub-area is a low priority for the provision of additional outdoor sports space, seeing a positive deviation from the sub-area requirement.

5.124 In the South Pennine Towns and Villages sub-area the position is more mixed with some settlements benefiting from good levels of provision (e.g. Queensbury, Thornton, Cullingworth) whereas others see a deficit in the amount of outdoor sports space available.

5.125 In Queensbury and Thornton, the higher levels of provision of this type of space are in part attributed to the two golf courses which are located on the edges of the settlements, with around half of the provision being made up of the golf courses. Nevertheless these settlements are a lower priority for increased provision.

5.126 Haworth, Oakworth, Wilsden and Denholme all have notable deficiencies against the standards for this type of open space. Opportunities for increasing the amount of provision in these settlements should be a high priority in this sub-area. Oxenhope has a small deficit of this type of space and is therefore of a moderate priority for increased provision.

5.127 For the sub-area as a whole, the priority level of increased provision is low, with a positive deviation from the standard requirement.

#### Sub-Categories

5.128 The Outdoor Sports typology covers a wide-range of sites used for sports. These sites can be classified under a number of sub-categories to help give a more rounded understanding of the amount and distribution of different sporting opportunities available in each area. This is important to ensure that there is adequate provision of the different

types of outdoor sports in each area. Details and definitions of the six sub-categories can be found in Table 4.3 above.

**Table 5.19 Amount and number of Outdoor Sports sites by sub-category and settlement**

5.129 Table 5.19 above and the charts below set out the amount outdoor sports open space by sub-category and by settlement.

Figure 5.17 – Number of MUGA/Sport Court sites

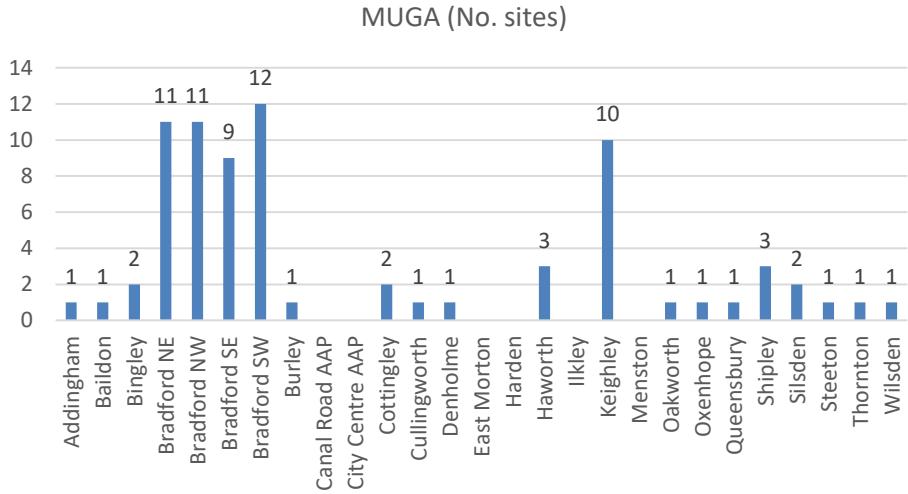

Figure 5.19 – Amount of Playing Field space (ha)

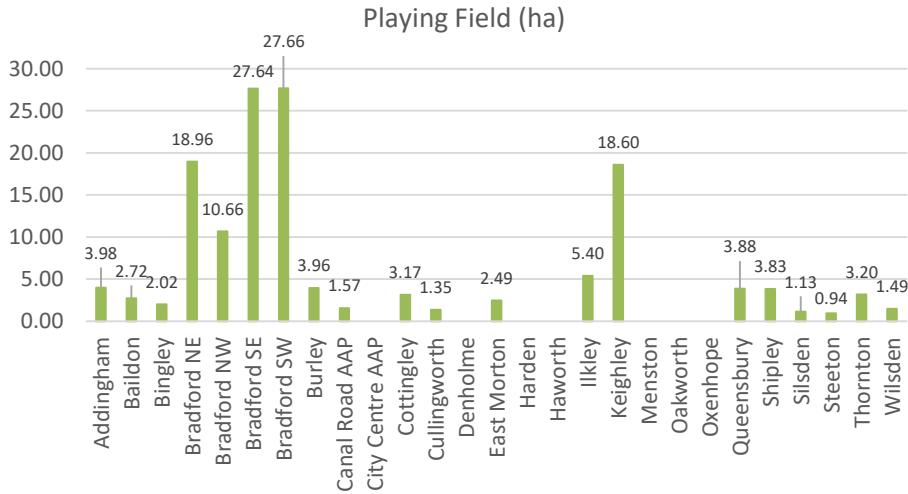

Figure 5.18 – Number of Outdoor Gym sites

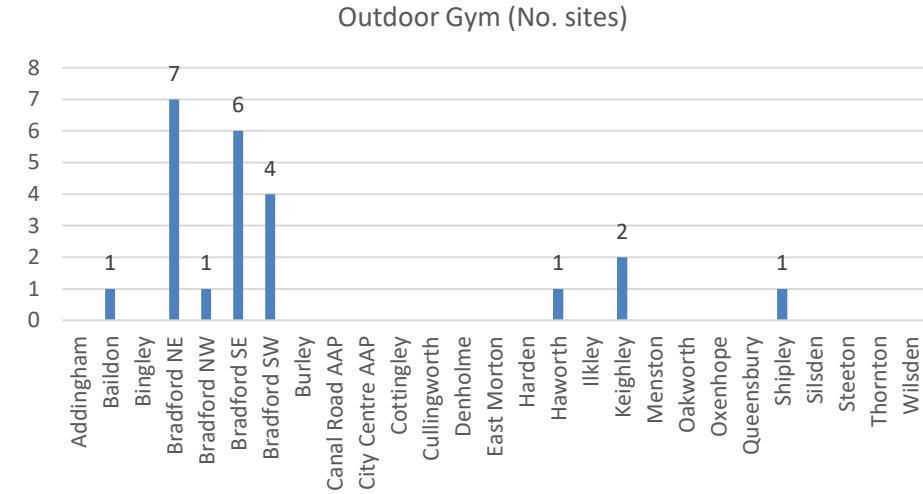

Figure 5.20 – Amount of Sports Pitch space (ha)

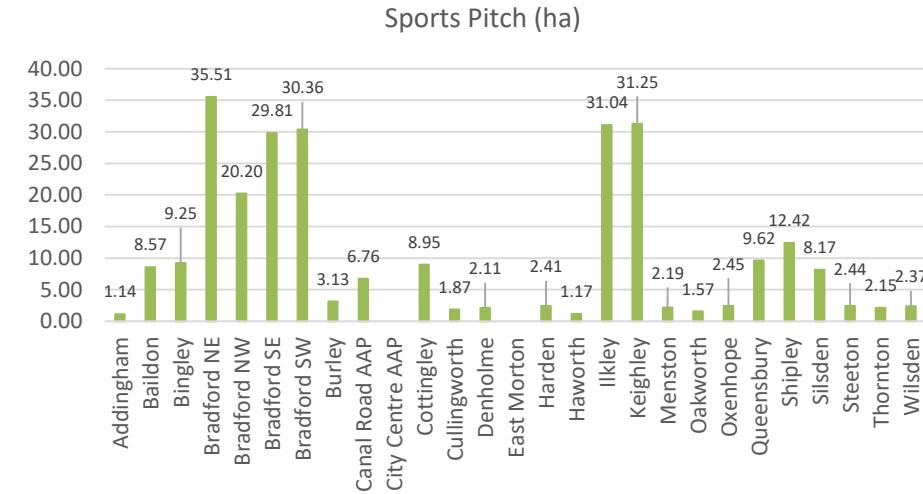

Figure 5.21 – Amount of School Playing Field space (ha)

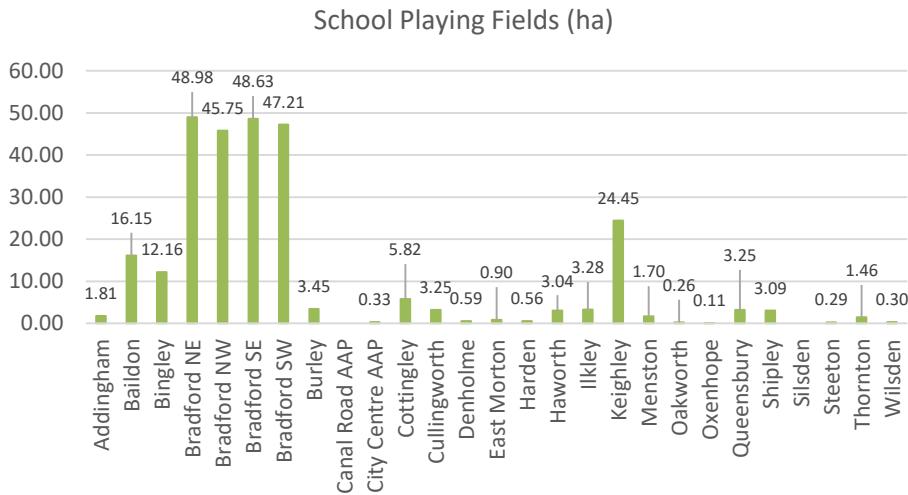

Figure 5.22 – Amount of Golf Course space (ha)

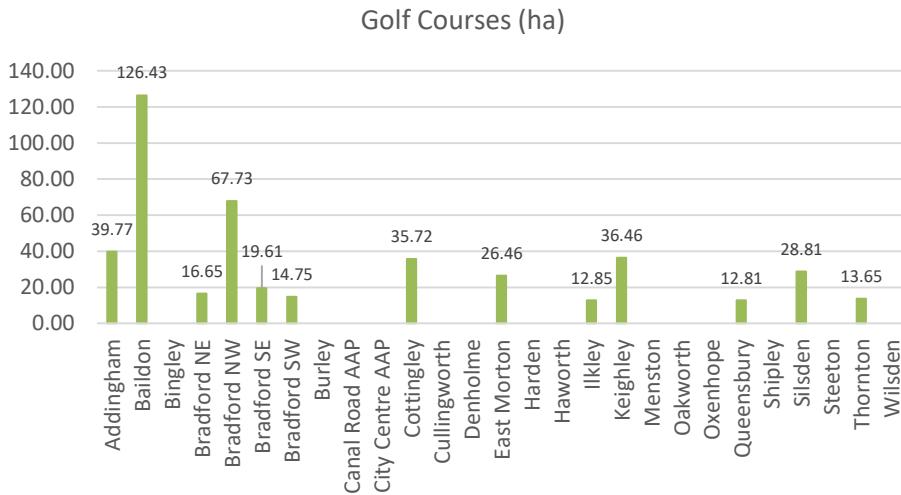

Figure 5.23 – Sub-area provision of MUGA and Outdoor Gym sites

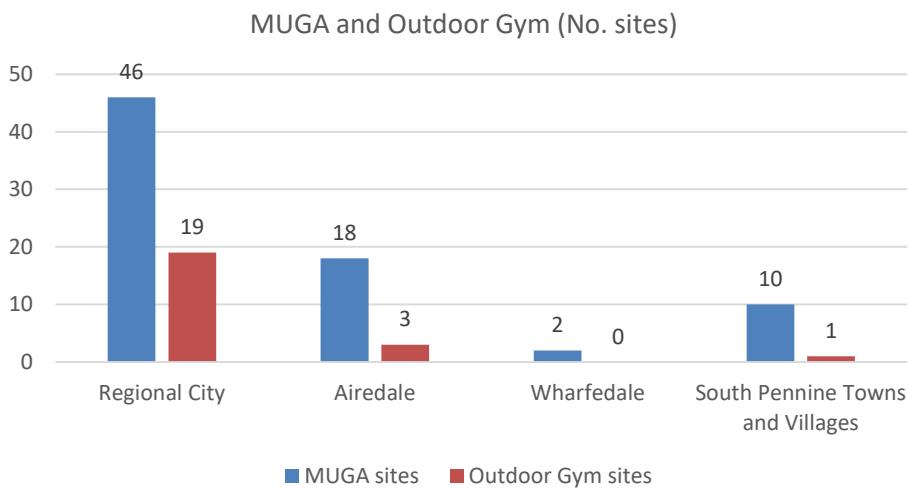

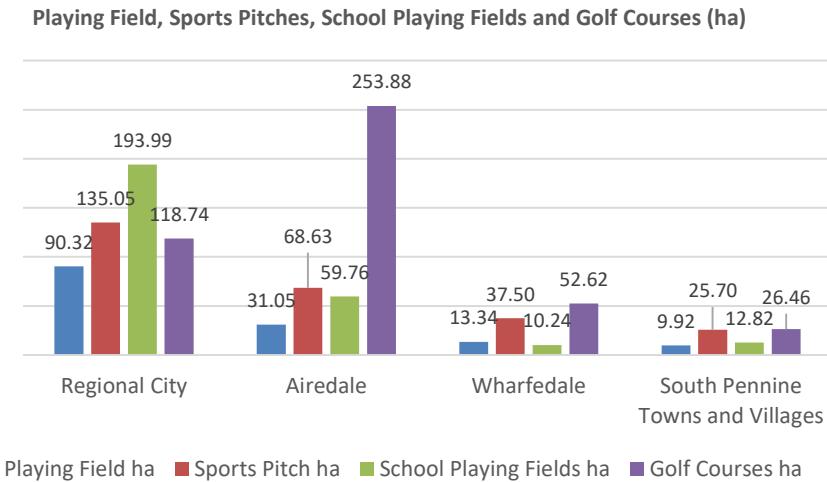

Figure 5.24 – Sub-area provision of playing field, sports pitches, school playing fields and golf course sites (ha)

## Multi-Use Games Areas (MUGAs) and sports courts

5.130 Multi-Use Games Area (MUGAs) and Sports Courts are usually fenced areas with a hard-surface, marked out for various ball games and may include other infrastructure such as nets. These spaces are often used for kick-about, five-a-side football, basketball, netball, and tennis.

5.131 Figure 5.17 shows that the four Bradford settlement areas (NE, NW, SE, SW), along with Keighley have the highest number of MUGA sites with nearly 10 sites in each area. The picture for the remaining settlements is more mixed with 15 settlements having between 1 and 3 MUGA/Sport Court sites and eight settlements not having any provision. It is perhaps unsurprising that the provision is greatest in the more urban settlements as this is where the population is concentrated and where this type of space is more often located.

5.132 Figure 5.23 shows at a sub-area level, that Wharfedale has a notable lack of provision with just two MUGAs within the sub-area. Consideration should be given to increasing the number of MUGAs in the settlements in this sub-area where the opportunities arise.

## Outdoor Gyms

5.133 Outdoor Gyms typically consist of a range of gym equipment specifically designed for use outdoors. They are often co-located within a park or close to equipped play areas. They are primarily for use by adults providing an alternative opportunity to increase people's fitness and health.

5.134 Figure 5.18 sets out the number of outdoor gym sites in each settlement area. Again, similarly to MUGAs, it is three of the Bradford Urban Area settlements which boast the highest provision of outdoor gym sites (Bradford NE (7), Bradford SE (6), Bradford SW 4)). There is limited provision elsewhere, with just six of the other settlements having any provision. 19 settlement areas have no provision at all. However, the provision of outdoor gyms is a relatively recent concept and careful consideration needs to be given as to the further roll-out of such equipment to ensure it is located in areas where there is a need/demand.

5.135 Figure 5.23 shows at a sub-area level that Airedale, Wharfedale and the South Pennine Towns and Villages all have low levels of provision of outdoor gyms. Consideration should be given as to whether these areas would benefit from increased provision and identify opportunities and locations for new sites.

## Playing Fields

5.136 Playing fields or recreation grounds usually consist of grassed areas used for informal sports which may sometimes be marked out. They may sometimes be co-located in a park or just stand alone areas within a neighbourhood. They provide for informal recreation, ball games (football, rounders etc), training and other play such as kite flying or Frisbee.

5.137 Figure 5.19 shows that most settlement areas have some level of playing field provision. As expected it is the settlement areas within the Regional City sub-area along with the principal towns which have the highest levels of provision. Seven settlements do not have any defined playing field provision, however, alternative space within these settlements such as sites classed as Amenity Greenspace, Parks, or another category of Outdoor Sports space may make up for this lack of provision.

#### Sports Pitches

5.138 The Sports Pitch category includes formal sites laid-out for specific sports such as football, rugby, cricket, bowls etc. They include the local grounds for team sports, may not be publically accessible or require some form of membership to use them.

5.139 As expected sport pitch provision is most prevalent in the larger settlement areas with the Bradford urban area settlements along with Keighley and Ilkley all having over 20ha of provision each. The majority of the remaining principal towns and local growth centres also see levels of provision which are comparable to their sizes. Only the City Centre and East Morton have no provision in this category.

#### School Playing Fields

5.140 School Playing Fields consist of sites that are attached to schools and provide the opportunity for sports as part of the curriculum or areas for outside play. These sites can be grassed playing fields, hard-surfaced courts (including 3G pitches), or other hard-surfaced areas (play grounds).

5.141 The amount of land identified as school playing field is again concentrated in the larger settlements which is clearly matched to the number of schools present in these locations. The four urban areas of Bradford see the most School Playing Field provision all with over 45ha of space. Keighley see the next highest amount at 24.45ha followed by Baildon (16.15ha) and Bingley (12.16ha). Other areas see provision rates of between 0.5ha and 6ha and there are two settlement areas (Canal Road Corridor and Silsden) which have no provision. In the Canal Road Corridor there are no school sites and in Silsden a new primary school is currently being constructed and will include some playing field space. This site will be included in the next review of the audit.

#### Golf Course

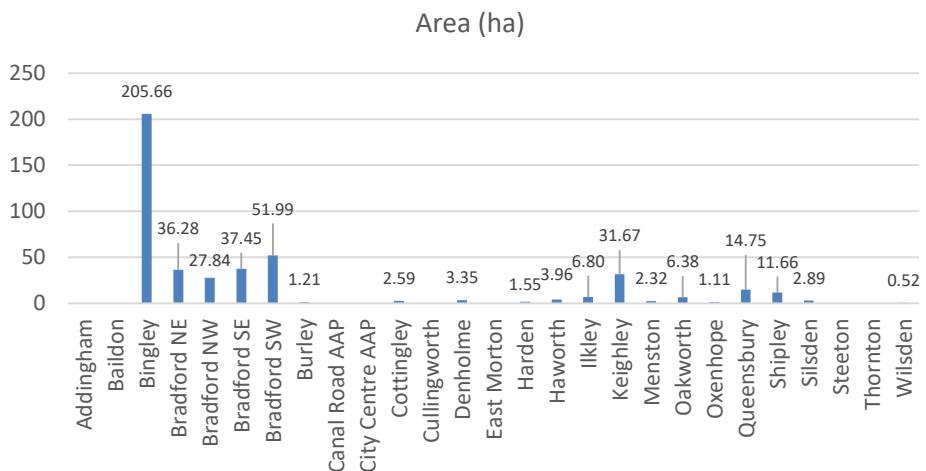

5.142 Golf Courses are typically large expanses of land within or more usually on the edge of a settlement providing for local residents and others often on a membership basis. All golf courses in Bradford are privately run and may include membership.

5.143 There are a total of 18 golf course sites in the District covering a total area of 415.69ha. This accounts for 36% of the outdoor sports provision in the District. The distribution of golf courses across the District is somewhat uneven. As noted previously and shown to effect in Figure 5.24, Airedale has a considerable amount of its outdoor sports provision classed as golf courses with nearly 200ha of land in this category and is notably disproportionate to the amount of space in other categories and in other areas.

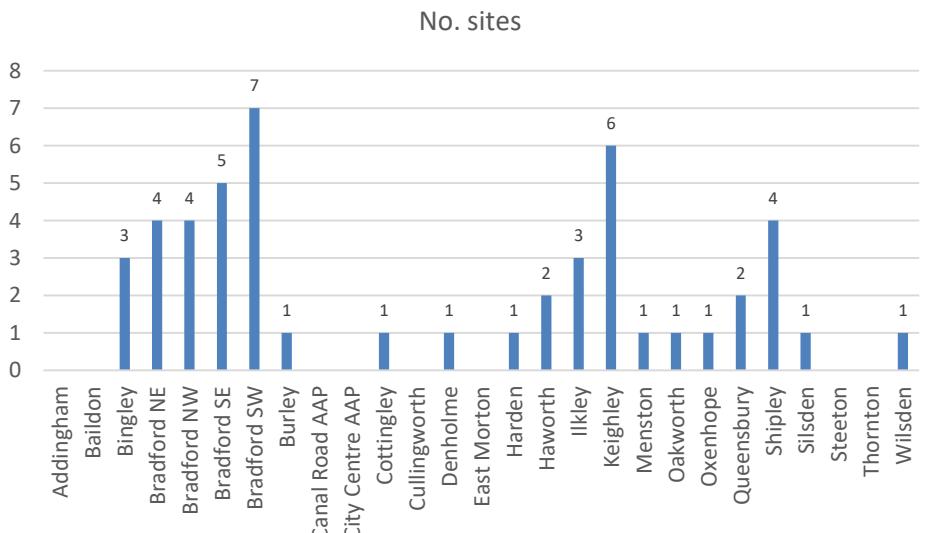

## Parks and Gardens

5.144 The Parks and Gardens typology consists of a range of different types and scales of parks, including: formal municipal parks, smaller urban or neighbourhood parks, pocket parks, formal gardens and country parks. These spaces provide an opportunity for informal recreation, community events and areas to meet. They often include other areas (typologies) of open space within their boundaries (e.g. an equipped play area, sports court or pitch) and are therefore multifunctional in their nature.

**Figure 5.25 Amount of Parks and Gardens (hectares) per settlement area**

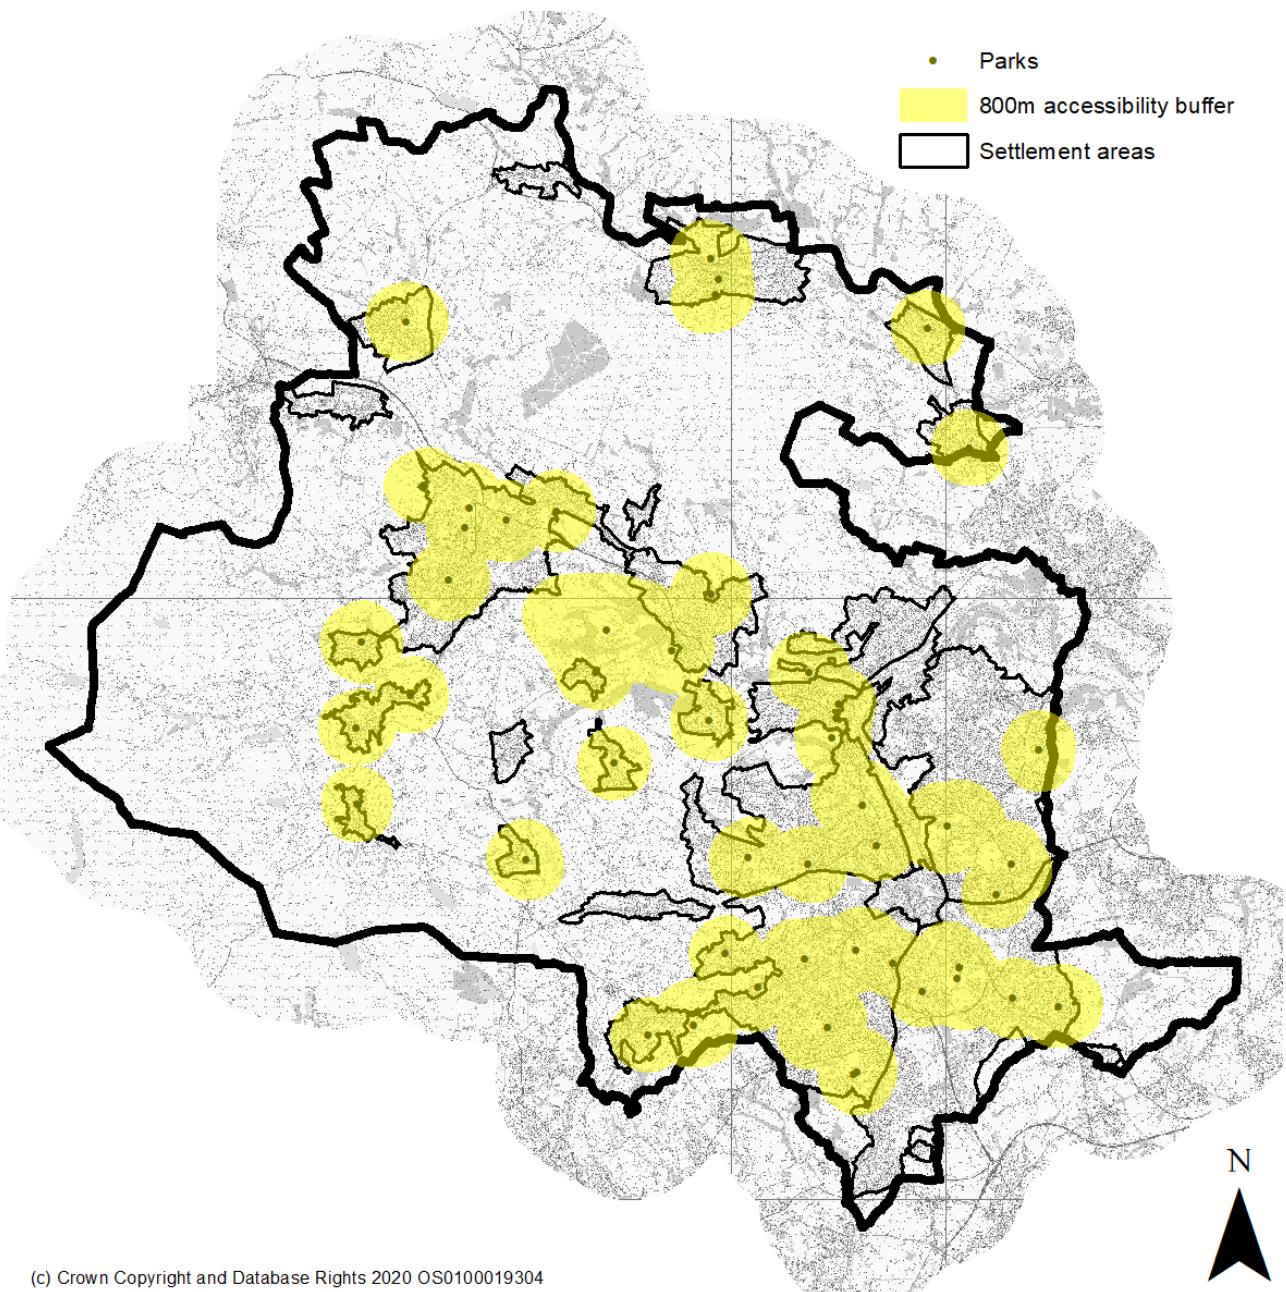

**Figure 5.26 Number of Parks and Gardens sites per settlement area**

**Table 5.20 Parks and Gardens - Performance against standards and priority for provision**

**Map 5.11 Accessibility to and distribution of parks and gardens**

#### Quantity Analysis

5.145 The data shows that there are 49 sites classified under the Parks and Gardens typology which cover a total area of 449.98ha. Figure 5.26 provides data on the number of Parks in each settlement and indicates that there are eight settlement areas which do not have a specific park site.

5.146 The three areas with the greatest number of parks are Bradford SW (8 sites), Keighley (6 sites) and Bradford SE (5 sites). However, in terms of the amount of parks space, Bingley (205.66ha), Bradford SW (52.07ha) and Bradford SE (37.45ha) have the greatest area designated. In Bingley this includes the large St Ives Country Park estate

and to some extent distorts the findings when looking at the quantity provision in hectares.

5.147 The data indicates that, apart from the anomaly of Bingley, there is a reasonable correlation between the number of park sites and the overall amount of land identified as park space in each settlement. There is a notable range of sizes of parks with three of the municipal parks (Lister Park, Bowling Park and Peel Park), which serve a large catchment and proportion of the population of urban Bradford, each measuring over 20ha in size. There are then more local level parks which may range between 2 and 20ha in size that serve key communities. A third tier of smaller neighbourhood level parks and pocket parks fall under 2ha in size. The type of park space provided in each settlement is usually relative to the size of the settlement and its population.

#### Accessibility Analysis

5.148 Map 5.11 shows the distribution parks and gardens across the District. An 800m accessibility buffer zone is included around each site which represents a 10-minute walking distance. The accessibility standards are set out in Section 4 and Appendix 1. The standards for the parks and gardens typology follow the national standards.

5.149 The map shows that most areas have reasonable access to a park or garden with most residential areas being within the 10-minute catchment area of a park site. However, there are some notable exceptions, these include those settlements without any park provision (Addingham, Cullingworth, East Morton, Steeton, and Thornton) and some parts of the larger urban areas of Bradford particularly around Thackley in NE Bradford, Bierley and Low Moor in SE Bradford, Chellow Heights and Sandy Lane in NW Bradford and also the north eastern part of Baildon. Access to parks and gardens in these areas is more limited and residents would need to travel further to access this type of open space.

5.150 As well as meeting the quantity standards for park provision, as set out below, when looking for new park sites, consideration must be given to the distribution of the existing sites and identify locations which will help to fill the gaps and provide better access to this type of open space.

#### Standards Analysis

5.151 Table 5.20 shows the performance of each settlement area against the provision standards for Parks and Gardens. (See Section 4 and Appendix 1 for further details on setting standards). The local standard set for parks provision for Bradford is slightly higher than the national standard, but reflects the average provision rate and the findings of the Needs and Demands assessment which identified that users considered that there was a lack of park space in some areas.

5.152 In the Regional City, none of the settlement areas meet the provision standards, even though many of the District's large municipal parks are located in this sub-area, there are still areas where provision is not sufficient to meet the requirements for the size of the population living in these areas.

5.153 Bradford NE (-44.42ha), NW (-39.68) and SW (-33.68ha) all have significant deficits of park space which need to be addressed as part of future development proposals. With such large deficiencies of this type of space and limited land available, it is acknowledged that it may not always be possible to meet the standards. However, where new space cannot be provided consideration needs to be given to improving the quality and accessibility to existing provision.

5.154 Bradford SE and Shipley also have deficits of this type of space but the level is not as severe. However, for the sub-area as a whole, the priority level for increased provision is high.

5.155 In Airedale the majority of settlements do not meet the requirement standards. Similar to the Regional City sub-area, some of the settlements are home to some of the District's larger parks (e.g. Cliffe Castle, Devonshire Park and Lund Park) yet although there are a range of sites in these settlements, they are not sufficient to meet the requirements for the size of the populations. Baildon and Keighley, and to some extent Silsden and Steeton all have considerable deficits of park space when compared to the standards. Settlements in this sub-area are therefore a high priority for increased provision. The exception to this is Bingley which benefits from Myrtle Park and the large Country Park Estate of St Ives.

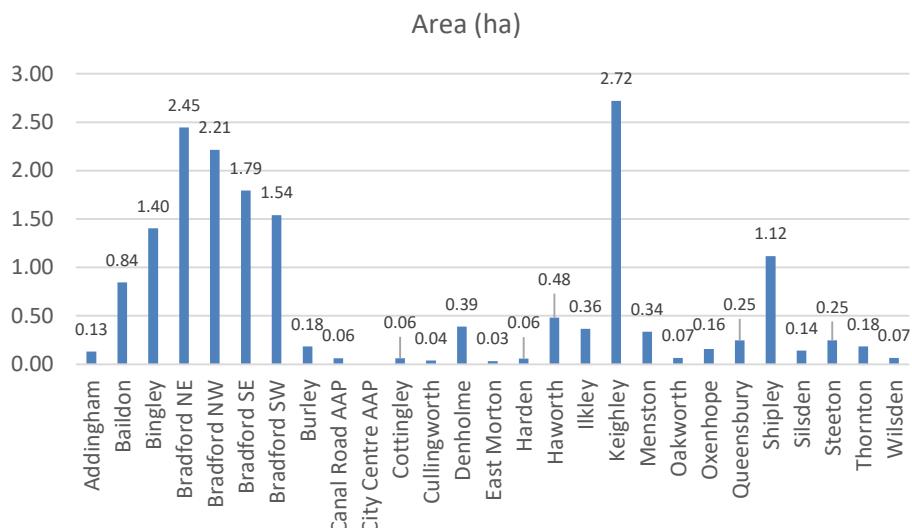

5.156 Similar to the Regional City, none of the settlements in Wharfedale meet the standards for park provision. Addingham in particular has no existing formal park provision and residents rely on other types of open space to fulfil the lack of park space. Opportunities for the provision of a park space should be considered as a high priority. The other settlements in Wharfedale have varying degrees of provision of park space but do not currently meet the required levels of provision for the size of their population. The priority for increased park provision in this sub-area is therefore high.

5.157 In the South Pennine Towns and Villages, the position is more varied with some settlements (Denholme, Harden, Oakworth and Queensbury) having sufficient provision to meet the standards, showing a positive deviation from the requirement. However, there are some settlements which have a notable deficiency in park provision with a significant deficit of this typology, including Cullingworth (-2.34ha), Thornton (-5.24ha), and Wilsden (-3.01ha). Although the overall priority level for increased park provision in this sub-area is moderate, the priority in these settlements is higher and consideration should be given to increasing provision where possible as part of new developments.

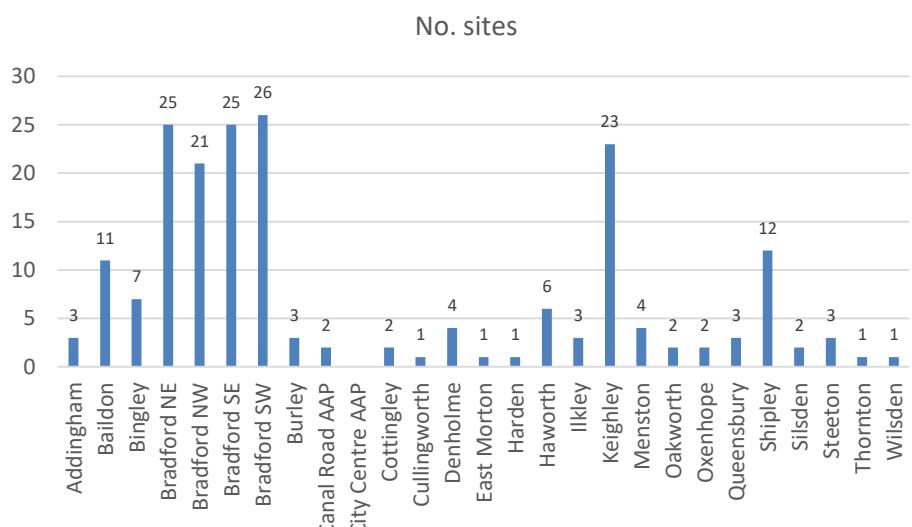

## Provision for Children and Young People

5.158 The Provision for Children and Young People typology (play areas) consists of a range of different types and sizes of play areas which usually include a variety of play equipment for various ages. This typology also includes BMX/Skate parks and natural play areas.

**Figure 5.27 Amount of Provision for Children typology (hectares) per settlement area**

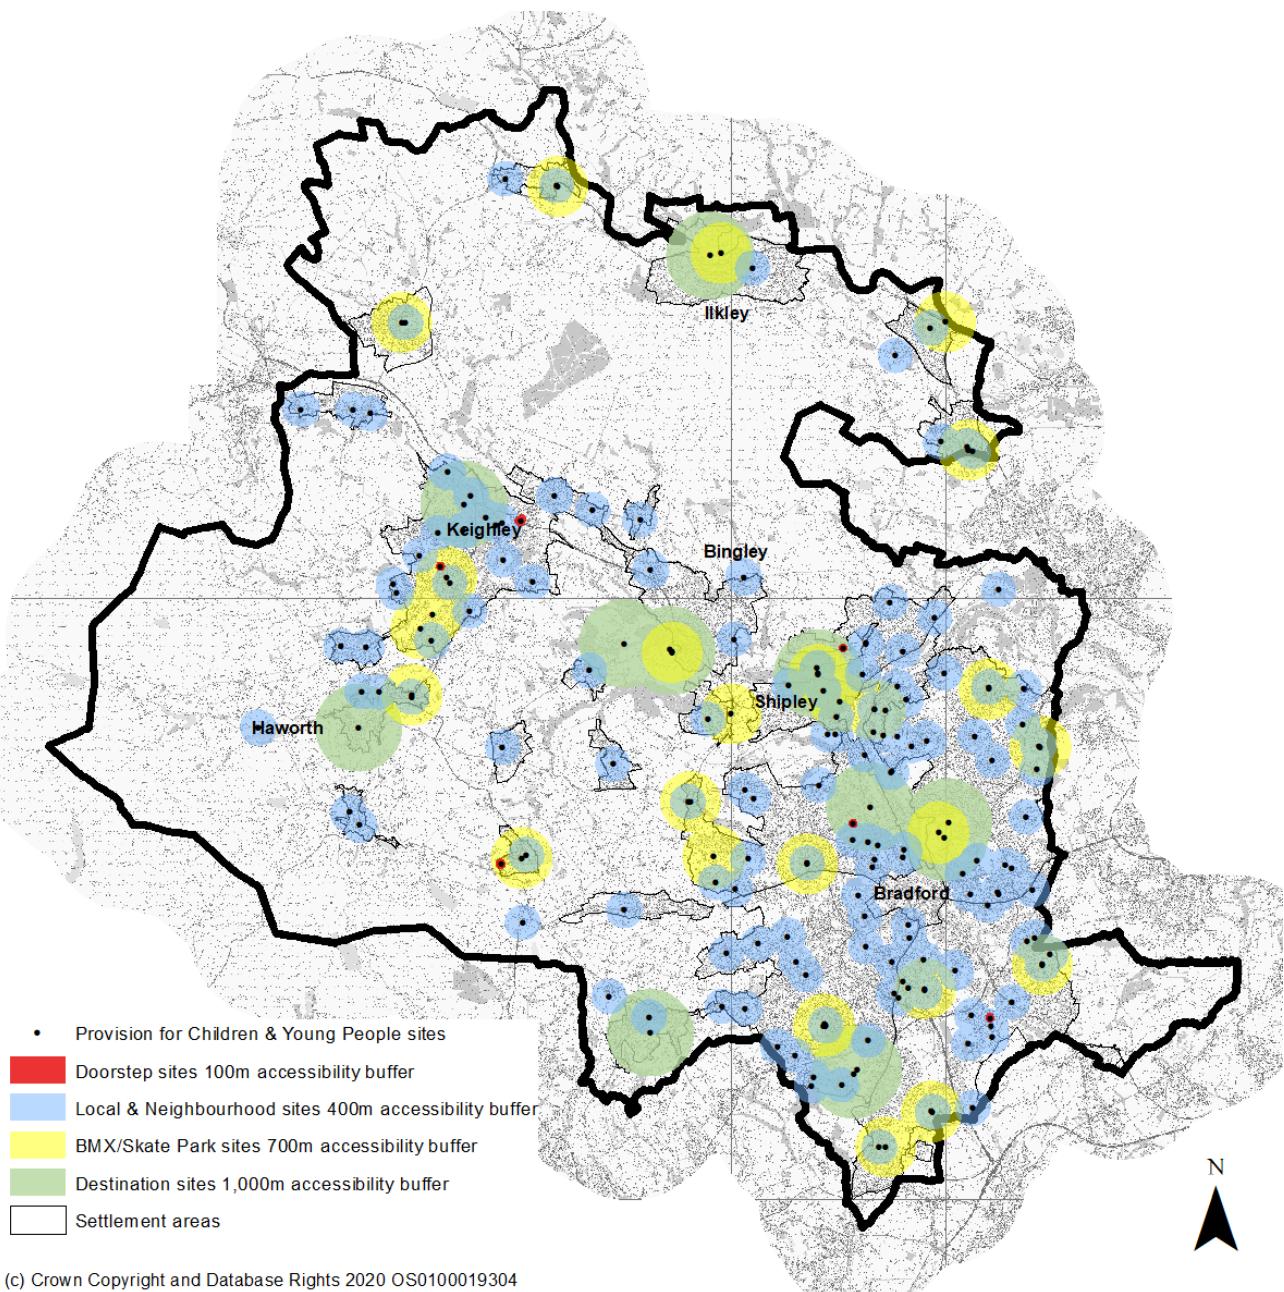

**Figure 5.28 Number of Provision for Children sites per settlement area**

**Table 5.21 Provision for Children - Performance against standards and priority for provision**

<b>Sub-area</b>	<b>37,007</b>	<b>15</b>	<b>21</b>	<b>6</b>	<b>LOW</b>

### Quantity Analysis

5.159 There are a total of 194 sites classed as Provision for Children and Young People (play area) sites within the District, which cover an area of 17.32ha. Figure 5.27 sets out the amount of play area space (in hectares) and Figure 5.28 presents the number of play area sites by settlement.

5.160 The data shows that all settlement areas apart from the city centre have at least one play area site. The four Bradford Urban sub-areas (NE, NW, SE, SW) together with Keighley have the highest number and largest amount of play area space, with each settlement having over 20 sites. Shipley, Baildon, Bingley and Haworth are the settlements with the next greatest amount of provision with between 6 and 12 sites

each. The remaining smaller settlements have between 1 and 4 sites each. Ilkley has a notably low level of provision for the size of the settlement.

### Accessibility Analysis

5.161 Map 5.12 shows the location and distribution of each of the play area sites and also includes the relevant accessibility buffer for the category of play area. The accessibility standards are set out in Section 4 and Appendix 1. These standards follow the Fields in Trust accessibility standard for different play sites.

5.162 The map shows a varied picture in terms of spread of play area sites. There is a reasonable distribution of local/neighbourhood sites and as shown by the quantity analysis every settlement area has at least one play area space. However, the map clearly shows that there are areas, especially in inner urban Bradford which do not have any play space available and are not within an accessible distance of the nearest site.

5.163 The key areas where provision and/or access is poor include: Daisy Hill (Bradford NW), Four Lane Ends, Lidgett Green (Bradford SW), parts of East Bowling (Bradford SE) and to some extent the area around Swain House (Bradford NE). Both the western and eastern extents of Ilkley and central parts of Bingley have noticeably poor provision and/or access to play area sites.

5.164 The larger destination sites are again reasonably distributed across the district in key locations, often being co-located in the large municipal parks. The accessibility standard distance for these sites is slightly larger at 1,000m (equivalent to a 12-minute walk) and therefore incorporate a large catchment area. However, there is still a notable lack of such sites in parts of the District especially in Bradford SE and also along the western edge of the wider Bradford Urban area.

### Standards Analysis

5.165 Table 5.21 shows the performance of each settlement area against the provision standards for children and young people sites. (See Section 4 and Appendix 1 for further details on setting standards). These standards are slightly different to the other types of open space, as they are presented on the basis of the number of sites/facilities per 1,000 of the population rather than the area (ha) per 1,000 of the population. This is because the provision is more related to the quantity of sites and their equipment rather than the size in hectares of the provision.

5.166 In the regional city there is a varied position in terms of the different settlement areas meeting the standards. In Bradford NE, NW and SW, although these areas see the highest number of play area sites, there is still a deficit in provision compared to the required number of sites to meet the standards and the needs of the population living in these areas. Bradford SE, the Shipley and Canal Road Corridor and Shipley all have a positive deviation from the standard, with Shipley notably having a generous number of play areas. The standards indicate that the city centre should provide at least one play area site to support its population. There is currently no provision in the city centre so there is a deficit in provision. In the sub-area as a whole there is a notable deficit of play area space and the priority level for increased provision is high.

5.167 In Airedale all settlements, apart from Silsden, either meet the standard or have a level of provision above the standard. Silsden would benefit from the provision of at least one additional site to meet the standards. As outlined in the accessibility section, although the provision levels may be adequate, the distribution of the sites does not always match with the concentrations of the population and although the sub-area as a whole is a low priority for additional provision, consideration should be given to either relocation of spaces or ideally new provision in areas which have poor accessibility to the existing sites.

5.168 In Wharfedale all settlements except for Ilkley either meet the standards or provide more than the minimum. In Ilkley there is a notable deficit in provision. There are only three existing sites and the standards require six for the size of population. As previously noted, the distribution of the existing provision is concentrated centrally with poor provision and access in the residential areas to the west and east of the centre. Again, the sub-area as a whole is a low priority for additional provision, although consideration should be given to increasing provision specifically in Ilkley, especially where new development is to be proposed.

5.169 The picture in the South Pennine Towns and Villages is more mixed. Six out of the nine settlements either meet the standard or provide more than the minimum required. These tend to be the smaller local service centre settlements. The Local Growth Centres of Queensbury and Thornton both have a deficit in provision. Wilsden also sees a deficit in provision and these settlements would all benefit from at least one extra site and additional facilities. Both Denholme and Haworth see a generous level of provision for the size of the settlement and this means that the overall priority for increased provision in the sub-area is low. However, again where there is likely to be an increase in population from proposed development, consideration will need to be given to additional provision, especially in the local growth centres.

#### Sub-categories

5.170 There are different types of play area sites which have different levels of equipment, are designed for different age groups or are of a range of scales serving different population catchments / areas. Section 4 provides more details and definitions for the four categories of play area but in summary they consist of: i) Doorstep Play Areas; ii) Local/Neighbourhood Play Areas, iii) Destination Play Areas; iv) BMX/Skate Parks.

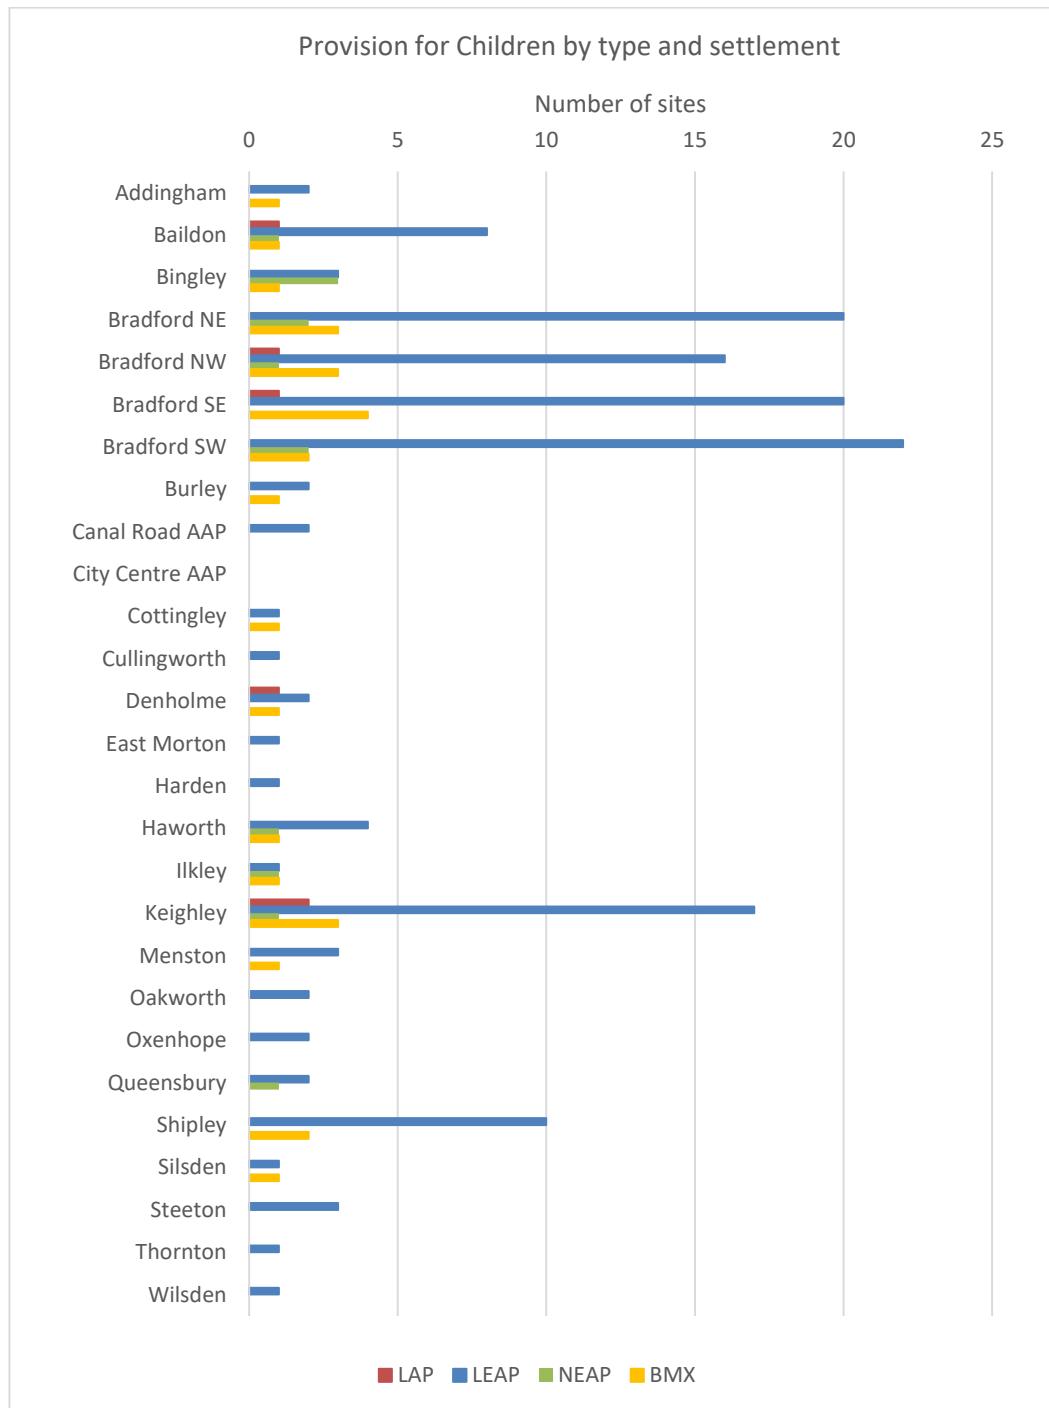

5.171 Figure 5.29 provides a breakdown of the different categories of play areas by settlement. The data shows that the majority of play areas within the District are classed as Local/Neighbourhood play areas – these usually have a range of equipment for all ages. The chart also shows, perhaps unsurprisingly, that Destination Play Areas are mainly concentrated in the larger settlements, either within the Regional City settlement areas or the Principal Towns.

5.172 It is notable that there is a limited amount of Doorstep Play Areas – these usually have a small number of pieces of equipment and are more tailored to younger children. Existing provision is focussed on the urban areas of Bradford and Keighley. In line with the ambitions of the Playable Spaces Strategy, the data helps to support the case for

additional provision of these spaces. Given the small size of these spaces it may be easier to introduce them into denser urban areas where large sites are limited.

5.173 Provision of BMX/Skate Park spaces is again mainly focused in the larger settlements. Such spaces are often co-located with other play area spaces in parks. Bradford Urban Area and Keighley see the highest levels of provision. Consideration should be given to the need for additional provision in some of the smaller settlements depending on the local demand for such facilities.

**Figure 5.29 Number of Provision for Children sites by type and settlement**

## Settlement Analysis

### City of Bradford, Shipley and Lower Bailldon

#### Bradford North East

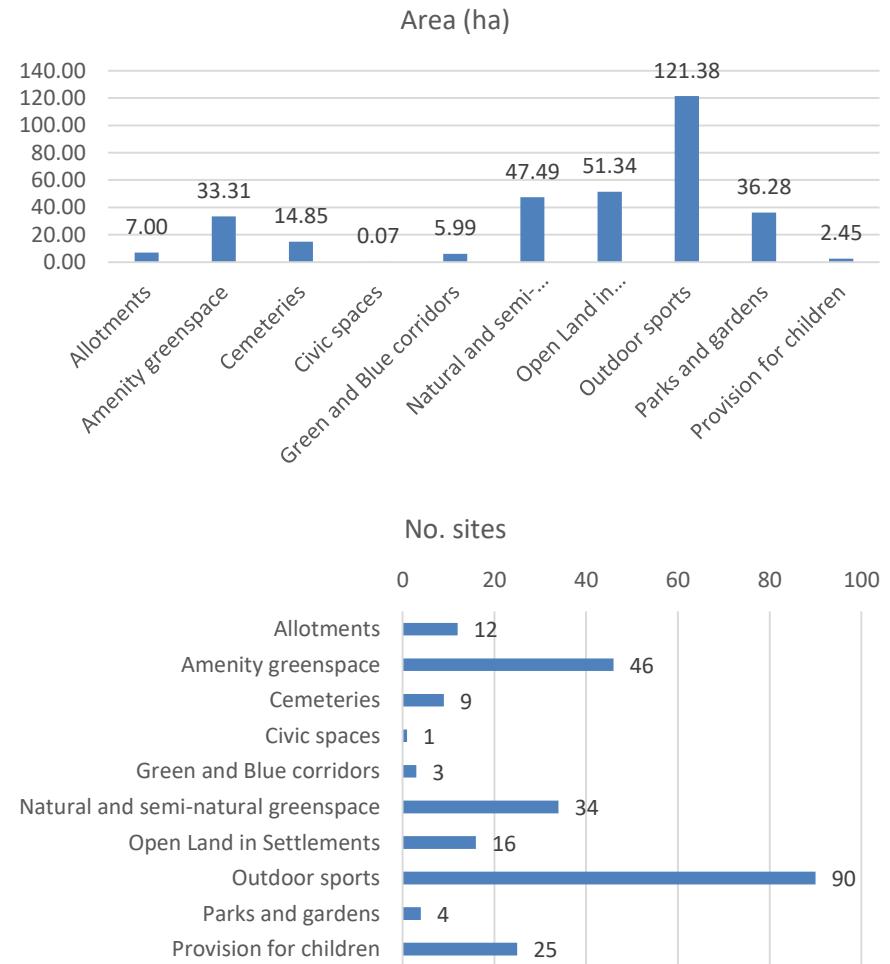

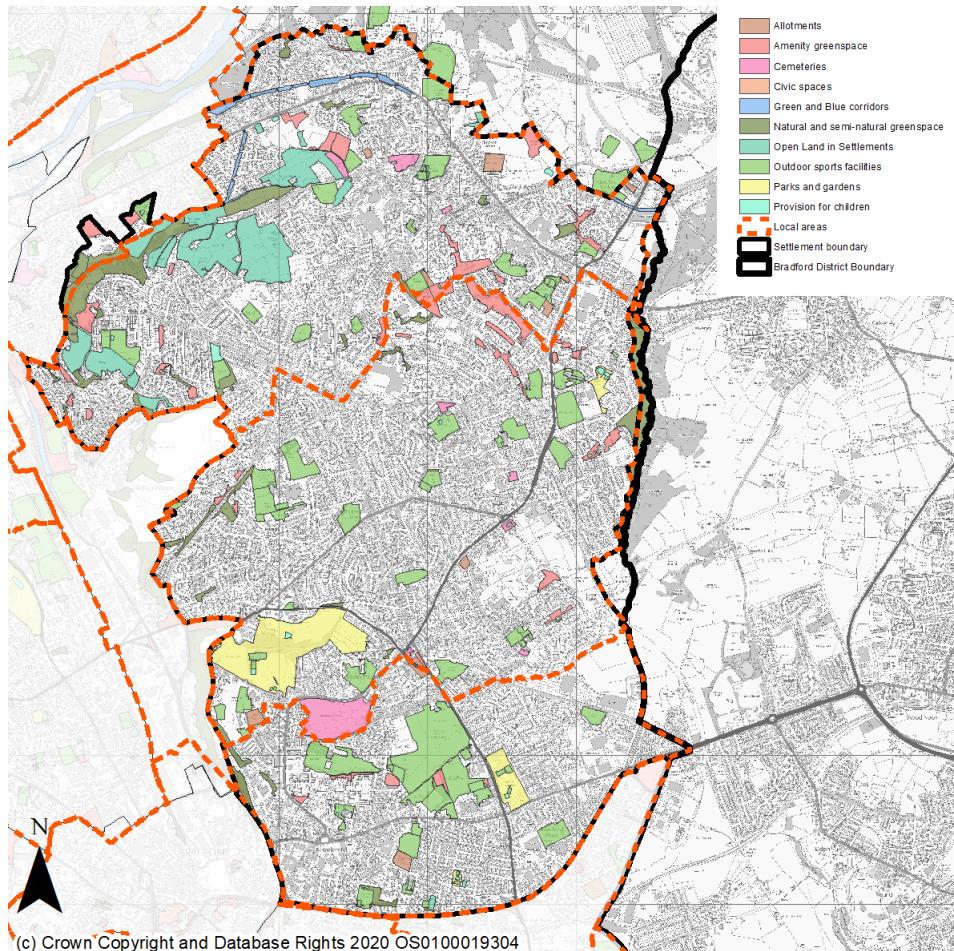

Table 5.22 Summary of provision priorities Bradford North East and deviation from the standards

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>N/A</b>	<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>
-10.93	-11.52	-7.56	-0.82	-11.94	-42.18	10.99	-40.02	-44.42	-11 (sites)

5.174 The settlement area of Bradford North East has **240 sites** identified as open space covering an area of **320.18ha**.

5.175 With a population of 89,668, Bradford North East requires 485.10ha of open space to meet the local standards. The figures show that there is a significant deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement.

5.176 Looking at the existing amount and range of open space sites present in this area, the figures show that there is a large number of outdoor sports sites (90 site covering 121.38ha) which include a golf course, a number of sports pitches, school playing fields and MUGAs. There is a moderate number of Amenity Greenspace sites (46), Natural and Semi-natural Greenspace sites (34) and Provision for Children sites (25).

5.177 In terms of the distribution of spaces, the map shows that there is considerable variation in the location of the various types of open space across the settlement area. In the Barkerend locality there is a concentration of outdoor sports open space (Myra Shay sports ground and Bradford Moor Golf Course) to the east of ring road. To the west of this area at Fagley there are much lower levels of provision of all types of space, just 6 sites. In the central Undercliffe and Eccleshill area, the spread of open space sites is again unbalanced with a concentration around Peel Park and Undercliffe Cemetery to the south west and around Eccleshill Park in the north east. There is much less provision in the centre of this locality, meaning that residents have to travel further to access certain types of open space. The provision and distribution of sites in the Wrose, Thackley and Idle locality is different again, with a substantial amount of Open Land in Settlements and Natural and Semi-natural Greenspace separating Wrose from Shipley and Thackley. This important open space buffer helps to provide a natural break between settlement areas and helps to define the individual character of the smaller localities.

5.178 There are a number of **key sites** within the Bradford North East including:

- Peel Park
- Myra Shay Recreation Ground
- Undercliffe Cemetery

- Bradford Moor Golf Course
- Idle Recreation Ground
- Eccleshill Recreation Ground
- Wrose Recreation Ground

5.179 Table 5.22 Summary of provision priorities Bradford North East provides a summary of the provision priorities for the Bradford North East settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that for all typologies (except the local Open Land in Settlements typology) Bradford NE has a deficit in provision when compared to the expected standards of provision for the size of settlement (in terms of population size) and therefore the priority level for increased provision for all typologies (except for Open Land in Settlements) is High.

5.180 There is significant variation in the level of deficiency for each type of open space and it should be recognised that in large built-up areas with high density developments, it is not always possible to substantially increase the amount of provision and therefore meet the standards. The analysis against the standards helps to highlight where there are acute problems and can act as a guide to show which types of open space are most needed in particular parts of the District.

5.181 In Bradford North East the typologies with the highest deficiency levels (deficits of around 40ha each) are Parks and Gardens, Outdoor Sports and Natural and Semi-Natural Greenspace. The area boasts the large municipal Peel Park within its boundaries, but other park spaces are small and limited to Bradford Moor Park, Eccleshill Park and Attock Park. There is no formal park provision in the Wrose, Thackley and Idle locality area and new provision here would help to redress the balance of park provision across the settlement area. In terms of Outdoor Sports provision, Bradford North East benefits from a large number of spaces including local recreation grounds, sports pitches, and school playing fields, as well as the more strategic site at Myra Shay. Consideration needs to be given as to whether additional outdoor sports sites can be provided within the settlement area or whether improvements to existing provision and better access to sites provides a suitable alternative.

5.182 In terms of the provision of Natural and Semi-natural Greenspace, there are a limited number of sites located within the settlement area, notable areas are located along the boundary with Shipley and includes the Wrose plantation area of woodland. Further to the north just outside of the settlement area, there are areas of Natural and Semi-natural Greenspace which have not been recorded in the audit but are accessible to some residents and include the Buck Wood country park. This partly provides some compensation for the low levels of space in North East Bradford. However, given the importance of providing access to nature, the provision of additional Natural and Semi-natural Greenspace should be a high priority in this settlement area.

5.183 The typologies with the next highest deficiency levels (deficits of around 11ha each) are Green and Blue Corridors, Amenity Greenspace and Allotments. Additional provision of these typologies will be important to help with active travel, to help introduce more green spaces into new housing developments and to provide areas of land for people to grow their own food.

5.184 There is a notable deficit of play area sites for children and young people and the existing sites in this area are not particularly well distributed. There is a specific deficit of provision in the central part of the Undercliffe and Eccleshill area. There is clearly a high priority for additional provision and opportunities to bring forward additional sites should be targeted in those residential areas which currently have limited local provision.

5.185 The audit also demonstrates that there is a deficit of cemetery open space in the Bradford North East settlement area. There are a number of cemetery spaces across the area but no provision within the Barkerend locality. The strategic nature of cemetery provision means that additional sites may be provided in other parts of the District. However, should an opportunity for provision be identified in the Bradford North East area this would help to reduce the current deficit. Although in terms of the level of deficit the priority for increased provision is high, consideration must be given to finding the most suitable location across the Regional City sub-area.

## Bradford North West

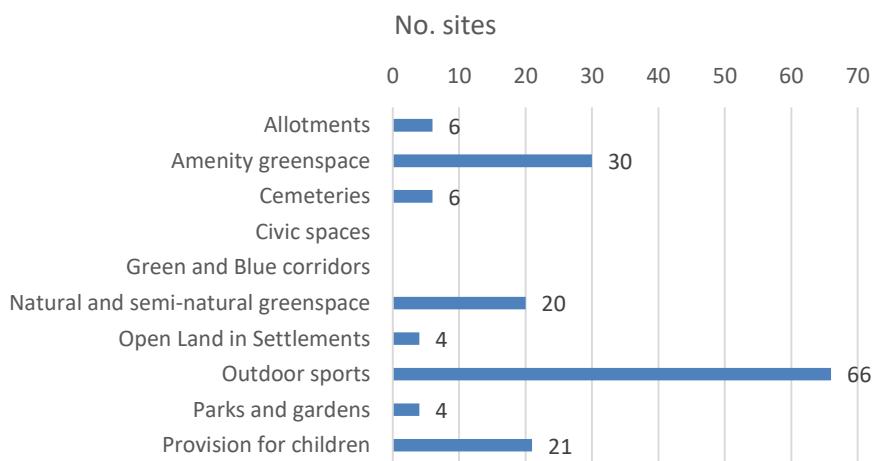

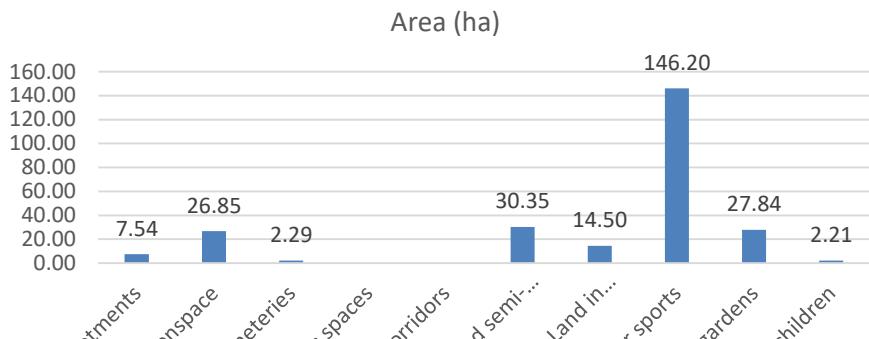

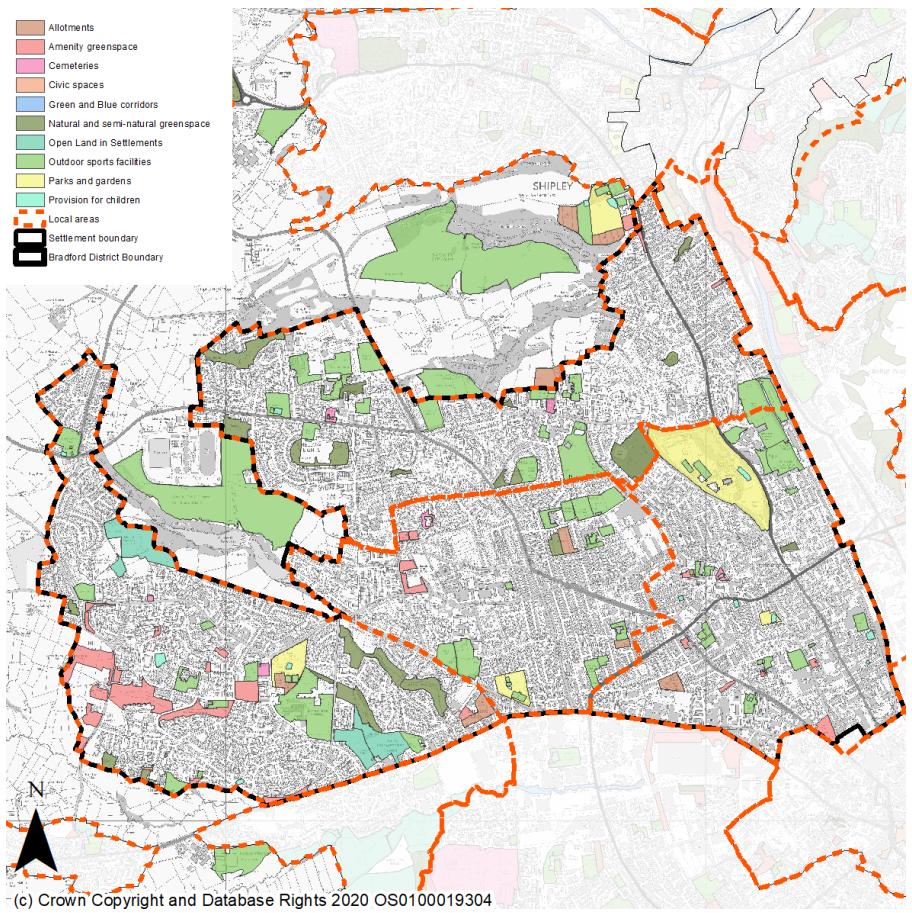

Table 5.23 Summary of provision priorities Bradford North West

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>N/A</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>HIGH</b>	<b>HIGH</b>
-7.47	-10.67	-16.47	-0.75	-15.00	-44.67	-19.26	11.16	-39.68	-9 (sites)

5.186 The settlement area of Bradford North West has **157 sites** identified as open space covering an area of **257.78ha**.

5.187 With a population of 75,023, Bradford North West requires 405.87ha of open space to meet the local standards. The figures show that there is a significant deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement.

5.188 Looking at the existing amount and range of open space sites present in this area, the figures show that there is a substantial amount of Outdoor Sports provision in this area. However, this high level of provision is mainly comprised of Northcliffe Golf Course (37.60ha), West Bradford Golf Course (30.13ha) and a high number of School Playing fields (30 sites covering 45.75ha). The typologies with the next highest number of sites are Amenity Greenspace (31), Natural and Semi-natural Greenspace (20), and Provision for Children (21).

5.189 In terms of the distribution of spaces across the settlement area the map shows that there is considerable variation between the four smaller locality areas. In Manningham there is a variety of types and sizes of spaces, with the large municipal Lister Park being a focal point for the area and some larger school playing fields at Bradford Grammar School and St Bede's and St Joseph's Catholic College. In the Girlington area sites are generally smaller in size and poorly dispersed. There is a notable lack of space in the central part of this area where high density terraced housing dominates leaving little room for any open space. In the Allerton locality there is a clear belt of open space sites running from east to west. The Chellow Dean Beck area in particular plays an important role in providing green space to the northern part of Allerton and southern part of Chellow Heights. The Allerton area sees a good variety of different types of open space providing a good level of choice to residents in this area. In the Heaton locality, there is a reasonable spread of spaces, although there is more limited provision in the Frizinghall area, and there is less variety in the types of spaces with a higher concentration of outdoor sports sites, particularly school playing fields.

5.190 There are a number of **key sites** within the Bradford North West settlement area including:

- Lister Park
- Ladyhill Park
- West Park
- Chellow Dean Beck
- Northcliffe Golf Club
- West Bradford Golf Course

5.191 Table 5.23 provides a summary of the provision priorities for the Bradford North West settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that for all typologies (except Outdoor Sports) Bradford NW has a deficit in provision when compared to the expected standards of provision for the size of settlement (in terms of population size) and therefore the priority level for increased provision for all typologies (except for Outdoor Sports) is High. The amount of Outdoor Sports space available in Bradford NW is above the standard expected provision level and therefore there is a low priority for the provision of this type of space.

5.192 In Bradford North West, the typologies with the highest levels of deficiency are Natural and Semi-natural Greenspace and Parks and Gardens. There is some provision outside of the settlement around Chellow Dean reservoir which although not included in the audit is accessible to some residents in the Allerton, Girlington and Heaton localities and may provide some compensatory provision. However, additional provision of this typology should be a high priority to ensure that residents can benefit from access to such spaces.

5.193 The typologies with the next highest deficiencies are Open Land in Settlements, Cemeteries and Green and Blue Corridors. The Open Land in Settlements typology is a locally derived typology and may not always be provided in every area. This type of space is often a result of how settlements have grown overtime and constitute areas of land between settlements which provide a natural buffer and which support the character or setting of a settlement. The strategic nature of cemetery provision means that additional sites may be provided in other parts of the District. However, should an opportunity for provision be identified in the Bradford North West area this would help to reduce the current deficit. The absence of Green and Blue Corridor space is partly due to the nature of the area with limited natural corridors being present. However, the Natural and Semi-natural Greenspace along the route of Chellow Beck may also fulfil the role of Green and Blue Corridor space. Any additional provision of this type of space should look to help connections between spaces as part of the wider Green Infrastructure network.

5.194 The findings from the audit show that there is a notable deficiency of children's play areas within the settlement area and the dissemination of the existing spaces is particularly inequitable, with very limited provision in the Girlington area. The provision of additional play area facilities should be considered as a priority in this area, especially as this part of the settlement area has overall poor levels of open space provision and also high levels of deprivation.

5.195 There is also a deficiency of Allotment and Amenity Greenspace sites within the North West settlement area. There are just six existing allotment sites in the area, with limited provision available in the Heaton and Manningham localities. The provision of additional sites in these areas is again a high priority, although consideration should be given to the findings of the Open Space Needs and Demands assessment to ascertain the specific demand levels. The amount of Amenity Greenspace in the settlement area is disproportionately distributed between the locality areas. There is a notable amount of provision on the Allerton area which reflects the more suburban residential developments which often incorporate this type of space. There is notably less provision in the

Girlington and Manningham areas where older, high density terraced properties dominate the urban environment. Any new development within these areas should prioritise the provision of Amenity Greenspace.

## Bradford South East

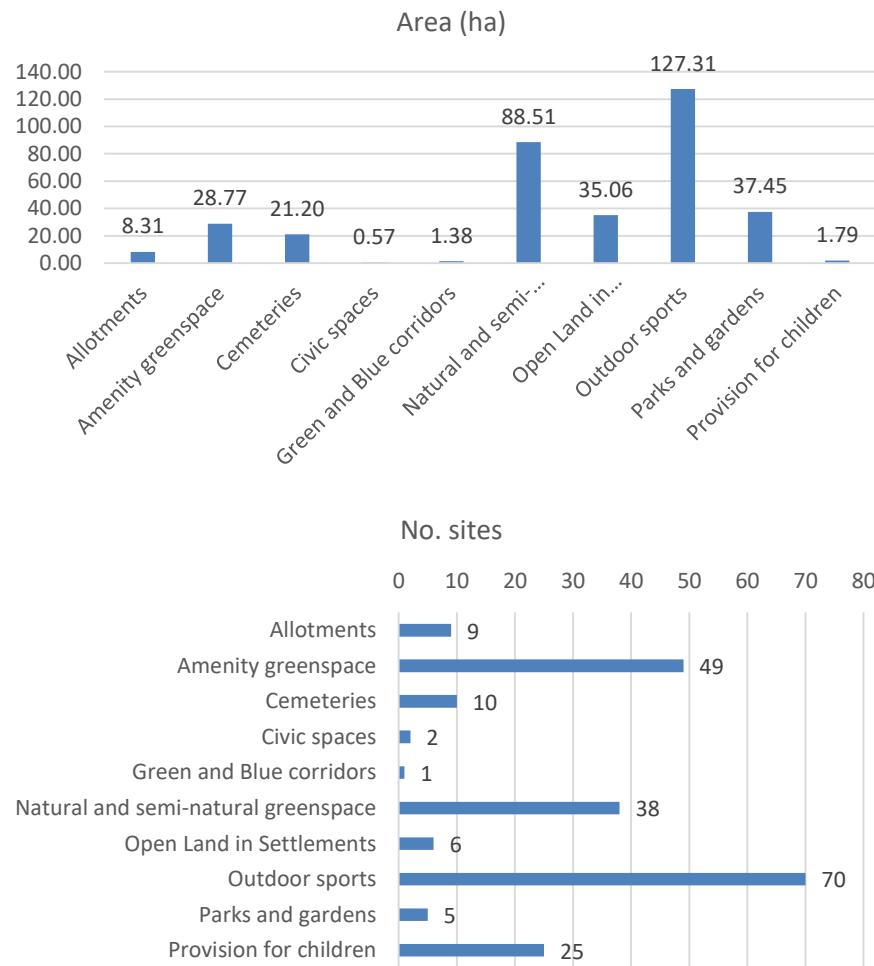

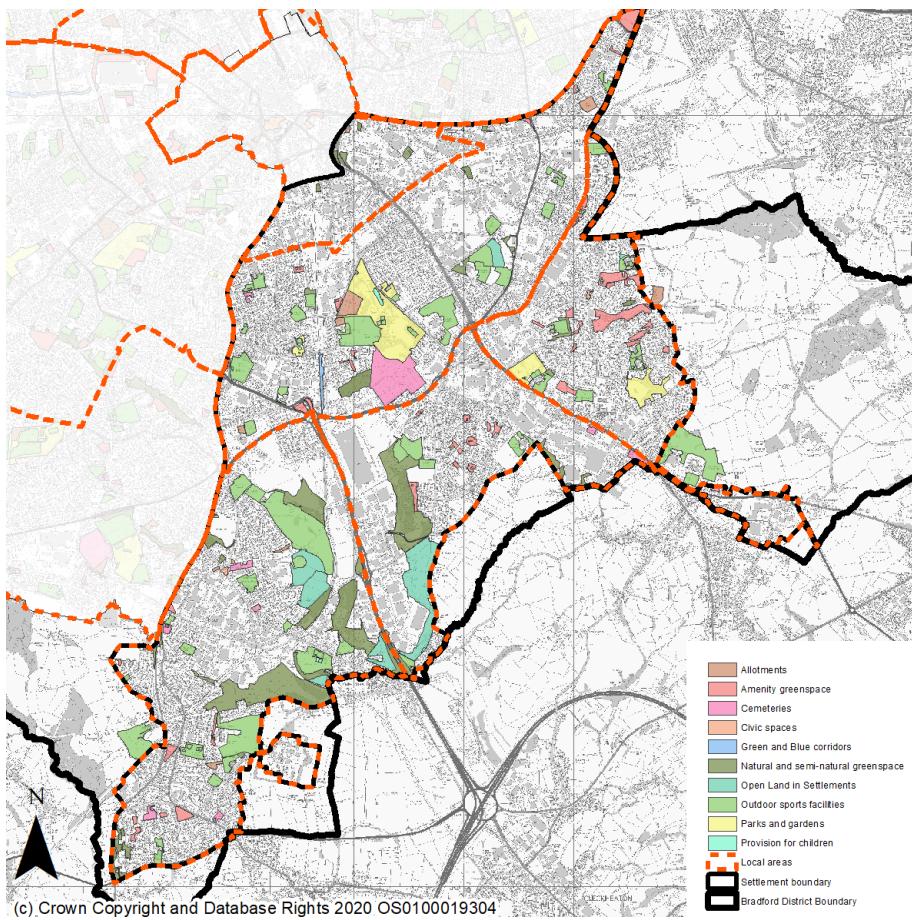

Table 5.24 Summary of provision priorities Bradford South East

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>LOW</b>	<b>LOW</b>	<b>N/A</b>	<b>HIGH</b>	<b>LOW</b>	<b>LOW</b>	<b>LOW</b>	<b>HIGH</b>	<b>LOW</b>
-3.45	-0.64	6.49	-0.01	-10.38	29.68	8.59	21.43	-15.49	1 (sites)

5.196 The settlement area of Bradford South East has **215 sites** identified as open space which cover a total area of **350.37ha**.

5.197 With a population of 58,822, Bradford South East requires 318.23ha of open space to meet the local standards. The figures show that the actual amount of open space serving the South East area is greater than this. Although there is a positive deviation from the overall requirement figure, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.198 Looking at the existing amount and range of open space sites present in this area, the figures show that there is a large proportion of outdoor sports space in this settlement area accounting for 70 sites covering an area of 127.31ha. There is also a large amount of Natural and Semi-natural Greenspace (88.51ha) and Open Land in Settlements space (35.06ha). The data also shows that there are a large number of Amenity Greenspace sites (50 sites) but which only cover an area of 29.24ha. There are notably low levels of Green and Blue Corridor space (just 1 site covering 1.38ha) and Civic space.

5.199 In terms of the distribution of spaces across the settlement area the map shows that there is a reasonable spread of sites throughout the area. However, the variety of spaces differs fairly substantially. The Bowling locality has a reasonably good range of different types of space with the large municipal Bowling Park and Bowling Cemetery providing a focal point of open space in this area. The Holme Wood area also sees a relatively good range of sites with two parks and a number of Amenity Greenspaces. The distribution and range of sites in the Bierley area is less equitable with a notable lack of sites in the industrial areas along Tong Street and the M606. Within the Wyke and Low Moor locality there is a notable concentration of Outdoor Sports sites, Natural and Semi-natural Greenspace and Open Land in Settlements space. There is no designated park space in this area and again a notable absence of space around the industrial areas at New Works Road.

5.200 There are a number of **key sites** within the Bradford South East settlement area including:

- Bowling Park
- Bowling Cemetery
- Knowles Park
- Pit Hill Park
- Victoria Park (Playing Field)
- Low Moor Banks Nature Reserve
- South Bradford Golf Course

5.201 Table 5.24 provides a summary of the provision priorities for the Bradford South East settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that for five of the typologies (Cemeteries, Natural and Semi-natural Greenspace, Open Land in Settlements, Outdoor Sports and Provision for Children) there are positive deviations from the standard provision requirements which indicates that there are good levels of provision of these types of spaces in this area. Amenity Greenspace has a slight negative deviation from the standard but this is negligible compared to other typologies and is partially compensated for by the large amounts of Open Land in Settlements space present in the sub-area. There are three typologies with larger negative deviations and these should be a high priority for additional provision.

5.202 The typology with the highest deficit of space is Parks and Gardens. Although there are a number of key park spaces within this settlement area, for example Bowling Park, there is still an insufficient amount of space to meet the standards for the size of the population. However, there are some sites within the area which may serve a dual purpose therefore the deficit may not be as significant as the data suggests. Victoria Park in Oakenshaw is classified as an Outdoor Sports site, as the majority of the site fulfils the playing field/recreation ground role. However, as the name suggests as a whole it may be considered as a park and therefore would help to compensate for the current lack of provision. Nevertheless, the provision of additional park space in the Bradford South East settlement area should be considered as a high priority in order to help rebalance the levels of provision between the different types of open space and ensure adequate provision for the local communities.

5.203 The typology with the next highest level of deficiency is Green and Blue Corridors. The absence of this type of space is partly due to the nature of the area with limited natural corridors being present. Additional provision of this type of space should could be aligned with the identification of opportunities for active travel routes and greenways as part of the wider programme of Green Infrastructure improvements in this area.

5.204 The data also indicates that there is a modest deficit of Allotment space within the Bradford South East settlement area. The existing current provision is made up of nine sites with notable amounts in the Bowling and Low Moor and Wyke areas. There is currently no provision in the Bierley area and only one site on the edge of the Holme Wood area which is comprised of Springfield Community Garden. The priority for increased provision should therefore be focussed on these two areas to help ensure adequate access to allotment space for all parts of the settlement area. Consideration should also be given to the findings of the Open Space Needs and Demands assessment to inform the levels of demand for additional space.

## Bradford South West

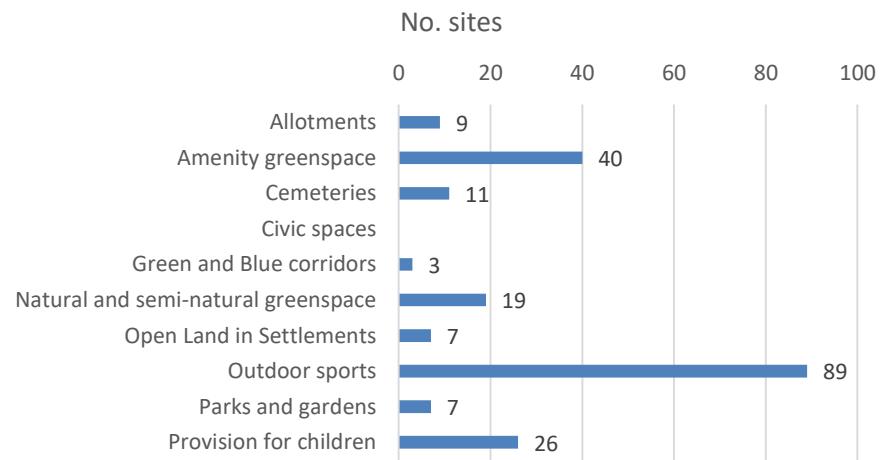

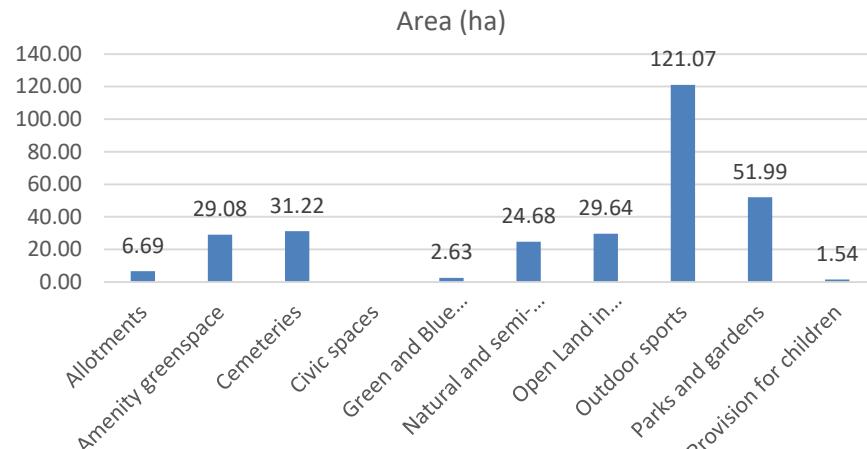

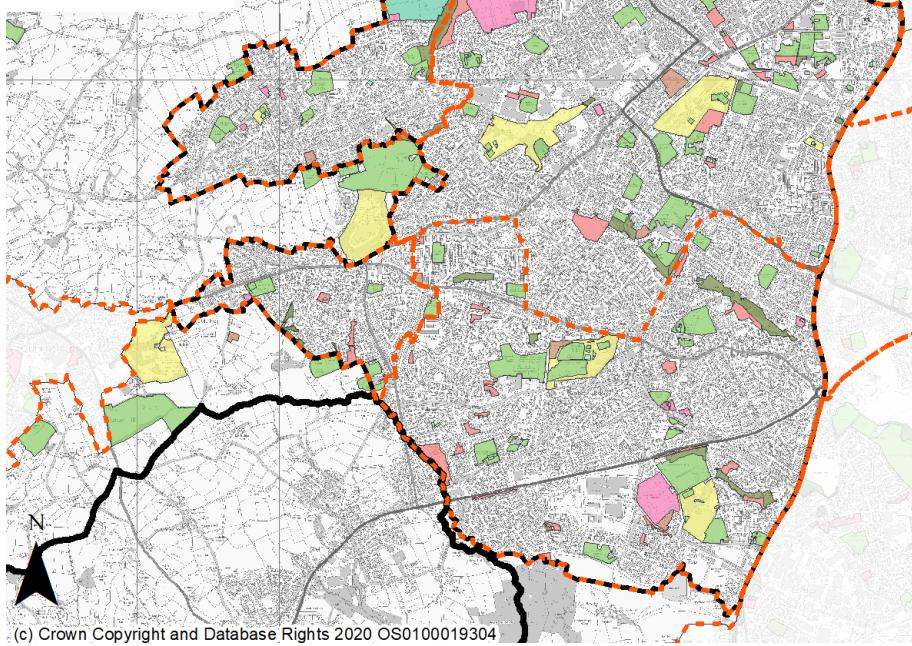

Table 5.25 Summary of provision priorities Bradford South West

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>N/A</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>
-12.34	-18.51	7.42	-0.95	-16.41	-70.51	-13.20	-50.27	-33.68	-12 (sites)

5.205 The settlement area of Bradford South West has **211 sites** identified as open space which cover a total area of **298.53ha**.

5.206 With a population of 95,188, Bradford South West requires 514.97ha of open space to meet the local standards. The figures show that there is a significant deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement area.

5.207 Looking at the existing amount and range of open space sites present in this area, the figures show that the area benefits from a large number of Outdoor Sports sites (89) covering an area of 121.07ha. The amount of Parks and Garden space is also considerable covering a total area of 51.99ha distributed over 7 sites and including the large municipal Horton Park, as well as Horton Bank Country Park. The settlement area also has two relatively large cemetery sites: Scholemoor and North Bierley, which play a strategic role at a district level. However, the amount of allotment space, civic space and Green and Blue Corridor space is all limited.

5.208 In terms of the distribution of spaces across the settlement area the map shows that there is a good range and spread of provision in each of the locality areas and most residents have reasonably good access to a variety of spaces. However, as with any large urban area there are communities where there are lower amounts of provision. This is perhaps most notable in Little Horton to the west of Manchester Road, and in Royds and Wibsey to the north of Halifax Road.

5.209 There are a number of **key sites** within the Bradford South West settlement area including:

- Harold Park
- Horton Park
- Horton Bank Country Park
- Bracken Hill Park
- Wibsey Park
- Scholemoor Cemetery
- North Bierley Cemetery
- Clayton Golf Course
- Horsfall Stadium

5.210 Table 5.25 provides a summary of the provision priorities for the Bradford South West settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that only one typology (Cemeteries) has notably more provision than the requirement. All the other typologies demonstrate a deficiency of varying degrees. The Bradford South West settlement area has the highest proportion of the population in the District and is a

densely developed and populated urban environment. Therefore, the application of the standards to this area must be approached with a level of caution as it will never be fully possible to retrofit the levels of provision to meet the prescribed standards. However, the analysis against the standards can help to highlight which typologies of open space should be given the highest priority when considering additional provision in this settlement area.

- 5.211 The typology with the greatest deficit against the standards is Natural and Semi-natural Greenspace. For the size of the settlement area, the existing provision levels are relatively low with just 19 sites covering an area of 24.68ha. To ensure the population of Bradford South West has adequate access to nature, the provision of additional Natural and Semi-natural Greenspace sites should be a key priority for this settlement area. It may require innovative ideas to incorporate natural space into this heavily urbanised environment, including through the planting of street trees, introduction of SuDS schemes, green roofs and other interventions.
- 5.212 The Outdoor Sports typology is the typology with the next highest deficit. Existing provision comprises of a number of medium-sized sites which are reasonably well distributed across the three locality areas. However, for the size of the population additional provision is required to meet the standards. Further analysis is required, along with consideration of the Open Space Needs and Demands assessment and Playing Pitch Strategy, to understand the exact requirements for additional outdoor sports sites.
- 5.213 There is also a notable deficit of Parks and Garden space, even with the significant level of existing provision. However, there are parts of the South West area which have poor access to the existing provision, particularly around the Leaventhorpe and Four Lane Ends area. The priority for additional park space in this settlement area is high and opportunities to provide additional space and/or improve access to the existing sites should be pursued.
- 5.214 There is a deficit of up to 12 play area sites in this settlement area. The existing provision of 26 sites is the highest in the District but its distribution is poor with a distinct lack of provision in the central part of the Great and Little Horton locality, as well as the north east and north west parts of Royds and Wibsey, and the Four Lane Ends area. Some of these areas are densely populated and in order to meet the aims of the Playable Space Strategy, the provision of additional play area spaces in Bradford South West should be a top priority. The Great and Little Horton locality has notable levels of deprivation and this coincides with the deficiency of open space sites. The links between poor health and lack of greenspace are well documented, but the findings of the audit help to highlight the reality of the situation in terms of where there are poor levels of open space provision.
- 5.215 The findings from the audit also show deficits in Allotments, Amenity Greenspace, Green and Blue Corridors, Open Land in Settlements space. In terms of allotment space there are just 9 existing sites covering an area of 6.69ha in the settlement area and there is a reasonable spread of sites. However, some parts of the Clayton and Clayton Heights locality and the Royds and Wibsey locality have poor access to spaces. The findings of the Open Space Needs and Demands assessment should be considered in conjunction with the audit to determine where additional sites should be located.

- 5.216 Opportunities to provide additional Amenity Greenspace should be explored as part of any regeneration of cleared sites within the settlement area, as well as requiring provision as part of new development. With a significant deficit of this type of space, partly due to the large areas of dense terraced housing from the late 19<sup>th</sup> and early 20<sup>th</sup> centuries which did not incorporate this type of space, unlike the later suburban estates which show a higher concentration of such space.
- 5.217 Any additional provision of Green and Blue Corridor space should take advantage of the natural assets such as Bradford Beck and also look at connections to existing active green travel routes such as the Spen Valley Greenway.
- 5.218 The Open Land in Settlements typology is a locally derived typology and may not always be provided in every area. This type of space is often a result of how settlements have grown overtime and constitute areas of land between settlements which provide a natural buffer and which support the character or setting of a settlement.
- 5.219 The strategic nature of cemetery provision means that additional sites may be provided in other parts of the District. However, should an opportunity for provision be identified in the Bradford South West area this would help to reduce the current deficit.

## Bradford City Centre

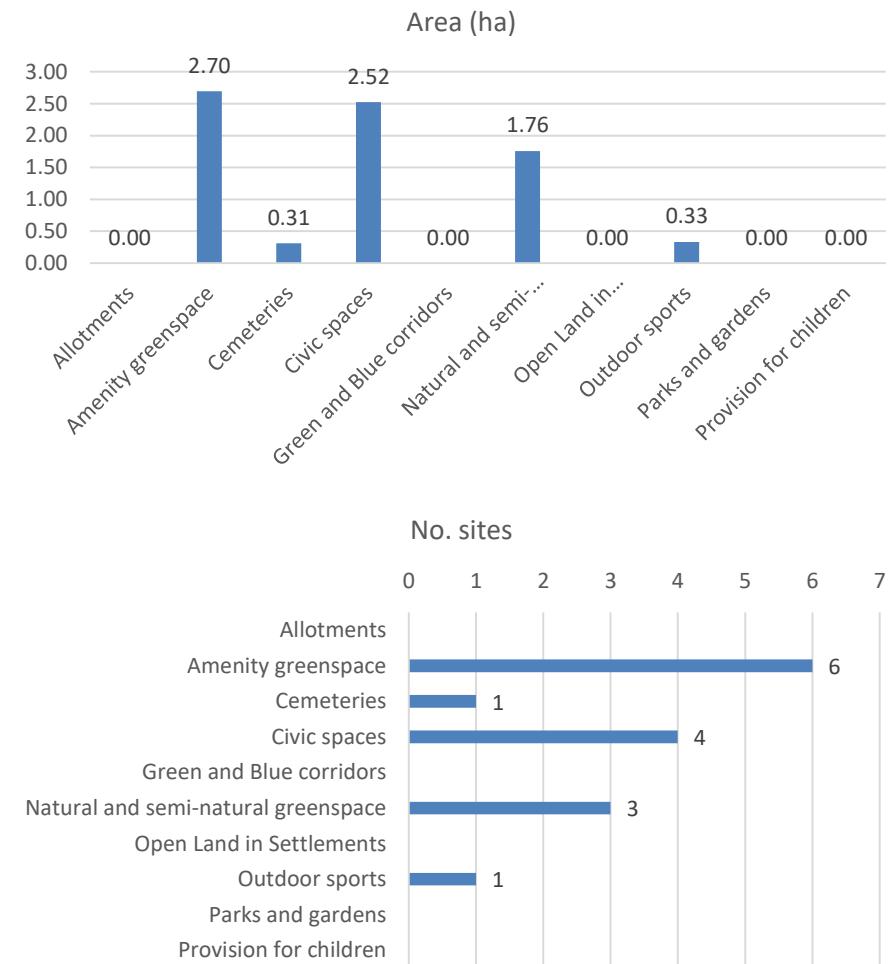

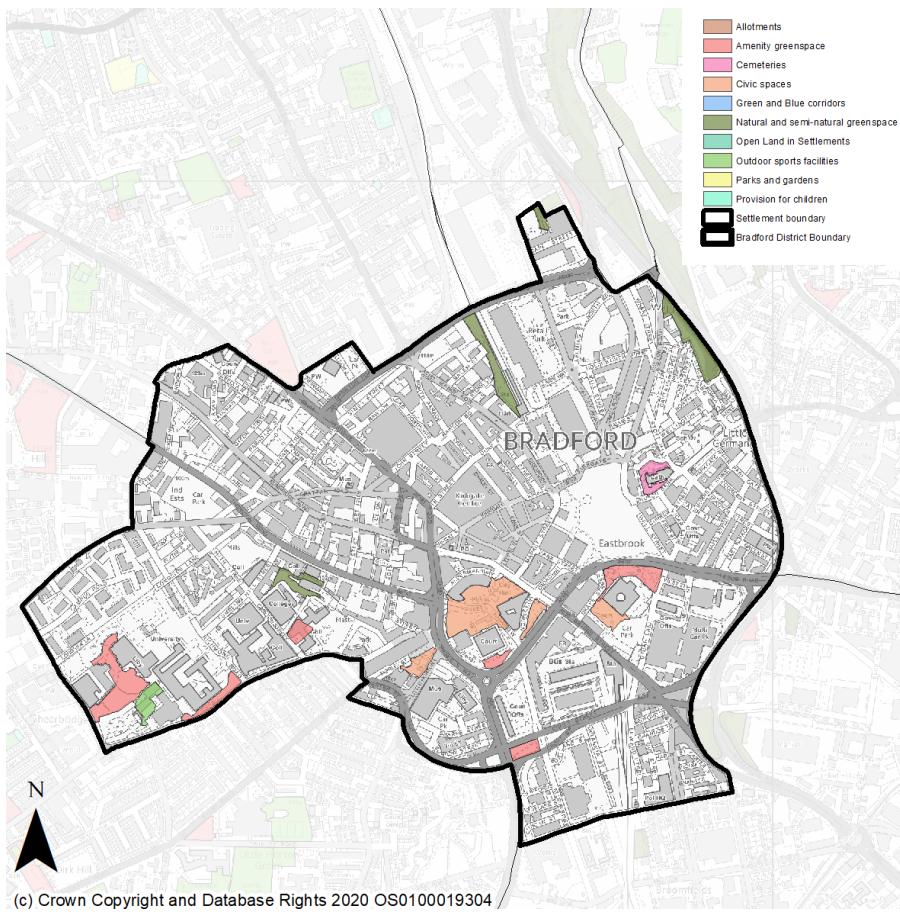

Table 5.26 Summary of provision priorities Bradford City Centre

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>LOW</b>	<b>MODERATE</b>	<b>N/A</b>	<b>HIGH</b>	<b>MODERATE</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>MODERATE</b>
<b>-0.71</b>	<b>0.93</b>	<b>-0.57</b>	<b>2.49</b>	<b>-0.71</b>	<b>-1.77</b>	<b>-1.59</b>	<b>-6.02</b>	<b>-3.18</b>	<b>-1</b>

5.220 The Bradford City Centre settlement area has **15 sites** identified as open space covering an area of **7.63ha**.

5.221 With a population of 3,532, Bradford City Centre would require 19.11ha of open space to meet the local standards. The figures show that there is a notable deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement area.

5.222 Looking at the existing amount and range of open space sites present in this area, the figures show that there are five typologies with some level of provision in the settlement area. However, there are also five typologies (Allotments, Green and Blue Corridors, Open Land in Settlements, Park and Gardens and Provision for Children) without any provision. The data shows that, unsurprisingly there are reasonable levels of Amenity Greenspace and Civic Space within the city centre.

5.223 In terms of the distribution of spaces across the settlement area the map shows that there are large parts of the city centre where there is no provision of open space. This is partly due to the built form and character of the city centre, however, consideration needs to be given to creating new spaces to help improve the environment where opportunities arise, for example with the development of the new market site and the urban village at the 'top of town'.

5.224 There are a number of **key sites** within Bradford City Centre including:

- City Park / Centenary Square
- Bradford University Campus

5.225 Table 5.26 provides a summary of the provision priorities for the Bradford City Centre settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that just two typologies exceed the standards, with the remaining eight typologies all showing varying a degree of deficiency. In terms of the provision of additional open space within the city centre, careful consideration must be given to the types of open space to be provided. The amount of available space within the city centre is at a premium, with competing land uses, therefore where opportunities arise to provide new open space, it must be able to deliver a substantial benefit for both local residents and visitors.

5.226 The typologies with the highest deficiencies are Outdoor Sports, Parks and Gardens and Provision for Children sites. The city centre would benefit from the additional provision of these types of open space. The city centre is an accessible location with good public transport links. The provision of key facilities in such a location would not only provide for the residents living in the city centre but would also be available to the residents in the wider district as well as other visitors, helping to promote the area as a key destination.

5.227 The findings of the audit show that there are small deficits of Allotments, Cemeteries, Green and Blue Corridors, Natural and Semi-natural Greenspace, and Open Land in Settlements space within the city centre. However, these types of spaces are not always expected to be provided in a city centre location. The priority for the additional provision of these types of spaces is therefore only moderate. Alternative forms of provision could be considered, for example instead of providing formal allotment space, urban growing boxes could be provided within the public realm to promote local food growing.

## Shipley and Canal Road Corridor

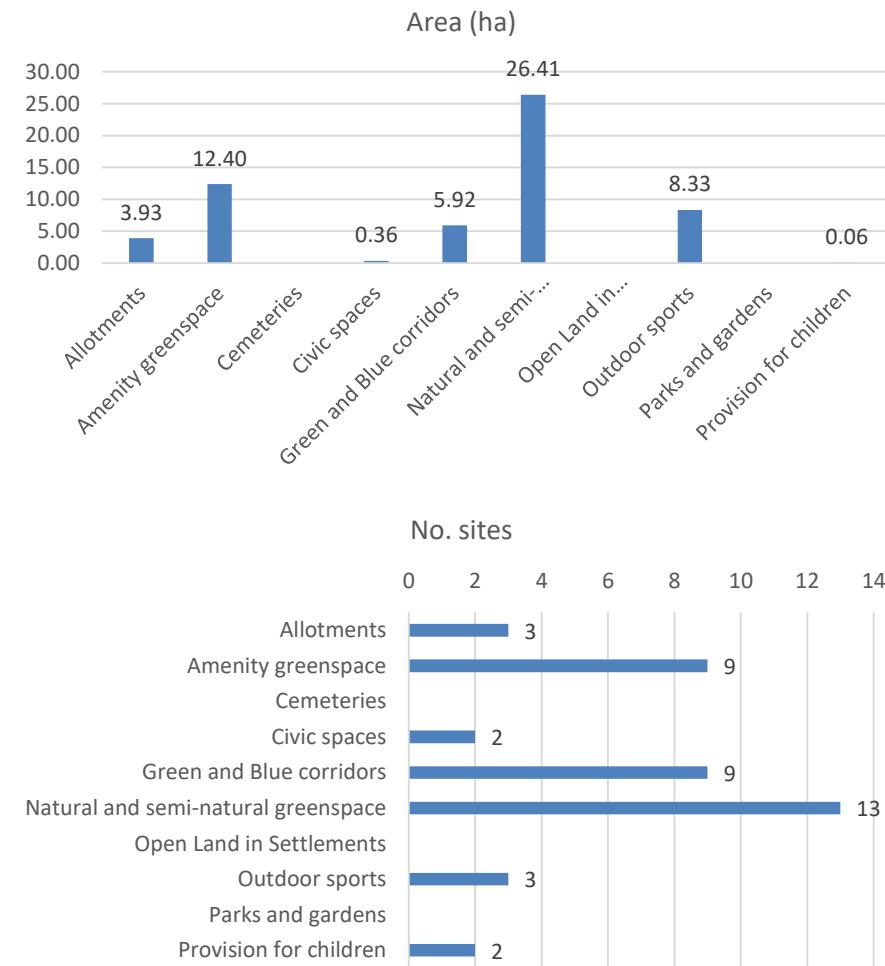

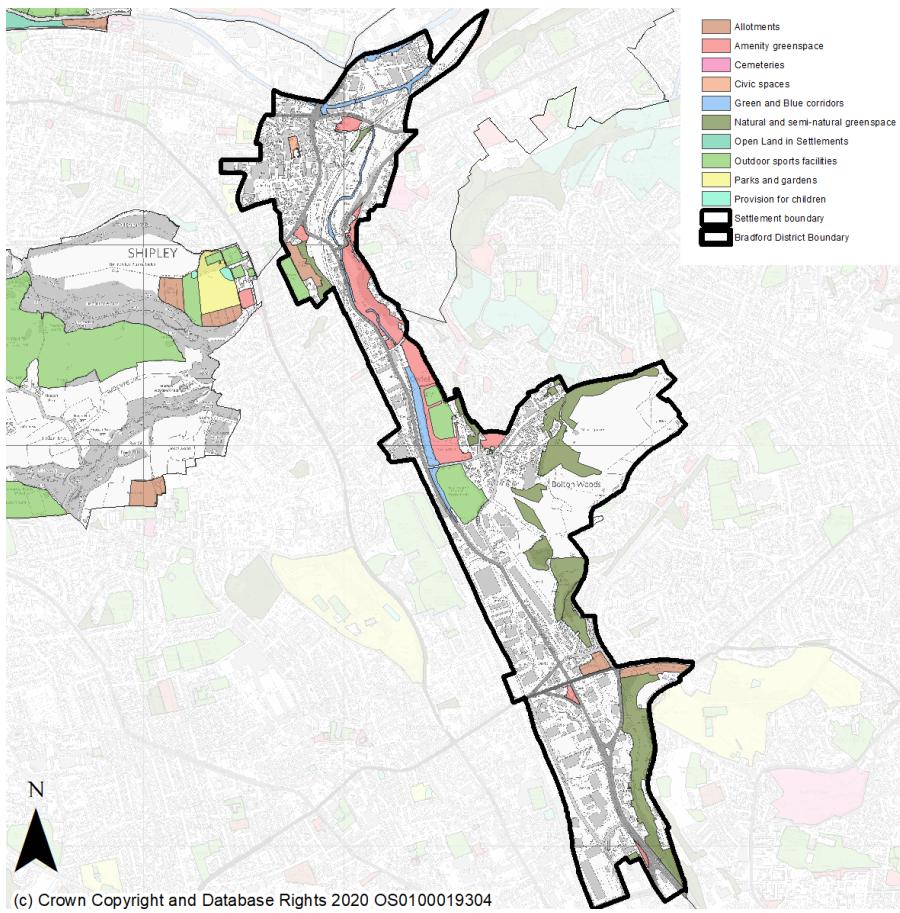

Table 5.27 Summary of provision priorities Shipley and Canal Road Corridor

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	LOW	MODERATE	N/A	LOW	LOW	HIGH	LOW	HIGH	LOW
3.65	11.71	-0.35	0.34	5.65	25.03	-0.62	5.83	-1.25	1 (site)

5.228 The Shipley and Canal Road Corridor settlement area has **41 sites** identified as open space covering an area of **57.42ha**.

5.229 With a population of 1,386, the Shipley and Canal Road Corridor settlement area requires 7.50ha of open space to meet the local standards. The figures show that the actual amount of open space serving the Shipley and Canal Road Corridor area is significantly greater than the requirement. Although there is a positive deviation from the overall requirement figure, there is some imbalance between the different typologies of open space that currently exist in the settlement.

5.230 The findings of the audit work indicate that there is a disproportionate level of provision for the size of the population in this area. However, this settlement area is located between the North East and North West settlement areas and offers a level of provision to the communities of these areas and the positive deviations in the corridor area in part make up for the deficiencies in the other areas of Bradford.

5.231 There are a number of **key sites** within the Shipley and Canal Road Corridor settlement area including:

- King George V Memorial Playing Fields
- Bradford Beck
- Red Beck Allotments
- Queens Road Allotments
- Bolton Hall Woodland

5.232 Table 5.27 provides a summary of the provision priorities for the Shipley and Canal Road Corridor settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that for seven out of the ten typologies there is a positive deviation from the standard and indicates a good level of provision of those types of open space for the residents in the Shipley and Canal Road Corridor area. However, there are three typologies which show a slight deficit of space in this area.

5.233 Of particular note is the deficit of Parks and Gardens open space in this settlement area, although there are other types of open space such as Amenity Greenspace and Outdoor Space which play a similar role and in part provides compensatory provision. Future opportunities to rebalance the different open space sites could see some of these spaces be developed into a formal park space.

5.234 There are also small deficiencies of cemetery open space and Open Land in Settlements space. Cemeteries are usually provided at a sub-area level and therefore the lack of provision in this small settlement area is not of particular concern. The Open Land in Settlement typology is locally derived and not expected to be provided in every settlement area. Again the deficit of provision is not of particular concern and other typologies, such as Amenity Greenspace or Natural and Semi-natural Greenspace play a similar role and provide an alternative provision.

## Shipley

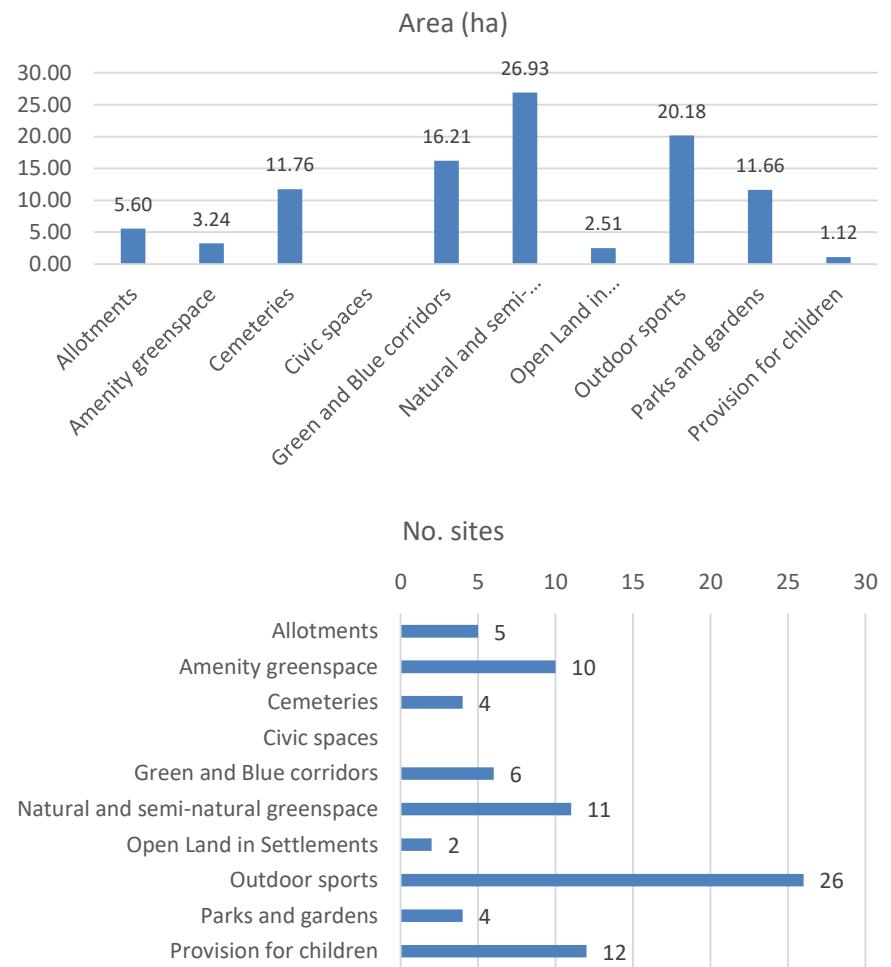

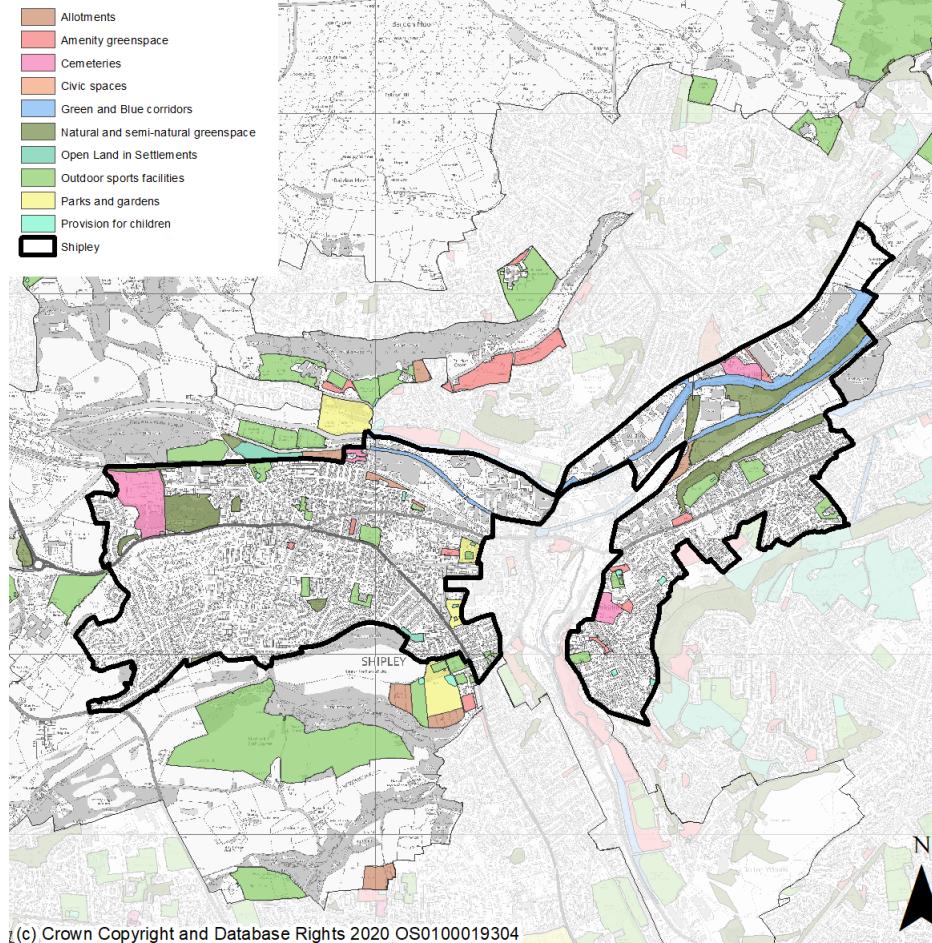

Table 5.28 Summary of provision priorities Shipley

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	MODERATE	LOW	N/A	LOW	LOW	HIGH	HIGH	HIGH	LOW
2.02	-5.72	7.28	-0.18	12.63	9.02	-5.55	-12.06	-4.46	5 (sites)

5.235 The Shipley settlement area has **80 sites** identified as open space covering an area of **99.21ha**.

5.236 With a population of 17,912, Shipley requires 96.90ha of open space to meet the local standards. The figures show that the actual amount of open space serving Shipley is slightly greater than the requirement. However, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.237 Shipley demonstrates a good level of provision of Natural and Semi-natural Greenspace and Green and Blue Corridors, partly due to the River Aire and Leeds and Liverpool Canal running through this settlement. There is also a good level of cemetery space, which is mainly accounted for by the municipal Nab Wood cemetery. There is a significant number of play areas (12 sites in total).

5.238 There are a number of key sites within the Shipley settlement area including:

- Roberts Park
- Northcliffe Park
- Nab Wood Cemetery
- Saltaire Sports Ground
- Northcliffe Golf Course
- Leeds and Liverpool Canal
- River Aire

5.239 Table 5.28 provides a summary of the provision priorities for the Shipley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that for five typologies (Allotments, Cemeteries, Green and Blue Corridors, Natural and Semi-natural Greenspace and Provision for Children) there is a positive deviation from the standards and indicates that there is a good level of provision of these types of spaces for the residents of this area.

5.240 There are five typologies with varying degrees of deficiency of provision. In particular, the Outdoor Sports typology has a significant deficit of space and should be a high priority for additional provision where the opportunities arise.

5.241 There is also a notable deficit of Parks and Gardens space and Open Land in Settlement Space in Shipley. Even with the existing two well-used parks (Roberts Park and Northcliffe Park) there is still insufficient space for the size of the population. Again the provision of additional parks space should be a high priority for this settlement area. The Open Land in Settlement typology is locally

derived and not expected to be provided in every settlement area. The deficit of provision is not of particular concern and other typologies, such as Natural and Semi-natural Greenspace play a similar role and provide an alternative provision.

5.242 The deficit of Amenity Greenspace is of moderate priority for additional provision. The high levels of natural and semi-natural greenspace in the settlement play a similar role to Amenity Greenspace and can be seen as providing compensatory provision.

## Airedale

### Baildon

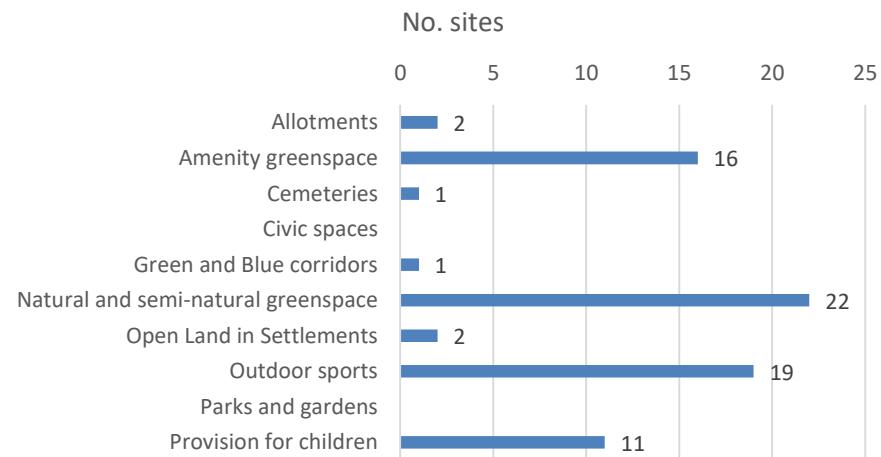

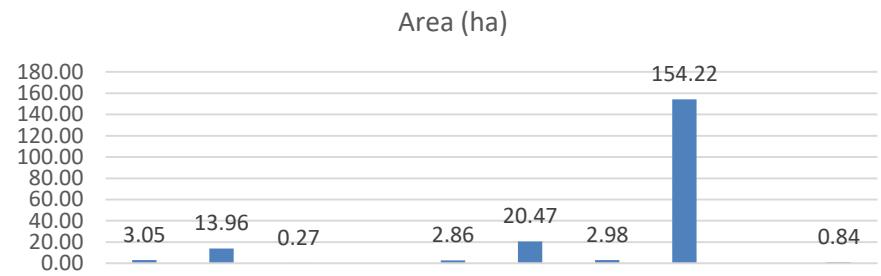

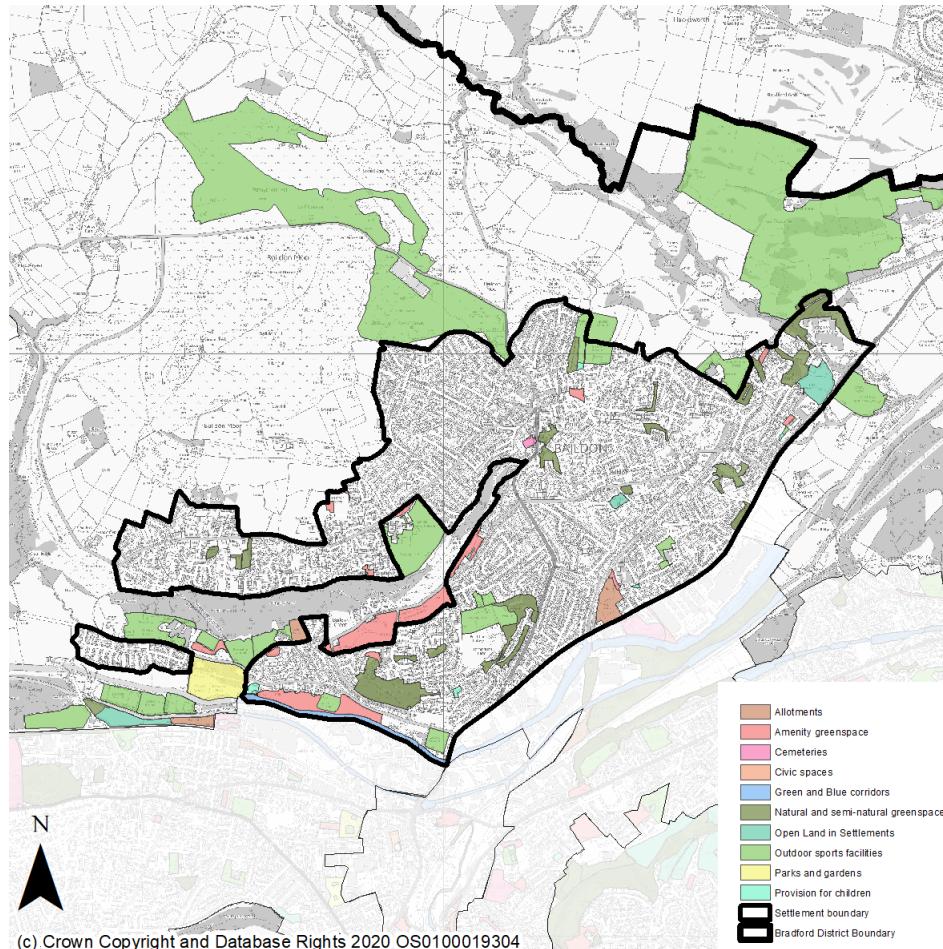

Table 5.29 Summary of provision priorities Baildon

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>LOW</b>	<b>HIGH</b>	<b>N/A</b>	<b>LOW</b>	<b>LOW</b>	<b>HIGH</b>	<b>LOW</b>	<b>HIGH</b>	<b>LOW</b>
<b>-0.21</b>	<b>5.82</b>	<b>-3.80</b>	<b>-0.16</b>	<b>-0.39</b>	<b>4.18</b>	<b>-4.35</b>	<b>124.89</b>	<b>-14.66</b>	<b>4 (sites)</b>

5.243 The settlement area of Baildon has **74 sites** identified as open space covering a total area of **198.67ha**.

5.244 With a population of 16,292, Baildon requires 88.14ha of open space to meet the local standards. The figures show that the actual amount of open space serving Baildon is significantly greater than this, although this is largely due to the two golf courses associated with Baildon. Although there is a positive deviation from the overall requirement figure, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.245 There is a significantly large amount of outdoor sports open space in this settlement area, however, this is due to the presence of two large golf courses (Baildon Golf Course and Hollins Hall Golf Course) that adjoin the settlement area, but located primarily in the Green Belt. Baildon also benefits from a number of Natural and Semi-natural Greenspace sites and Amenity Greenspace sites which helps to bring nature into the urban environment. Provision for children and young people is also well catered for with a total of 11 sites available across Baildon.

5.246 In terms of the distribution of spaces across the settlement there is a concentration of sites in the south west of the settlement in the Coach Road and Green Lane area. There is also a reasonable amount of provision on the north east side around the cricket and rugby clubs and out towards the golf courses. There is a notable lack of provision in the central and northern part of the settlement, particularly in the area to the north of West Lane. However, many of the properties in this part of Baildon benefit from private gardens and so have some level of access to outdoor space.

5.247 There are a number of **key sites** within Baildon including:

- Baildon Cricket Ground
- Hollins Hall Golf Course
- The Dell Recreation Ground and Playing Fields
- Baildon Rugby Club
- Fairbank Wood
- Baildon Golf Course

5.248 Table 5.29 provides a summary of the provision priorities for the Baildon settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that there are three typologies (Cemeteries, Open Land in Settlements, and Parks and Gardens) in Baildon which have notable deficits when assessed against the relevant local provision standards and consequentially are identified as being of a high priority for additional provision.

However, in terms of cemetery provision, as previously advised, this type of space is often provided at a sub-area level and therefore provision of this type of space is not a mandatory requirement in every settlement. Any additional provision of such space may help to provide a more sustainable option for the residents of Baildon. The provision of the Open Land in Settlements typology is also not compulsory and Baildon benefits from positive levels of Amenity Green space and a ‘wedge’ of Green Belt land which penetrates the settlement to some extent, helping to break-up the urban environment. The deficit of Parks and Gardens space is partly compensated for by the provision of Roberts Park in neighbouring Shipley which is also a key resource for Baildon residents. However, further provision of this type of space would be welcomed especially if an opportunity became available in the northern or eastern part of the settlement, giving access to residents in those areas.

- 5.249 The data also indicates that there is a slight deficiency of allotment space and that additional provision is of a moderate priority. Consideration should also be given to the findings of the needs and demands assessment to further understand the requirement for more allotment space.
- 5.250 Except for civic space, all the other typologies show a good level of provision and in most cases well-exceed the amount expected in terms of the standards. Additional provision of these open space typologies is a lower priority in Baildon.

## Bingley

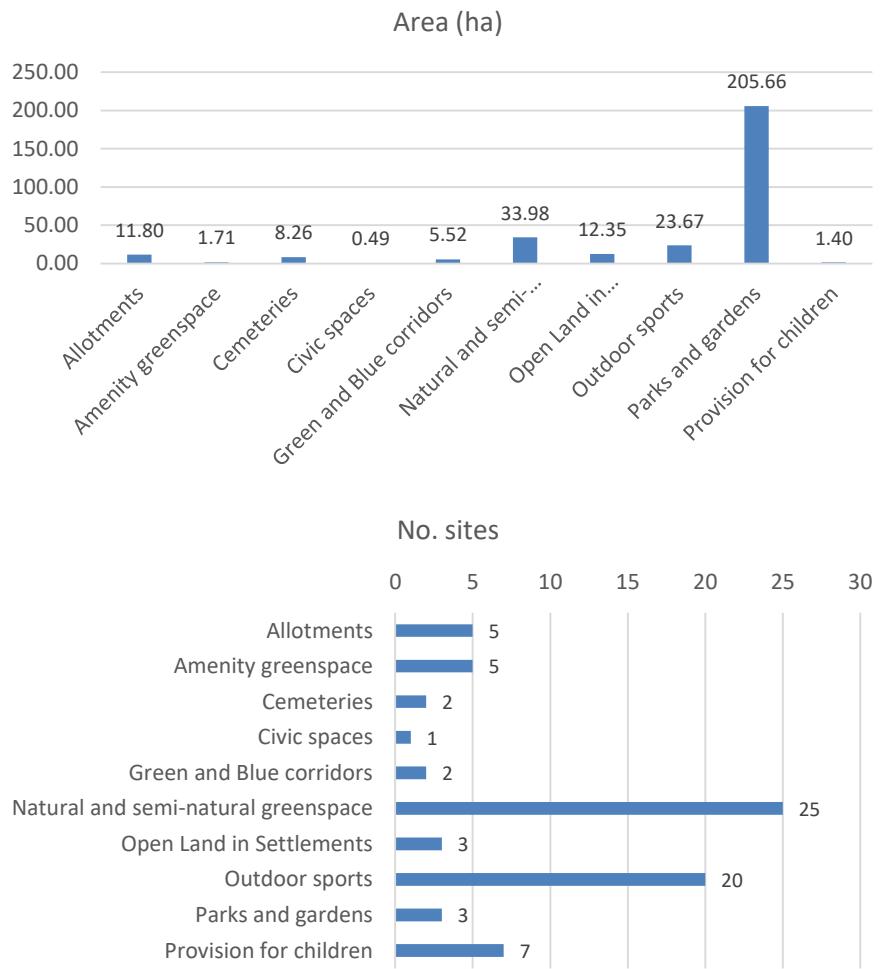

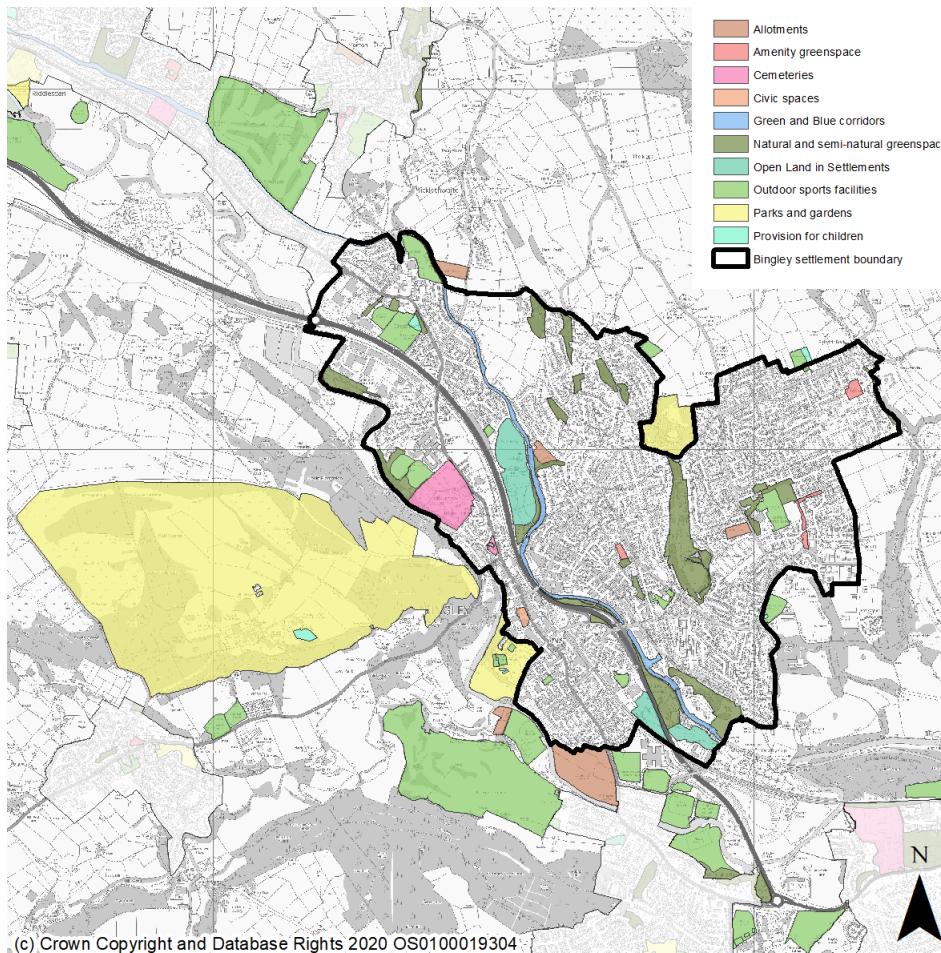

Table 5.30 Summary of provision priorities Bingley

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	HIGH	LOW	N/A	LOW	LOW	LOW	HIGH	LOW	LOW
8.25	-7.15	3.83	0.31	1.97	16.25	4.37	-8.24	189.70	0 (sites)

5.251 The settlement area of Bingley has **73 sites** identified as open space covering an area of **304.84ha**.

5.252 With a population of 17,726 Bingley requires 95.90ha of open space to meet the local standards. The figures show that the actual amount of open space serving Bingley is significantly greater than the requirement. Apart from Amenity Greenspace and Outdoor Sports, there is also a reasonable balance between the typologies.

5.253 A significant amount of the open space provision can be attributed to the large country park estate at St Ives on the edge of Bingley which accounts for 189.67ha. This site is of strategic importance as it provides for the wider population of Bradford as well as the settlements immediately adjacent to it, such as Bingley. The overall provision figure for Bingley and for the parks and gardens typology must therefore be treated with a level of caution.

5.254 Bingley also has a notable amount of natural and semi-natural green space sites which are well dispersed throughout the settlement area which allow for a natural break in the urban environment.

5.255 In terms of the distribution of spaces, the map shows that there is a reasonable spread of open space sites of different types throughout the settlement. However, it can be seen that there is more limited provision in the central (Priestthorpe area) and north eastern (Eldwick area) parts of settlement, although there is still reasonable access from these areas.

5.256 There are a number of key sites within the Bingley settlement area, including:

- St Ives Estate (Country Park)
- Myrtle Park
- Prince of Wales Park
- Gilstead Cragg
- Bingley Cemetery
- Leeds and Liverpool Canal

5.257 Table 5.30 provides a summary of the provision priorities for the Bingley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that for all typologies except Amenity Greenspace and Outdoor Sports, Bingley sees good levels of open space provision and performs well against the standards with notable positive deviations in most typologies.

5.258 In terms of Outdoor sports provision, there are a number of sites located within the Green Belt between Bingley and Cottingley that fall in the Cottingley settlement area but are used by the residents of Bingley. Indeed, when looking at the performance against the standards in Cottingley for the outdoor sports typology, there is a notable positive deviation, showing excess provision for the population. Therefore, although the data indicates a deficit in Bingley and a high priority for increased provision, the reality is that there is sufficient provision in a neighbouring area which is accessible for the residents of Bingley. In terms of Amenity Greenspace provision, consideration should be given to introducing new sites where opportunities arise. New developments should ensure adequate provision of open space and in Bingley the provision of Amenity Greenspace is a high priority.

## Cottingley

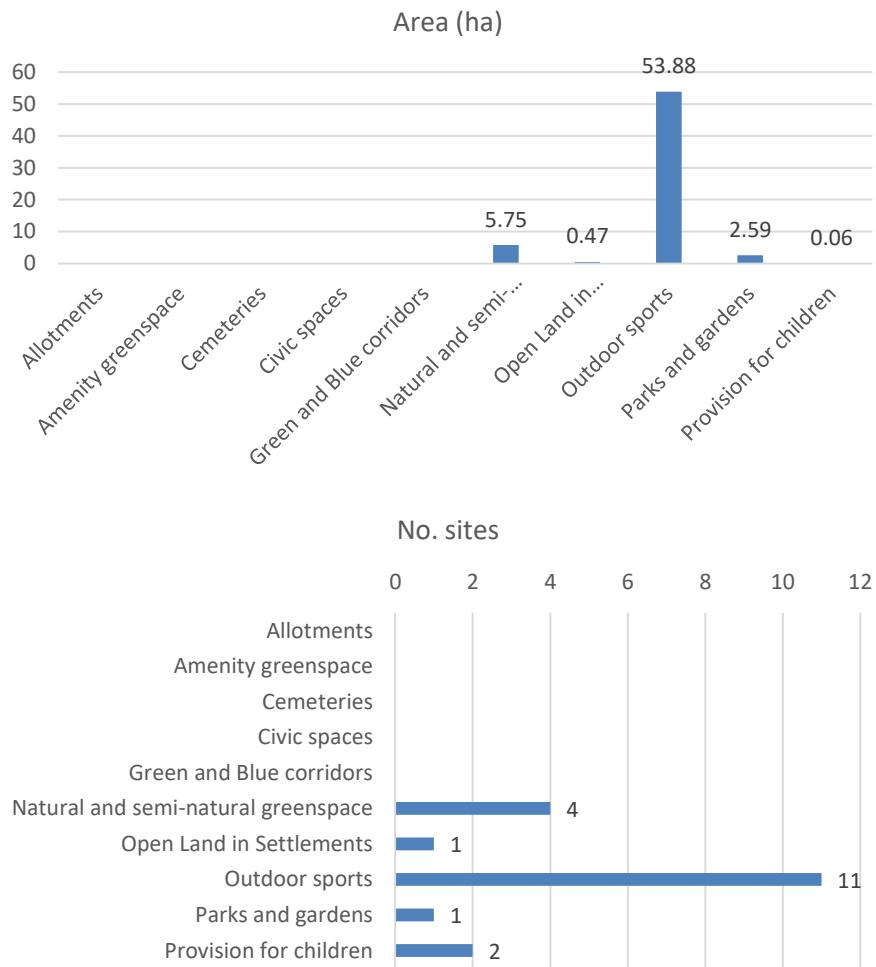

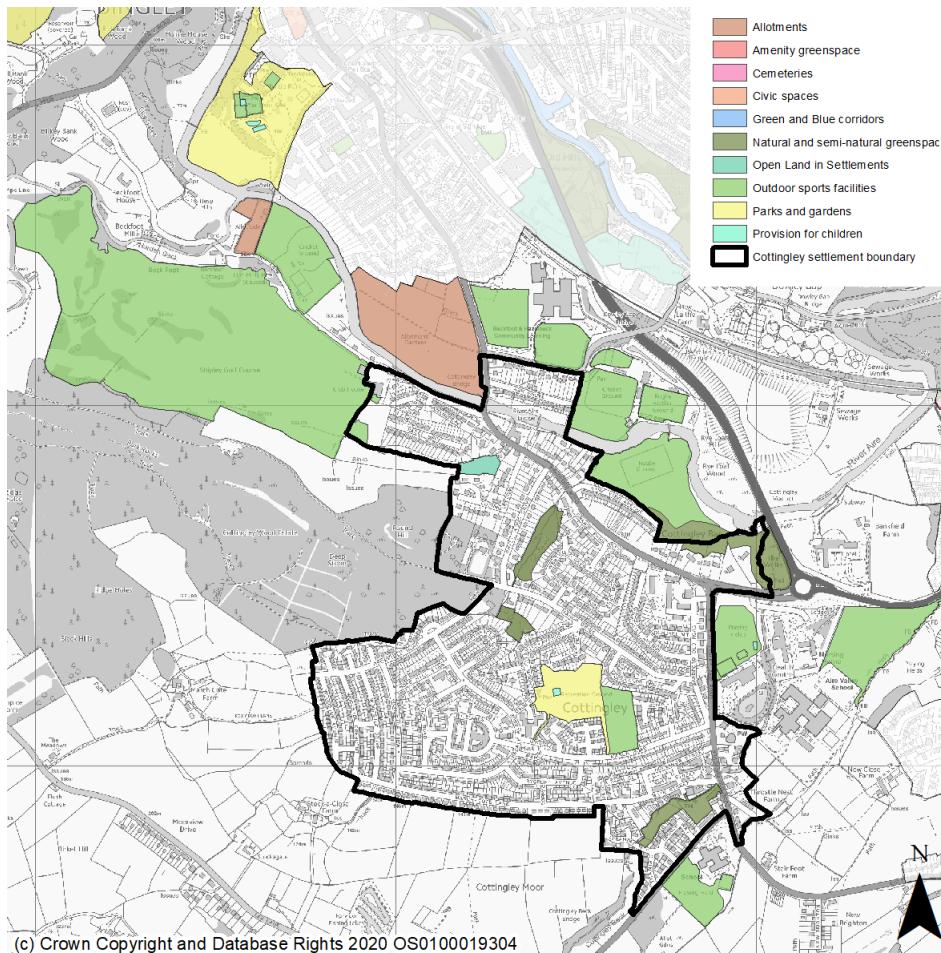

Table 5.31 Summary of provision priorities Cottingley

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	HIGH	HIGH	N/A	HIGH	LOW	HIGH	LOW	MODERATE	LOW
-0.95	-2.38	-1.19	-0.05	-0.95	0.98	-1.67	45.30	-1.70	2 (sites)

5.259 The settlement area of Cottingley has **19 sites** identified as open space covering a total area of **62.75ha**.

5.260 With a population of 4,767, Cottingley requires 25.79ha of open space to meet the local standards. The figures show that the actual amount of open space serving Cottingley is greater than the requirement. As explained below this is due to a large amount of Outdoor Sports open space which falls within the Cottingley settlement area in the Green Belt, but which also serves Bingley. Although there is a greater amount of open space than the requirement, the figures also show that there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.261 Cottingley has a good level of provision of outdoor sports sites with the recreation ground at the centre of the settlement and a number of other sites on the edge of the settlement which are shared with neighbouring Bingley. Shipley Golf course is also located to the west of Cottingley which provides for a significant proportion of this typology. There is also a good level of provision of natural and semi-natural greenspace and also play area sites for children and young people. However, there is no provision of the following five typologies: Allotments, Amenity Greenspace, Cemeteries, Civic Space, and Green and Blue Corridors.

5.262 In terms of the distribution of spaces across the settlement the map shows that there is a good dissemination of sites with most residents being within reasonable access of some form of open space. Cottingley Recreation Ground is located in the centre of the settlement and includes park, playing field and play area space – offering residents a range and central hub of open space with relatively easy access.

5.263 There are a number of key sites within the Cottingley settlement area including:

- Cottingley Recreation Ground
- Shipley Golf Course

5.264 Table 5.31 provides a summary of the provision priorities for the Cottingley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that seven out of the ten typologies see a deficit of provision when compared against the recommended provision set by the local standards.

5.265 In terms of Allotment open space, there is currently no provision within the settlement limits of Cottingley, however, there is large site in neighbouring Bingley which residents of Cottingley can access and Bingley has a notable positive deviation of allotment provision and this site may therefore compensate for the lack of provision in Cottingley.

5.266 The lack of Amenity Greenspace and low provision of Open Land in Settlements is perhaps more concerning as the provision of this type of incidental space can help to green the urban environment. However, Cottingley is a small-scale settlement surrounded on the whole by open countryside which compensates for the lack of provision of these typologies.

5.267 The lack of cemetery space is also partly compensated for in neighbouring Shipley (Nab Wood Cemetery) and Bingley both of which have adequate provision. Furthermore, cemetery provision is usually provided on a wider sub-area basis rather than at a settlement level.

5.268 The data also shows a deficit of Park space, even though there is provision at the recreation ground in the centre of the village. The priority for increased provision of this typology is moderate.

5.269 Natural and Semi-natural Greenspace, Outdoor Sports space and Provision for Children sites are all low priorities for increased provision as these typologies already meet the standards.

## East Morton

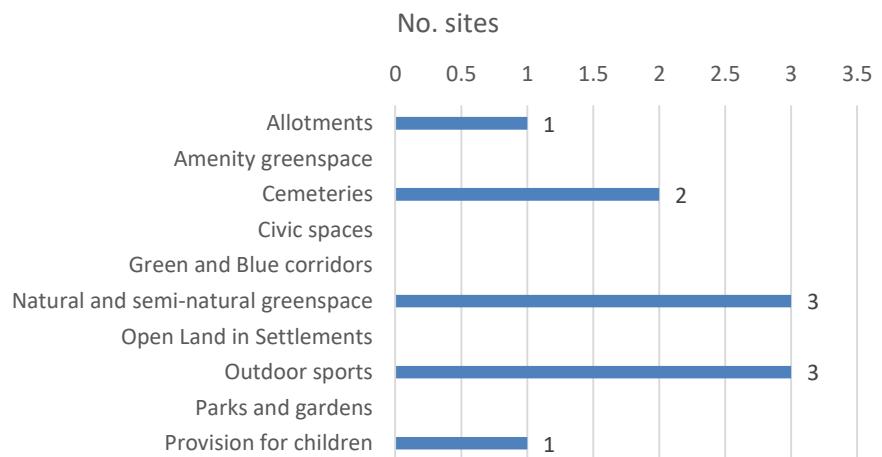

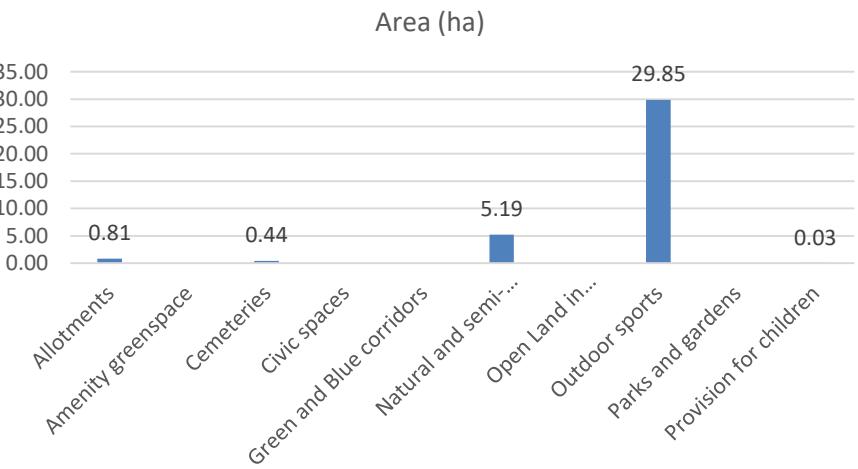

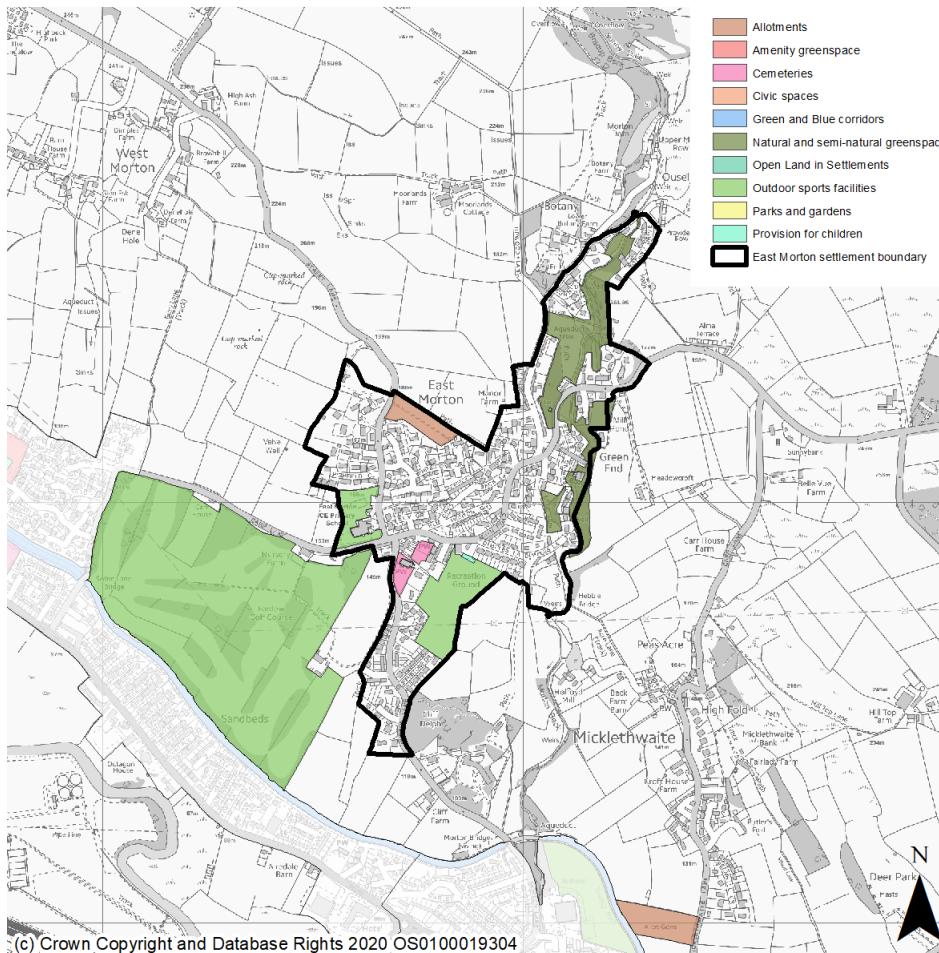

Table 5.32 Summary of provision priorities East Morton

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	HIGH	LOW	N/A	HIGH	LOW	HIGH	LOW	HIGH	LOW
0.55	-0.65	0.11	-0.01	-0.26	3.88	-0.59	27.49	-1.18	1 (sites)

5.270 The settlement area of East Morton has **10 sites** identified as open space covering a total area of **36.32ha**.

5.271 With a population of 1,309, East Morton requires 7.08ha of open space to meet the local standards. The figures show that the actual amount of open space serving East Morton is significantly greater than the requirement. This is largely due to the golf course which accounts for 26.46ha (72%) of the total area. Although there is still a positive deviation from the overall requirement figure if the golf course was removed, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.272 There is a notable amount of outdoor sports open space in this settlement area, most of which is accounted for by the golf course that adjoins the settlement area to the south west. The data also indicates that there is a relatively high amount of natural and semi-natural greenspace within the village which is mainly made up of the woodland located to the east of Green End Road. East Morton also benefits from an allotment site, a children's play area and the churchyard/cemetery at St Luke's church.

5.273 In terms of the distribution of spaces across the settlement, the map shows that there is a reasonable spread of different types of open space across the village with the key spaces of the recreation ground and play area being located reasonably centrally allowing good access for most residents.

5.274 There are a number of key sites within the East Morton settlement area including:

- East Morton Recreation Ground
- East Morton Golf Course

5.275 Table 5.32 provides a summary of the provision priorities for the East Morton settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that there are five typologies which demonstrate a deficit of provision when compared against the recommended provision set by the local standards. The deficit in provision is caused through the absence of provision of these typologies. Although for four of the typologies (Amenity Greenspace, Civic Spaces, Green & Blue Corridors and Open Land in Settlements), the deficits are relatively small and therefore a modest increase in spaces of these typologies would easily overcome the deficit. The deficit of Park and Garden space is more substantial and consideration needs to be given to the options for providing park space. The priority for increased provision of open space in East Morton is therefore of the Parks and Gardens typology.

5.276 With regards to the other typologies of open space (Allotments, Cemeteries, Natural and Semi-natural Greenspace, Outdoor sports and Provision for Children), these all have positive deviations from the standard provision levels and are a low priority for an increase in sites.

## Keighley

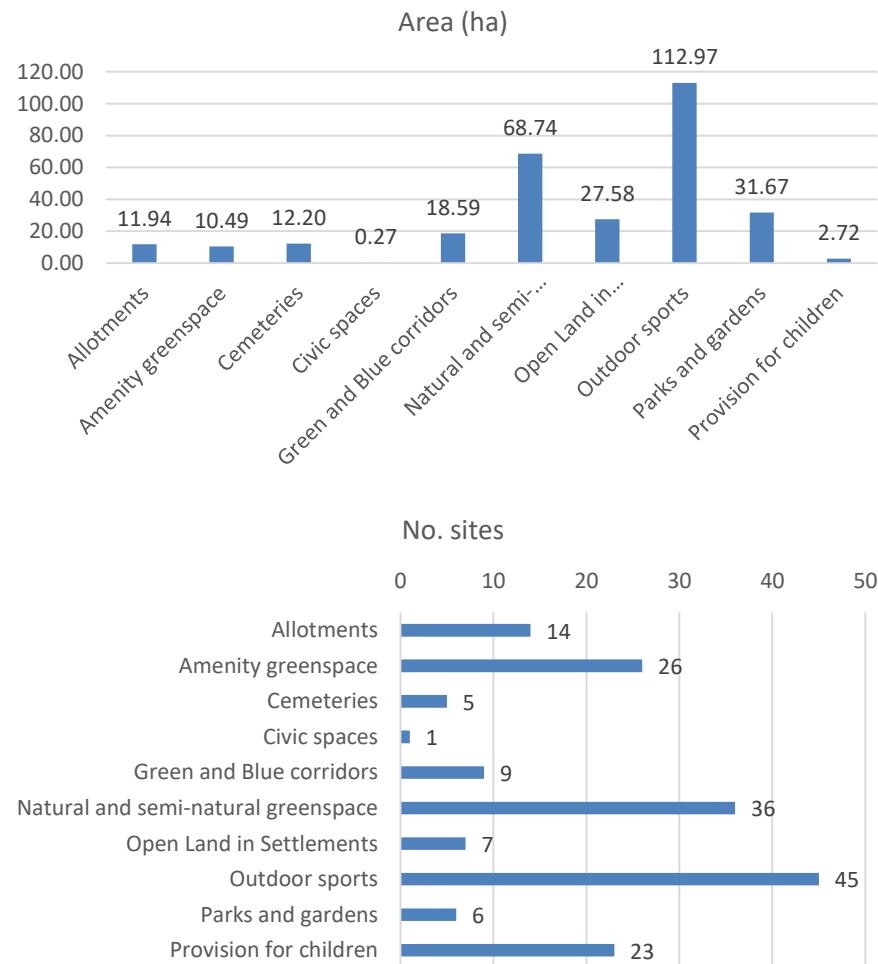

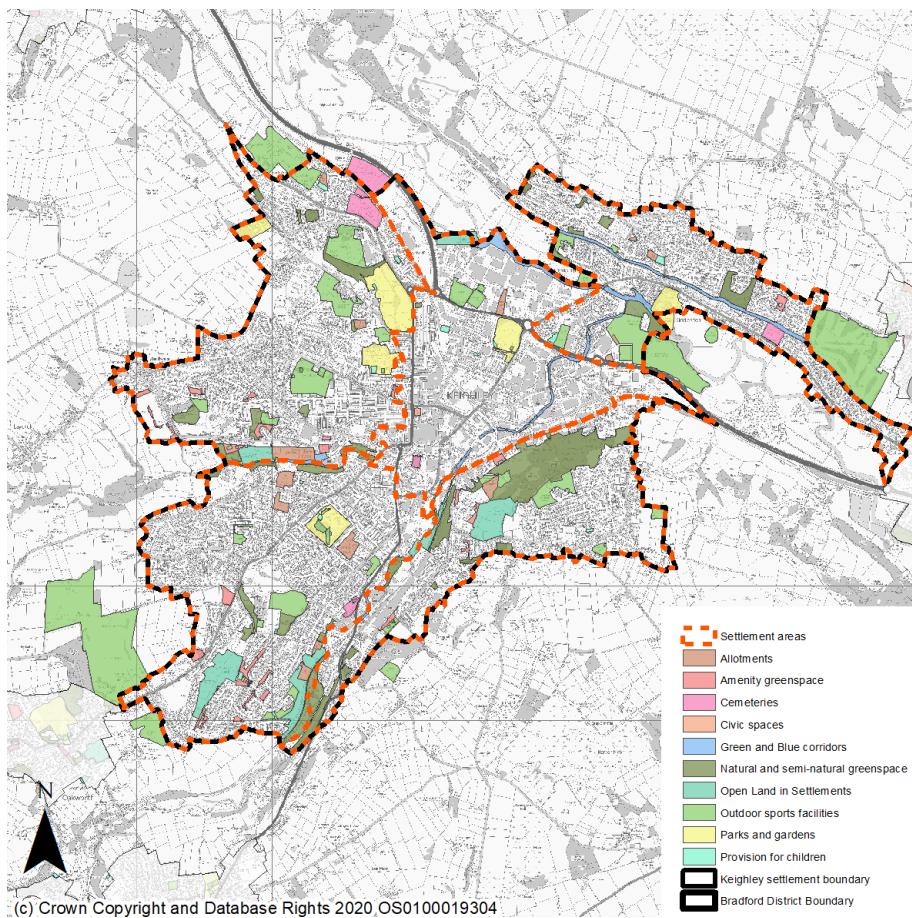

Table 5.33 Summary of provision priorities Keighley

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	HIGH	LOW	N/A	LOW	LOW	LOW	LOW	HIGH	LOW
2.14	-14.02	-0.06	-0.22	8.79	19.71	5.52	24.71	-12.45	3 (sites)

5.277 The settlement area of Keighley has **172 sites** identified as open space covering a total area of **297.18ha**.

5.278 With a population of 49,031, Keighley requires 265.26ha of open space to meet the local standards. The figures show that the actual amount of open space serving Keighley is greater than the standard provision level. However, the figures also show that there is slight imbalance between the different typologies of open space that currently exist in the settlement. Keighley has a significant amount of Outdoor Sports open space which is partly due to the two golf courses (Branshaw Golf Course and Fardew Golf Course) which are located on the south west and north east of the settlement, and account for 36.46ha. There is also a notable amount of Natural and Semi-natural Greenspace located at Parkwood Bottom, accounting for 25.55ha.

5.279 In terms of the distribution of spaces across the settlement the map shows that there is significant variation between the amount of provision of the different types of spaces within each of the smaller locality areas. The distribution of spaces in the Central Keighley area is mainly concentrated to the north. There is notably limited provision in the central area especially around some of the more industrial zones. Within the four other locality areas there is a reasonably good distribution of spaces and all areas have a reasonable amount of each type of space. Overall, Keighley has a good distribution of open space sites throughout the settlement which helps to provide natural breaks in the urban environment.

5.280 There are a number of **key sites** within the Keighley settlement area including:

- Cliffe Castle Park
- Devonshire Park
- Lund Park
- Victoria Park
- Utley Cemetery
- Branshaw Golf Club
- Marley Playing Fields

5.281 Table 5.33 provides a summary of the provision priorities for the Keighley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that for the majority of typologies there is a positive deviation when measured against the standard which indicates good levels of provision of these types of spaces in Keighley and a low priority for any additional provision. However, there are two types of space which have significant deficits in provision. These are Amenity Greenspace and Parks and Gardens.

5.282 The lack of Amenity Greenspace may in part be compensated for through the large amounts of Natural and Semi-natural Greenspace and Open Land in Settlements space which are present in Keighley, as these typologies fulfil similar functions to Amenity Greenspace. In addition, there are a number of small open space sites that fall below the site size threshold to be included in the audit but nevertheless provide an amenity function especially in some of the residential areas to the west. The provision of additional Amenity Greenspace in Keighley should be considered as a high priority to help ensure sufficient provision of this type of space and to reduce the imbalances between the different types of spaces.

5.283 Keighley already benefits from six parks including the Green Flag award winning Cliffe Castle Park, however, in terms of the amount of park space that needs to be provided to meet the standards, there is a notable shortfall in the town. There is currently no designated park space in the south west area of Keighley and the existing sites are concentrated fairly centrally. The provision of a new park space should be considered as a high priority in order to meet the needs of the population.

## Silsden

- Allotments
- Amenity greenspace
- Cemeteries
- Civic spaces
- Green and Blue corridors
- Natural and semi-natural greenspace
- Open Land in Settlements
- Outdoor sports facilities
- Parks and gardens
- Provision for children
- Silsden settlement boundary

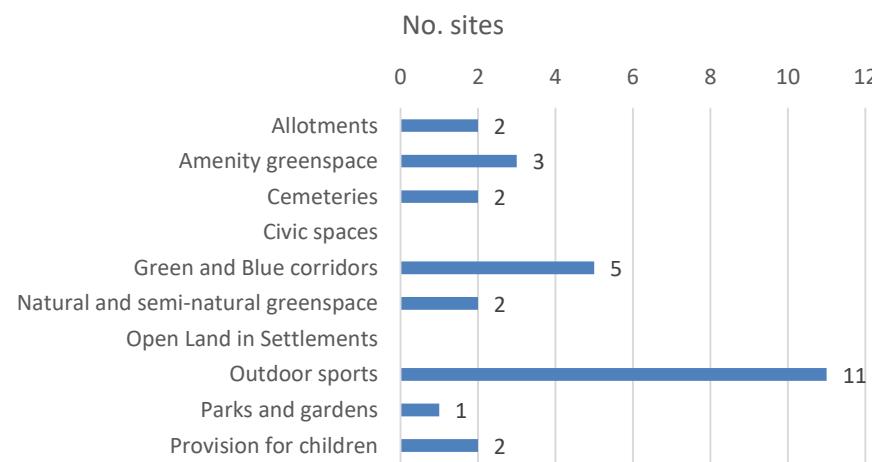

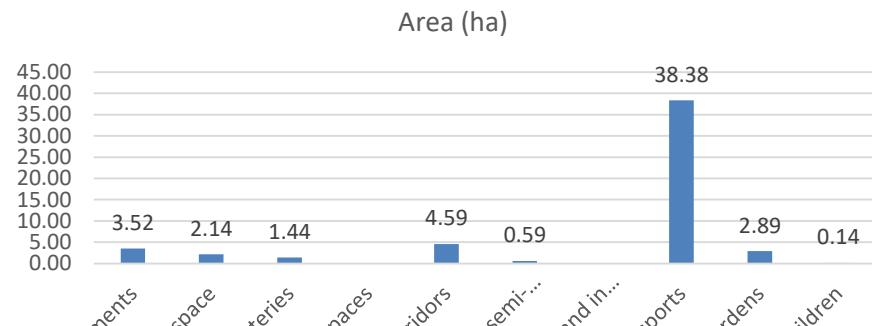

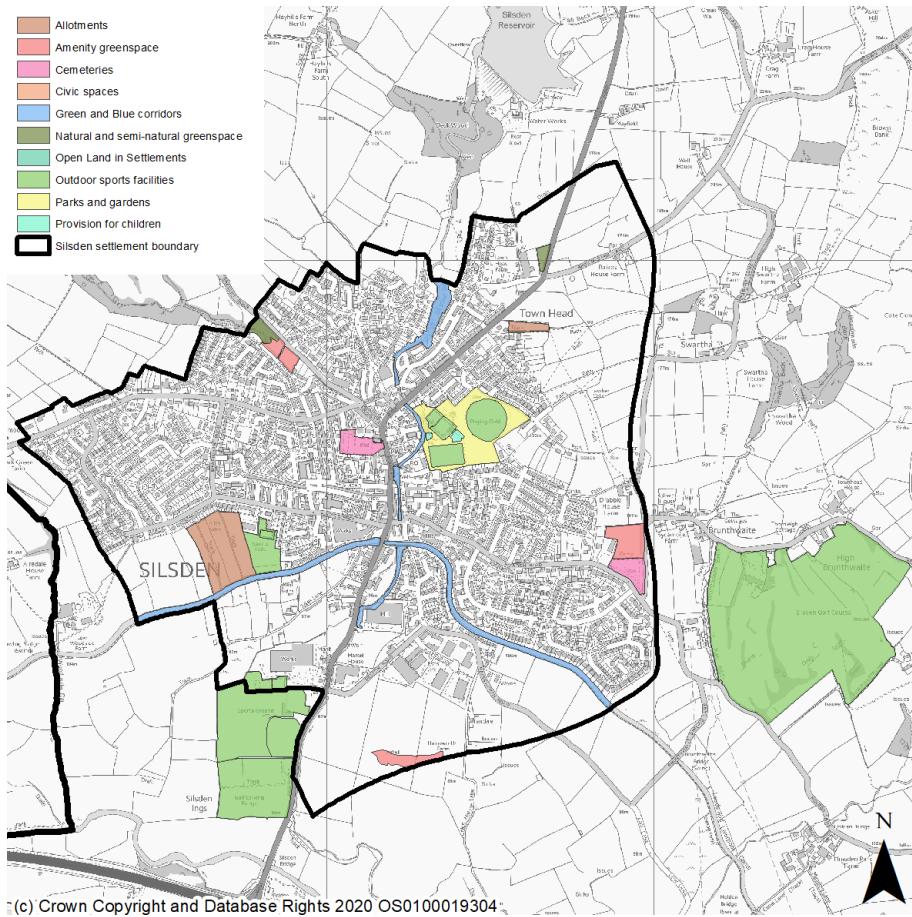

Table 5.34 Summary of provision priorities Silsden

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	MODERATE	MODERATE	N/A	LOW	HIGH	HIGH	LOW	HIGH	MODERATE
1.99	-1.68	-0.47	-0.08	3.06	-7.05	-3.44	24.63	-3.98	-1 (site)

5.284 The settlement area of Silsden has **28 sites** identified as open space covering a total area of **53.69ha**.

5.285 With a population of 7,638, Silsden requires 41.32ha of open space to meet the local standards. The figures show that the actual amount of open space serving Silsden is greater than the standard provision level. However, this is mainly because of the large amount of Outdoor Sports open space which includes a large parcel of land at Silsden Golf Course. Although there is a positive deviation from the overall requirement figure, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.286 There is a notable amount of outdoor sports open space in this settlement area (38.38ha), however, this is partly due to the presence of a number of sites that are located in the surrounding Green Belt but integral to settlement's provision. These include a large golf course to the east and a sports ground and golf driving range attached to the settlement on the south side.

5.287 In terms of the distribution of spaces across the settlement the map shows that there is a reasonable spread of sites ensuring good levels of access to provision for the majority of residents. Silsden park, which includes a play area and other sporting facilities is located in the centre of the settlement, with other sports sites located on the periphery of the settlement. There are some concentrations of residential properties to the east and west with limited immediate access to open space, however, most of these properties have private gardens which provide a level of outdoor space.

5.288 There are a number of key sites within the Silsden settlement area including:

- Silsden Park
- Silsden Sports Ground (Football and Cricket clubs)
- Silsden Allotments
- Leeds and Liverpool Canal
- Howden Cemetery
- St James' Churchyard

5.289 Table 5.34 provides a summary of the provision priorities for the Silsden settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that seven typologies have a deficit in provision when compared against the standards. Silsden has notable deficits in Natural and Semi-natural Greenspace, Parks and Gardens and Open Land in Settlements. Consideration should be given to the opportunities to increase levels of provision

of these typologies, particularly Parks and Gardens space. Although there is currently no provision of the Open Land in Settlements typology, this is a local typology which is not present in every settlement, and its provision is a consequence of the development of the settlement over time. So although there is currently no provision, it is not mandatory to provide this type of space. In terms of the provision of Natural and Semi-natural Greenspace, existing provision is limited to two sites in the northern part of the settlement.

Silsden would benefit from additional provision of this typology, however, the settlement is surrounded by open countryside and this supplements the lack of provision within the settlement itself.

- 5.290 There are also smaller deficits in Amenity Greenspace, Cemeteries, Civic Space and Provision for Children. These typologies are considered to be of a moderate priority for increased provision. Amenity Greenspace and Provision for Children being at the higher end of the scale.
- 5.291 In terms of Allotments, Green & Blue Corridors and Outdoor Sports sites, the data indicates good levels of provision against the standards and therefore the priority for increased amounts of these typologies is low.

## Steeton with Eastburn

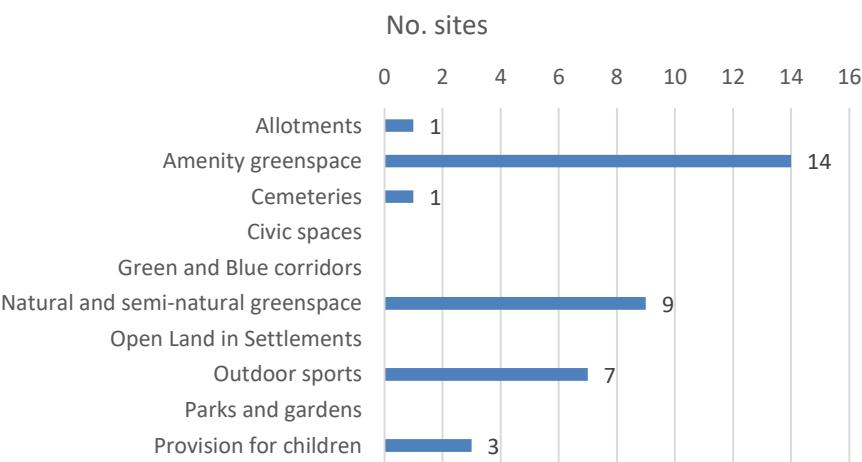

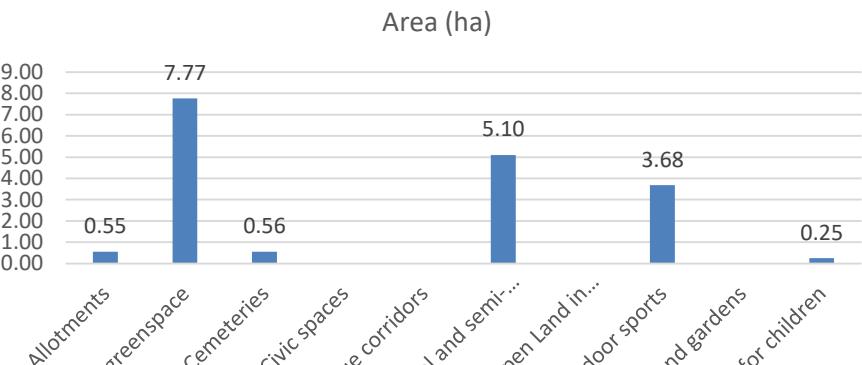

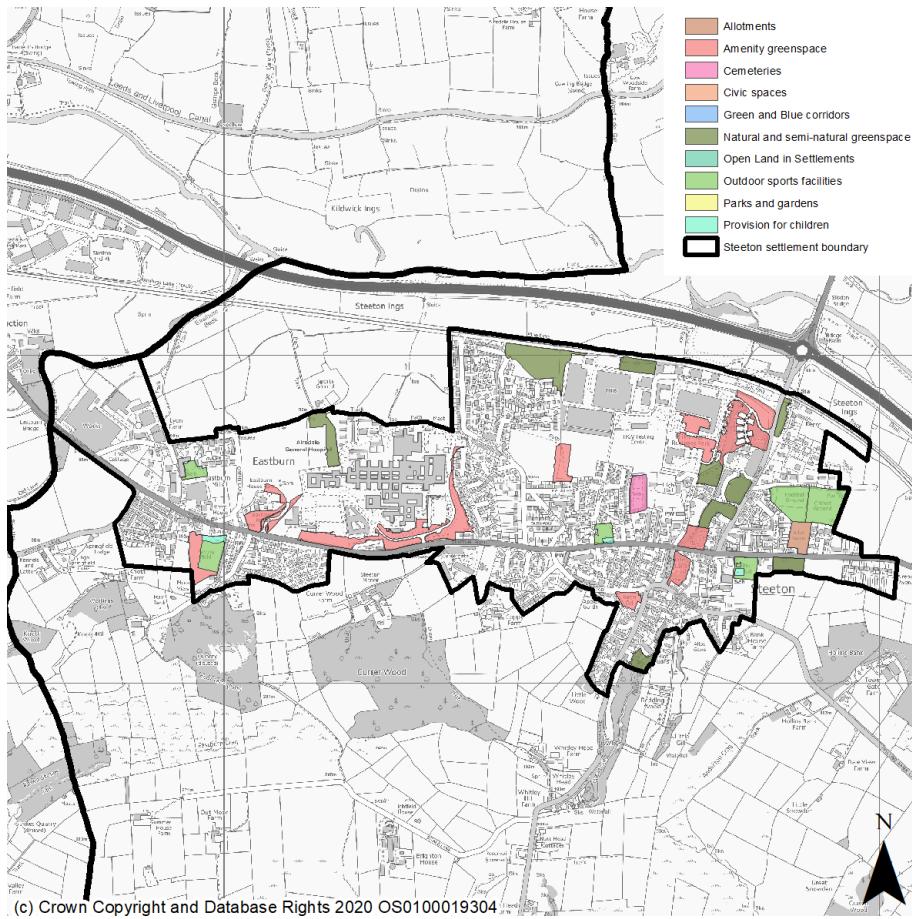

Table 5.35 Summary of provision priorities Steeton with Eastburn

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>LOW</b>	<b>MODERATE</b>	<b>N/A</b>	<b>HIGH</b>	<b>LOW</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>
<b>-0.28</b>	<b>5.69</b>	<b>-0.48</b>	<b>-0.04</b>	<b>-0.83</b>	<b>0.94</b>	<b>-1.88</b>	<b>-3.82</b>	<b>-3.75</b>	<b>1 (site)</b>

5.292 The settlement area of Steeton has **35 sites** identified as open space covering a total area of **17.91ha**.

5.293 With a population of 4,167, Steeton requires 22.54ha of open space to meet the local standards. The figures show that there is a slight deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement.

5.294 There is a notable amount of Amenity Greenspace in this settlement area, much of which is associated with the wider grounds of Airedale Hospital and also within more recent housing developments. There is also a good amount of natural and semi-natural greenspace and provision for children located within the settlement area.

5.295 In terms of the distribution of spaces across the settlement the map shows that there is a good dispersal of the different typologies of spaces with provision of outdoor sports, amenity greenspace and play areas being found in both the Steeton and Eastburn areas of the settlement, giving good access to the majority of residents.

5.296 There are a number of **key sites** within the Steeton settlement area including:

- Eastburn Recreation Ground
- Steeton Football and Cricket Clubs Grounds

5.297 Table 5.35 provides a summary of the provision priorities for the Steeton settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that there are three typologies (Amenity Greenspace, Natural and Semi-natural Greenspace, and Provision for Children) which have a positive deviation from the standard provision level and are therefore a low priority for increased provision.

5.298 However, there are seven typologies which do not meet the expected standards for the size of the population. The data indicates that there is a notable deficit in the amount of Park and Garden space and Outdoor Sports space in Steeton and these typologies are a high priority for increased provision.

5.299 There is also a deficit of the Open Land in Settlements typology. However, this is a local typology and provision of this type of space is not mandatory. Furthermore, the large amount of Amenity Greenspace present in the settlement can be seen to play a similar role to the open land in settlements typology and is a suitable substitute for the lack of this type of space.

5.300 There are smaller deficits of Allotment space, Cemeteries, Civic space and Green and Blue Corridor space and additional provision of these typologies is of a moderate priority and would help to redress the imbalances of provision.

## South Pennine Towns and Villages

### Cullingworth

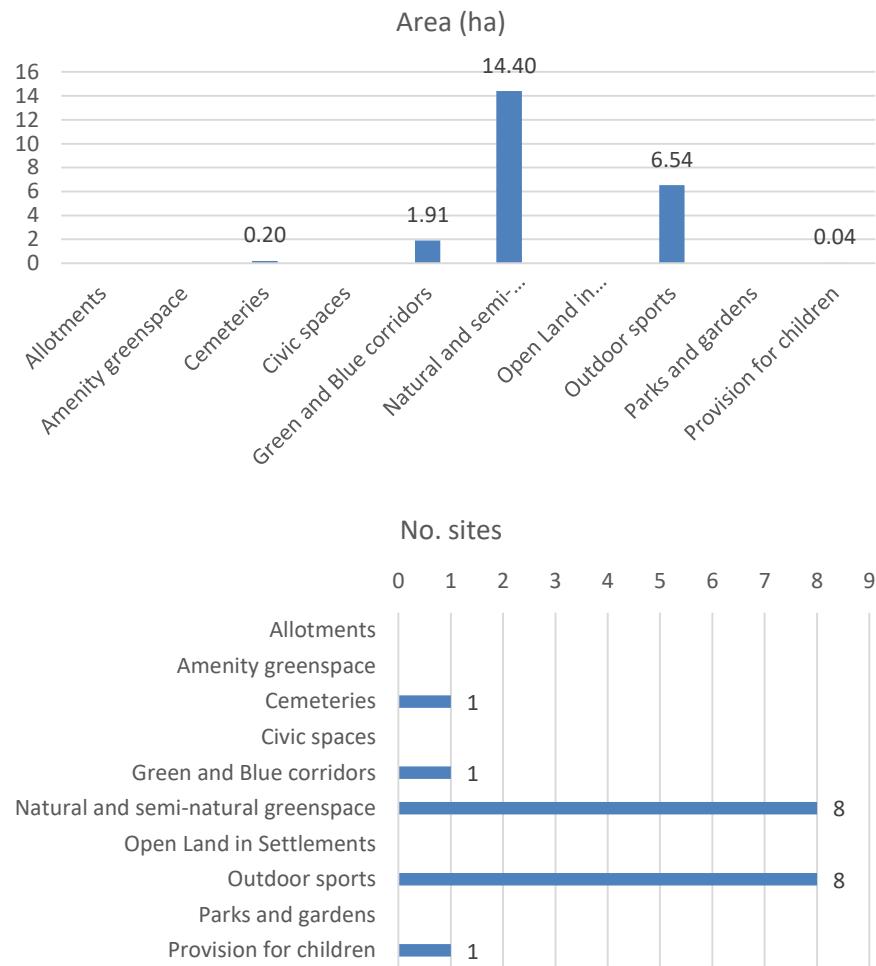

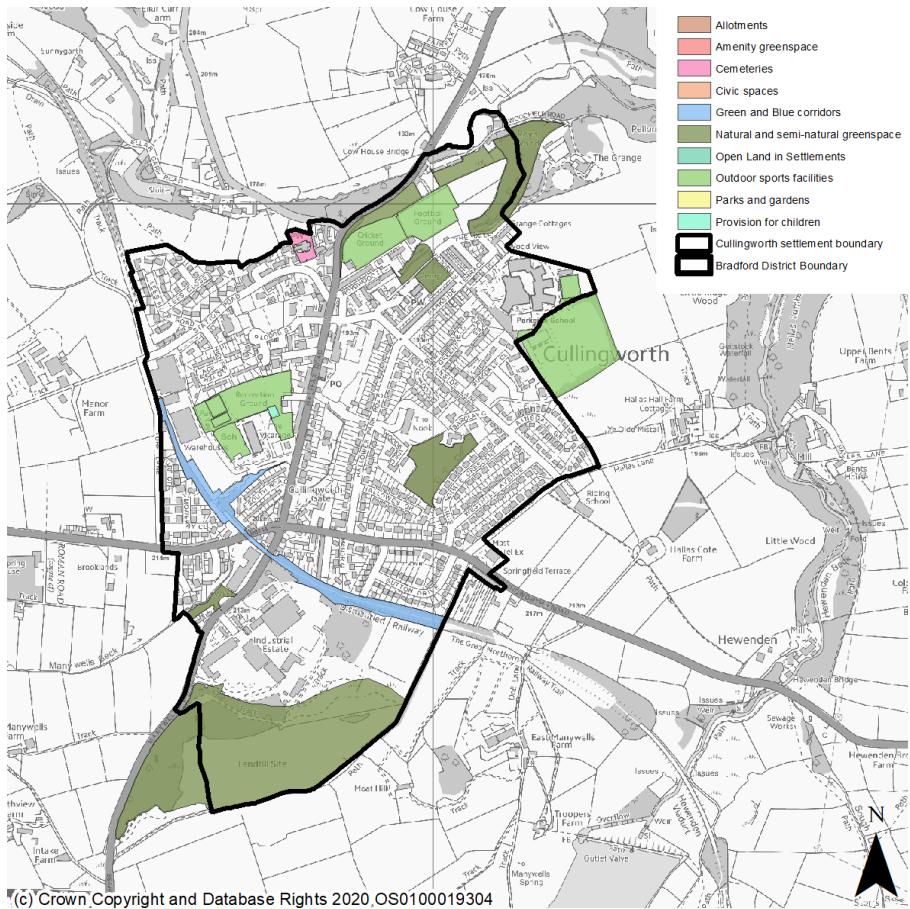

Table 5.36 Summary of provision priorities Cullingworth

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	HIGH	MODERATE	N/A	LOW	LOW	HIGH	LOW	HIGH	LOW
-0.52	-1.30	-0.45	-0.03	1.39	11.80	-1.17	1.86	-2.34	0 (sites)

5.301 The settlement area of Cullingworth has **19 sites** identified as open space covering a total area of **23.08ha**.

5.302 With a population of 2,596, Cullingworth requires 14.04ha of open space to meet the local standards. The figures show that the actual amount of open space serving Cullingworth is notably greater than the requirement. This is in part due to the large area of Natural and Semi-natural Greenspace, most of which is attributed to the former Manywells Quarry site, which has been returned to a natural state and provides a significant resource for residents occupying new homes on the recently developed adjacent site.

5.303 Cullingworth also sees a good amount of Outdoor Sports open space, although a notable proportion of this is made up of the school playing fields at Parkside School. There is also good provision of Green and Blue Corridor space with the presence of the Great Northern Railway Trail which runs along the former railway track bed through the centre of the village. Cullingworth has no provision of five of the ten open space typologies, including Parks and Gardens, Allotments and Amenity Greenspace.

5.304 In terms of the distribution of spaces across the settlement, the map shows that there is a reasonable spread of sites, with the recreation ground and play area being located fairly centrally, which gives the majority of residents good access to these key facilities. The small scale nature of the settlement means that access to the existing open space provision is relatively good. However, the lack of certain types of space means residents have to travel further afield to access alternative provision.

5.305 There are a number of **key sites** within the Cullingworth settlement area including:

- Cullingworth Recreation Ground
- Cullingworth Cricket Club Ground
- Manywells Quarry
- Great Northern Railway Trail

5.306 Table 5.36 provides a summary of the provision priorities for the Cullingworth settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that the typologies of Green and Blue Corridors, Natural and Semi-natural Greenspace, Outdoor Sports and Provision for Children all perform well against the standards, showing a positive deviation and meaning that there is sufficient provision to meet the needs of the population. In the case of Natural and Semi-natural Greenspace there is a significant amount of provision over and above the expected level for the size of the population.

5.307 Cullingworth as a whole has more than a sufficient amount of open space to meet the needs of its population but as noted above there are imbalances between the different typologies. The typologies with a deficit of provision include Allotments, Amenity Greenspace, Cemeteries, Civic Space, Open Land in Settlements and Parks and Gardens. These are noted as being of a higher priority for increased provision and consideration should be given to resolving the imbalances between typologies where the opportunities arise.

5.308 Some of the existing spaces of other typologies may offer similar functions and therefore provide a substitute for the lack of provision. For example, the recreation ground in the centre of the village could be seen to double-up as a Park space, and some of the Natural and Semi-natural Greenspaces may also function as Amenity Greenspace.

5.309 Cemeteries, Civic Space and Open Land in Settlements are all typologies which are not always provided for in the smaller settlements and provision of such spaces can be accessed elsewhere (e.g. in nearby Bingley or Keighley).

5.310 There is, however, currently no allotment provision within Cullingworth and opportunities to identify suitable sites should be pursued to ensure adequate and sustainable provision of allotment space for local residents.

## Denholme

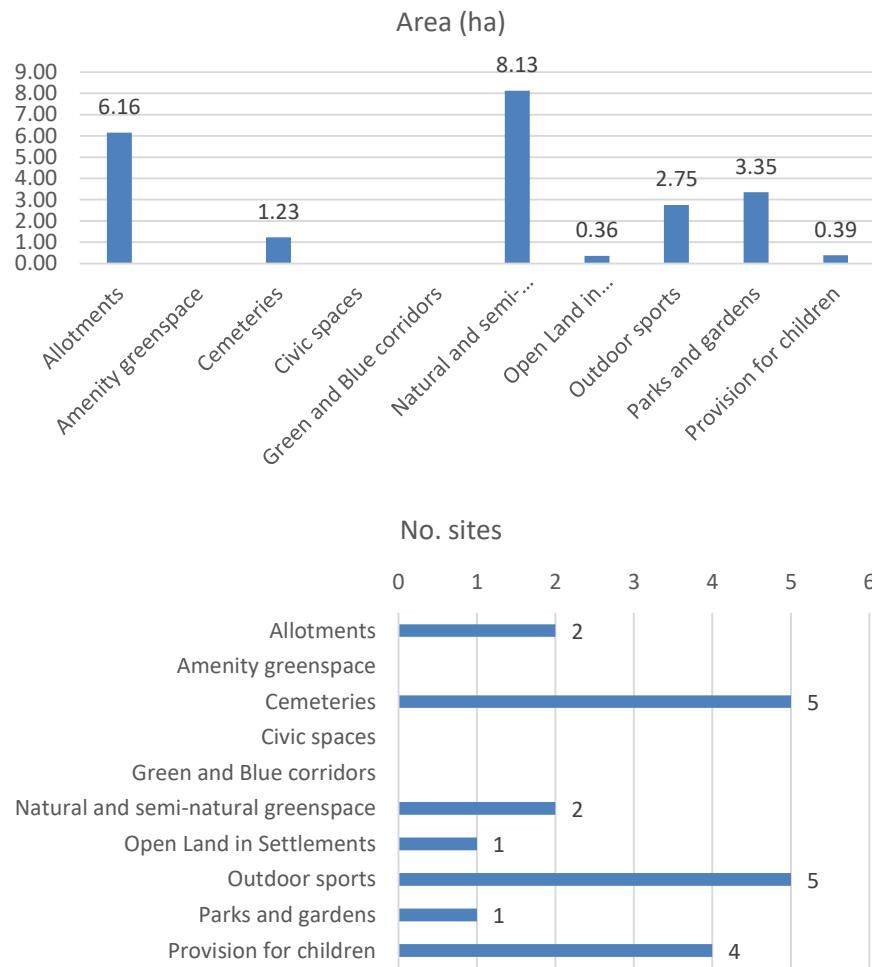

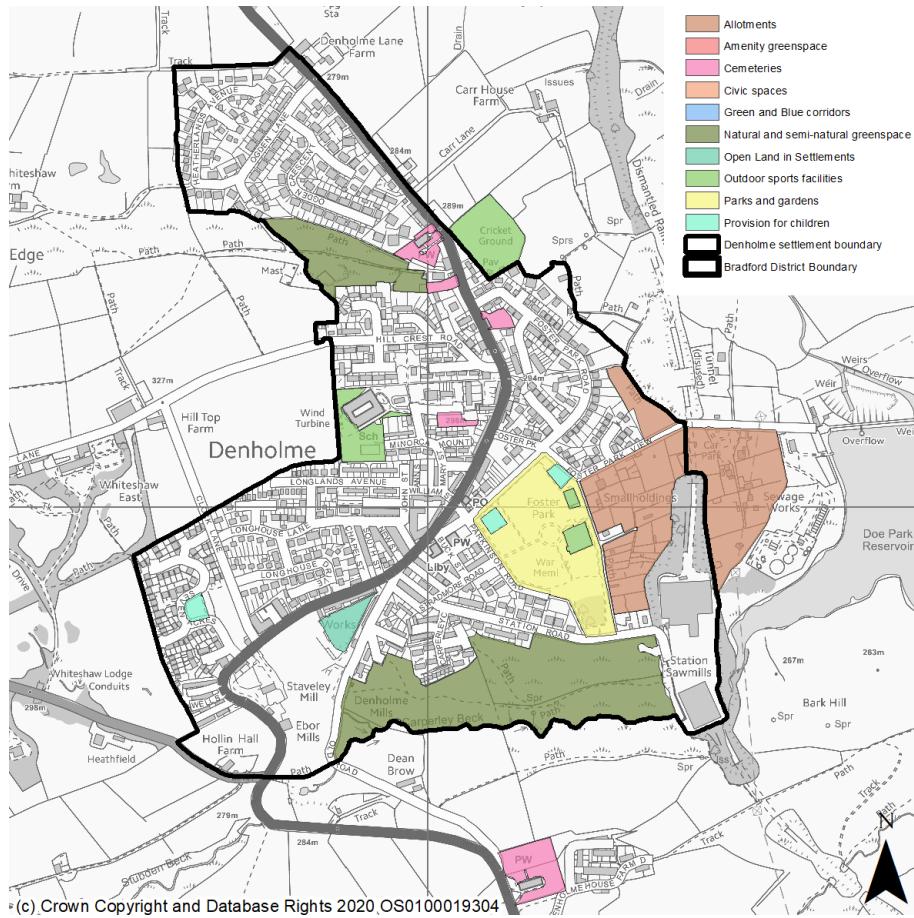

Table 5.37 Summary of provision priorities Denholme

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	HIGH	LOW	N/A	HIGH	LOW	HIGH	HIGH	LOW	LOW
5.61	-1.36	0.55	-0.03	-0.54	5.42	-0.86	-2.13	0.91	3 (sites)

5.311 The settlement area of Denholme has **20 sites** identified as open space covering an area of **22.38ha**.

5.312 With a population of 2,715, Denholme would require 14.69ha of open space to meet the local standards. The figures show that the actual amount of open space serving Denholme is notably greater than the requirement. This is in part due to the large amount of land classified as allotment space, which is made up of a number of small holdings on the eastern part of the settlement. There is also a notable amount of Natural and Semi-natural Greenspace towards the south of the settlement which follows the course of Carperley Beck.

5.313 The data shows that Denholme has a good range of open space provision, but that there are three typologies of open space which are not found within the settlement area, including Amenity Greenspace, Civic Space and Green and Blue Corridors. The figures also show that there is a slight imbalance between the provision of the different typologies of spaces.

5.314 In terms of the distribution of spaces across the settlement the map shows that there is a good spread of open space sites throughout Denholme and the centrally located Foster Park provides the majority of residents with good access to this key facility.

5.315 There are a number of **key sites** within the Denholme settlement area including:

- Foster Park
- Foster Park View Allotments
- Denholme Small Holdings
- Carperley Beck

5.316 Table 5.37 provides a summary of the provision priorities for the Denholme settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that for five of the typologies there is a positive deviation from the standard, indicating that residents are well-catered for in terms of the provision of these typologies.

5.317 For example, there is a good number of play areas within the settlement compared to the standard provision level. However, looking at the distribution of these spaces indicates that they are mainly concentrated in the south of the village and therefore residents in the north do not have as good access. So although the provision of play areas meets the standards the location of the sites means that the provision is not particularly equitable to all residents.

5.318 The provision of Civic Space and Open Land in Settlements is not always applicable to smaller settlements. Civic Space is mainly located the larger Principal Towns or the Regional City and so provision in Denholme is not a priority. There is an existing small amount of Open Land in Settlements space within the village and provision of this locally derived typology is not a mandatory requirement. The provision of other typologies, such as Natural and Semi-natural Greenspace, may compensate for the slightly deficit of the Open Land in Settlements space.

5.319 Of more concern is the deficit of Outdoor Sports space and Amenity Greenspace. Although Denholme has a cricket ground, and Foster Park in some respect provides a substitute for a recreation ground, the settlement may benefit from additional playing field space if an opportunity for such a site can be identified. In terms of Amenity Greenspace provision, some of the other typologies such as Natural and Semi-natural Greenspace may perform a similar function and the data shows that there is an abundance of this type of space in the village. The priority for provision of any new open space as part of new developments should be for Outdoor Sports and/or Amenity Greenspace.

## Harden

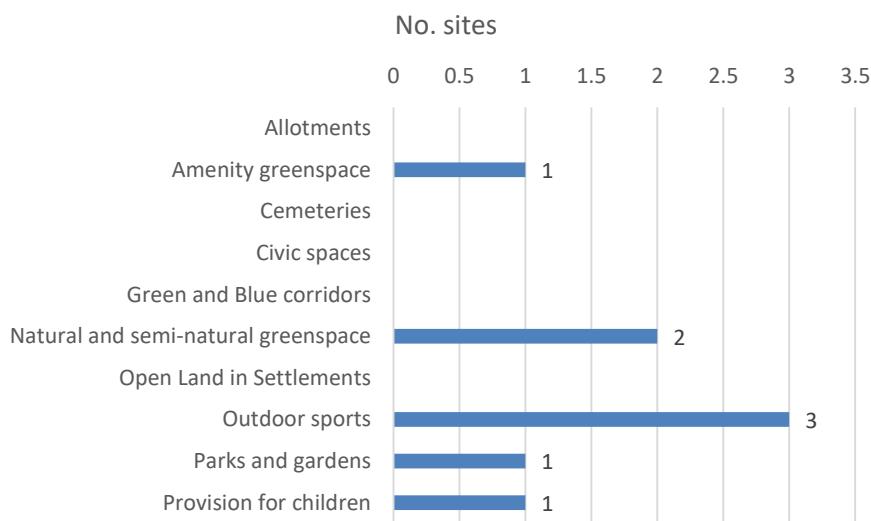

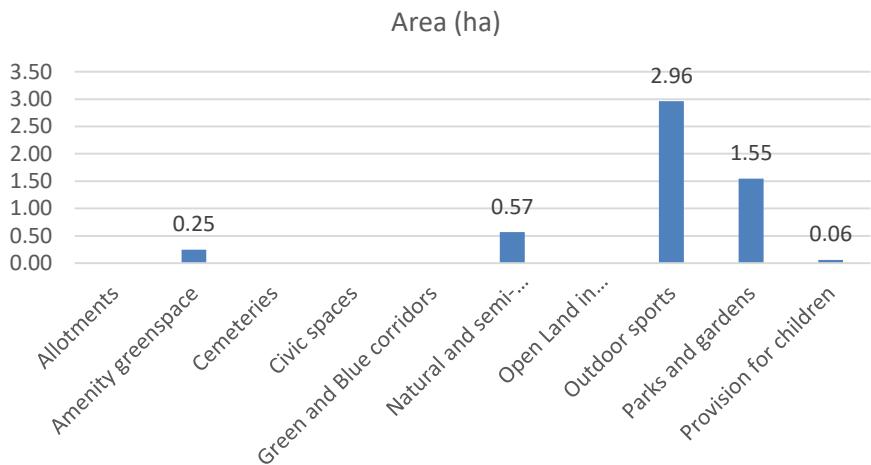

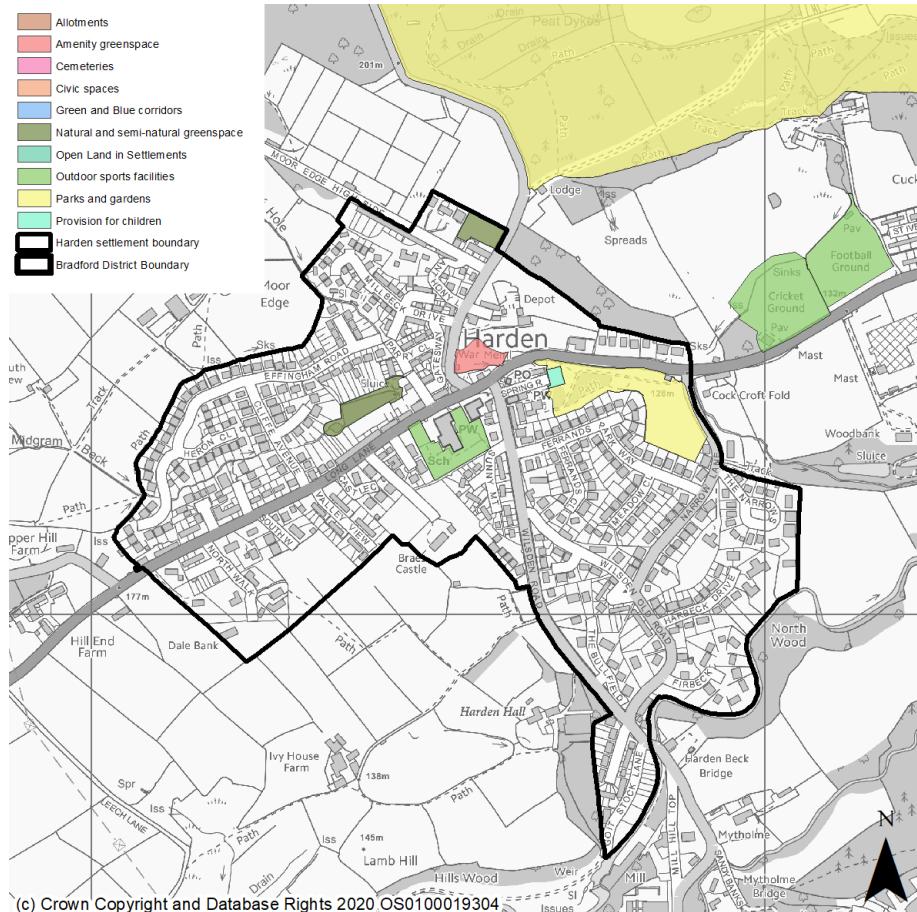

Table 5.38 Summary of provision priorities Harden

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>HIGH</b>	<b>MODERATE</b>	<b>HIGH</b>	<b>N/A</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>LOW</b>	<b>LOW</b>
<b>-0.32</b>	<b>-0.55</b>	<b>-0.40</b>	<b>-0.02</b>	<b>-0.36</b>	<b>-1.03</b>	<b>-0.72</b>	<b>0.08</b>	<b>0.11</b>	<b>0 (sites)</b>

5.320 The settlement area of Harden has **8 sites** identified as open space covering an area of **5.39ha**.

5.321 With a population of 1,600, Harden would require 8.66ha of open space to meet the local standards. The figures show that there is a deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement.

5.322 The data shows that Harden has good amounts of Outdoor Sports open space in the form of cricket and football pitches. It also benefits from a park which includes a play area. However, the findings of the audit also highlight that there is no Allotment, Cemetery, Civic, Green and Blue Corridor or Open Land in Settlements space within the village.

5.323 In terms of the distribution of spaces across the settlement the map shows that there is a concentration of sites around the centre of the village with Harden Memorial Hall Park providing a focal point for residents. This site is reasonably well accessed from most of the residential areas of Harden. The outdoor sports provision (cricket and football grounds) is located on the eastern side of the village in the Green Belt. Access to this provision is still relatively good being no more than 1,200m from the furthest extent of the village. It should also be noted that although St Ives Estate is classed and recorded under Bingley, a large part of the site falls within the wider Harden area and provides a key facility for the residents of Harden.

5.324 There are a number of **key sites** within Harden including:

- Harden Memorial Hall Park
- Harden Cricket and Football clubs grounds

5.325 Table 5.38 provides a summary of the provision priorities for the Harden settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that three out of the ten typologies (Outdoors Sports, Parks and Gardens, and Provision for Children) perform positively against the standards, but that there is only just a sufficient amount of these types of open space.

5.326 All the other typologies show slight deficits against the standards and in many cases there is no provision available in the village. With an overall deficit of open space in the village consideration should be given to the priorities for new provision.

5.327 In terms of cemetery, civic and open land in settlements space, such sites are not always provided in smaller settlements, with these types of open space often being seen as more strategic sites which are more usually located in the larger Principal Towns or within

the Regional City. Although there is a deficit in provision of these types of spaces, provision of more local types of open space are a higher priority.

- 5.328 In terms of providing allotment space, opportunities to identify a suitable site should be pursued as a high priority for helping to increase the amount and variety of open space in Harden. The findings of the open space Needs and Demands assessment should also be taken into account when considering the priority level for providing new allotment space.
- 5.329 Harden is surrounded by open countryside and there are some notable areas of natural and semi-natural greenspace directly adjacent to the settlement which incorporate public rights of way, such as the woodland along Harden Beck. These spaces have not been recorded in the audit, but they do offer a level of provision to local residents and may compensate for the lower levels of Natural and Semi-natural Greenspace and Green and Blue Corridor space within the settlement. Where opportunities arise for the provision of new open space, natural spaces which help to connect spaces together should be provided.
- 5.330 There is also a slight deficit of Amenity Greenspace within the settlement, new development should consider including such space to help increase levels of open space within the settlement.

## Haworth

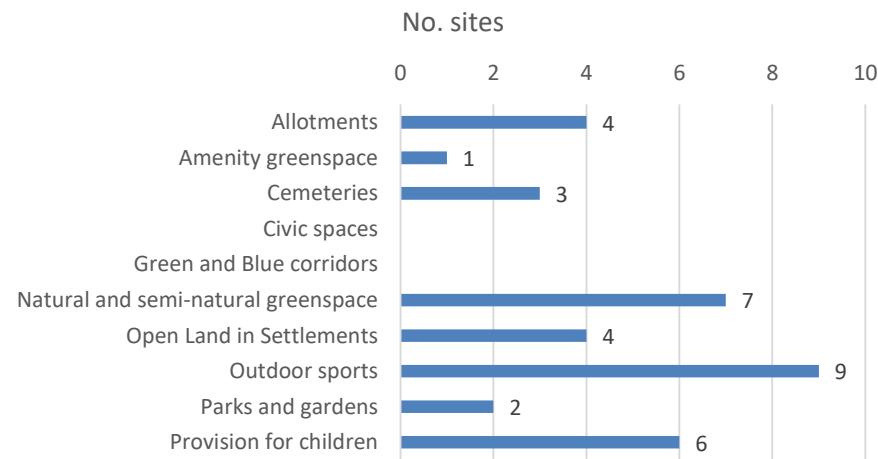

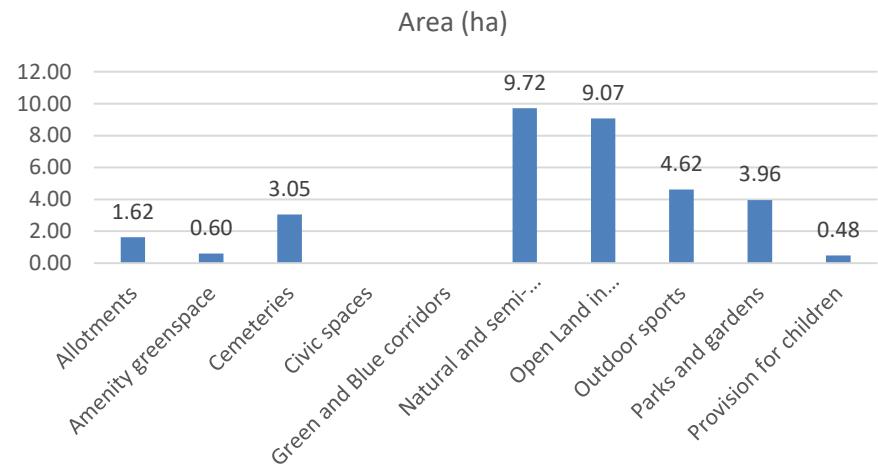

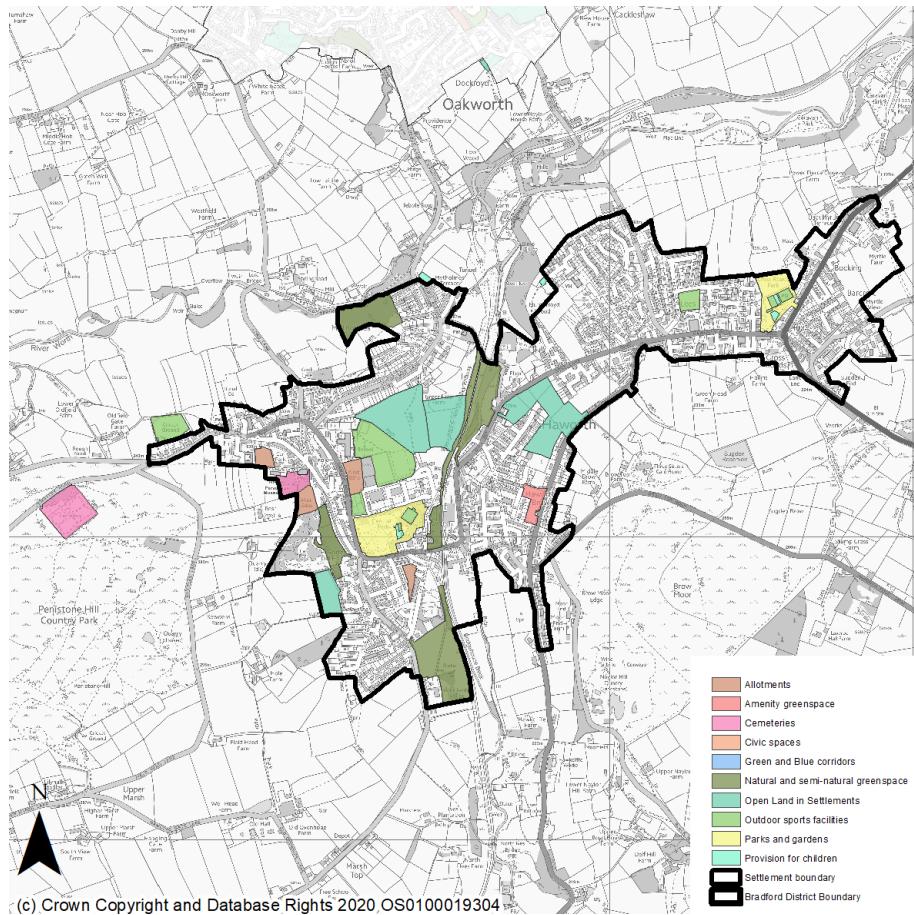

Table 5.39 Summary of provision priorities Haworth

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	HIGH	LOW	N/A	HIGH	LOW	LOW	HIGH	MODERATE	LOW
0.46	-2.32	1.60	-0.06	-1.17	3.89	6.44	-5.86	-1.28	4 (sites)

5.331 The settlement area of Haworth has **36 sites** identified as open space covering an area of **33.13ha**.

5.332 With a population of 5,826, Haworth would require 31.52ha of open space to meet the local standards. The figures show that there is a very slight deficit in the provision of open space compared to the standards and also some imbalances between the different typologies of open space, with some typologies demonstrating significantly larger amounts compared to the standard expected provision requirements.

5.333 With the exception of Civic spaces and Green and Blue Corridor spaces, Haworth has at least one site of each typology of open space. It has notable amounts of Open Land in Settlements space and Natural and Semi-natural Greenspace as well as a good number of provision for children sites (6 in total).

5.334 In terms of the distribution of spaces across the settlement the map shows that there is a good spread of provision throughout the settlement area with concentrations of key sites within the central part of Haworth village and a lesser number of sites within the Cross Roads community. There is a reasonable distribution of Provision for Children sites with facilities located in Central Park and Cross Road Park serving the residential areas in the village centres, but also provision for the community around Victoria Avenue and Massey Fields to the north.

5.335 There are a number of **key sites** within the Haworth settlement area including:

- Central Park
- Cross Roads Park
- Rawdon Road Allotments
- Mytholmes Lane Fields

5.336 Table 5.39 provides a summary of the provision priorities for the Haworth settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that there are five typologies (Allotments, Cemeteries, Natural and Semi-Natural Greenspace, Open Land in Settlements, and Provision for Children) which demonstrate a positive deviation from the standard requirement indicating that residents are well-catered for in terms of the provision of these typologies.

5.337 However, there are five typologies where provision levels are less than the standard amount required for the size of the population. Consideration should be given as to how additional sites can be provided or given that Haworth only has a small overall deficit whether there are opportunities to rebalance the typologies of the existing spaces.

5.338 The figures show that there is a deficit of Amenity Greenspace, but equally that there is an abundance of Open Land in Settlements space within the village. These typologies perform very similar functions and the additional Open Land in Settlements space above the standard provision level could be seen to compensate for the lack of Amenity Greenspace provision.

5.339 The shortfall in Green and Blue Corridor space may in part be substituted by the additional Natural and Semi-natural Greenspace provision, some of which follows the line of Bridgehouse Beck. In addition, the settlement is surrounded by open countryside with a good provision of public rights of way, which again may provide a substituted for the lack of corridor space within the settlement.

5.340 Of more concern is the significant deficit of Outdoor Sports open space. Although there are nine sites identified under this typology within the settlement area, the majority are small sites. Haworth and Cross Roads could benefit from additional playing field space to ensure there is adequate provision for residents to participate in sports and recreation activities. Additional provision of this type of space is considered to be a high priority.

5.341 There is also a deficit of Parks and Gardens space when assessed against the standards and for size of the population. However, with two existing park spaces already provided, including the well-used Central Park, the priority for increased provision of this type of space is moderate. Consideration should be given as to whether improvements to existing provision would be more beneficial to residents and visitors.

Oakworth

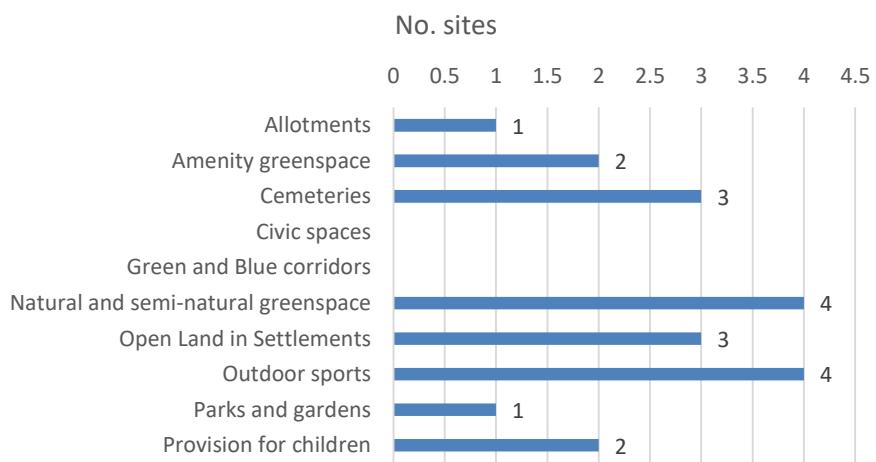

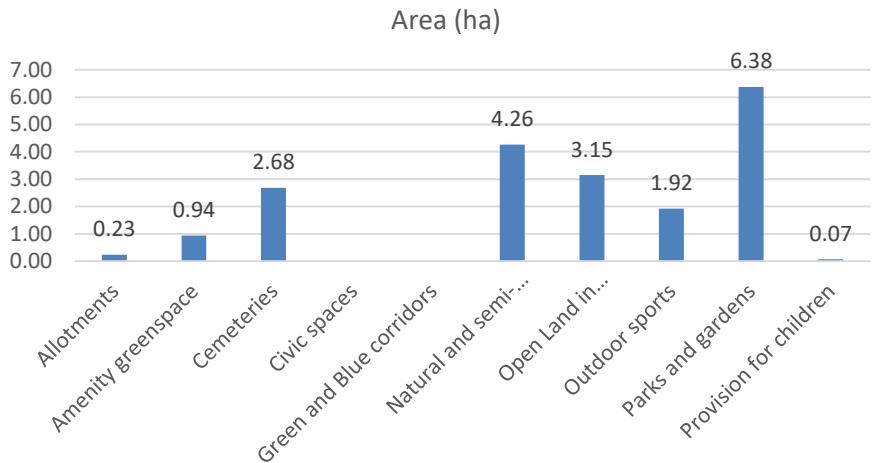

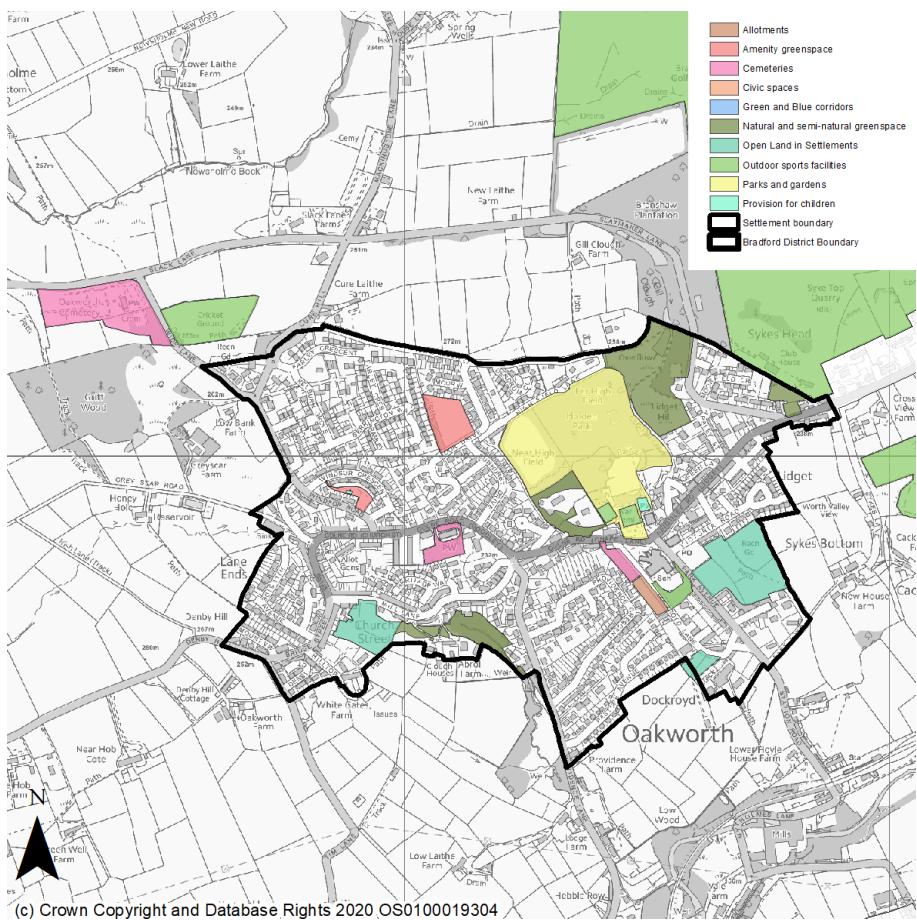

Table 5.40 Summary of provision priorities Oakworth

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	MODERATE	LOW	N/A	HIGH	LOW	LOW	HIGH	LOW	LOW
-0.53	-0.96	1.73	-0.04	-0.76	0.46	1.44	-4.93	2.95	0 (sites)

5.342 The settlement area of Oakworth has **20 sites** identified as open space covering an area of **19.63ha**.

5.343 With a population of 3,804, Oakworth would require 20.58ha of open space to meet the local standards. The figures show that there is a slight deficit in the provision of open space compared to the standards and also some imbalances between the different typologies of open space.

5.344 The audit findings indicate that there is a notable amount of Parks and Gardens space (6.38ha) which is made up of Holden Park. The figures show that there is also a good amount of Cemetery space and Open Land in Settlements space and a sufficient amount of play area provision.

5.345 In terms of the distribution of spaces across the settlement the map shows that there is a good range of spaces present throughout the village. The central location of Holden Park and other key spaces provides residents with good access to these facilities and the distance people have to travel. The residential areas in the north west and south east have limited designated open space, but most of these properties have private garden which provides a level of outdoor space and these areas are within an accessible distance to some form of space.

5.346 There are a number of **key sites** within the Oakworth settlement area including:

- Holden Park
- Oakworth Cemetery
- Colne Road Cemetery
- Dockroyd Lane Allotments

5.347 Table 5.40 provides a summary of the provision priorities for the Oakworth settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that four typologies (Natural and Semi-natural Greenspace, Cemeteries, Open Land in Settlements and Parks and Gardens) see a positive deviation from the standards, meaning that provision of these typologies is greater than the expected level of provision for the size of the population. The figures also show that the provision of play area space meets the standards.

5.348 However, for the other five typologies there are varying levels of deficiency in supply. Most notably is the deficit of Outdoor Sports open space. Existing provision comprises of the Cricket Ground, School play area, bowling green and tennis courts. There is

additional provision in neighbouring Keighley in the form of the Bronte Playing Fields and Sports Facility. This provision is easily accessed from Oakworth and may compensate for the low levels of provision within Oakworth village.

5.349 There are also smaller deficits of Allotment space, Amenity Greenspace, Civic space and Green and Blue corridors. The provision of additional allotment space should be considered along with the findings of the Open Space Needs and Demands Assessment to establish the level of priority. Additional Amenity Greenspace could be considered as part of any new development within Oakworth.

## Oxenhope

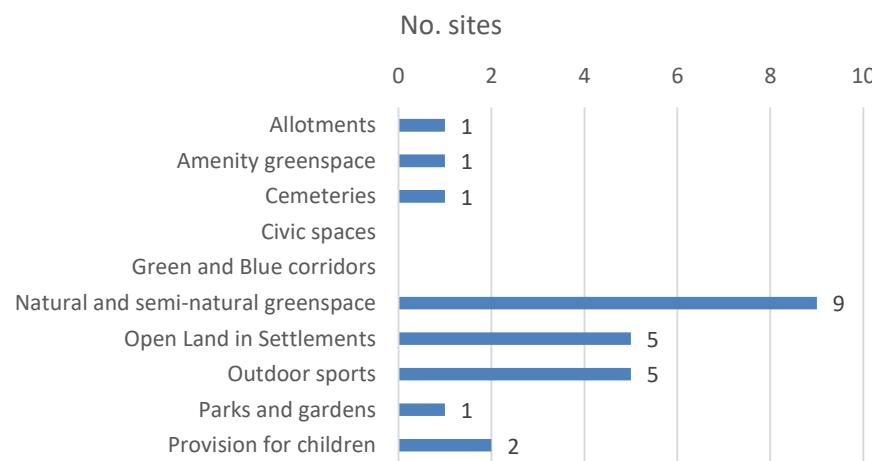

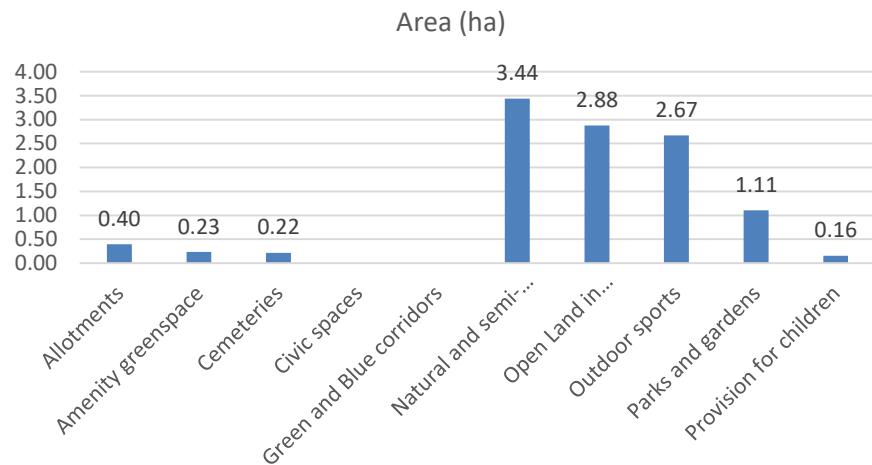

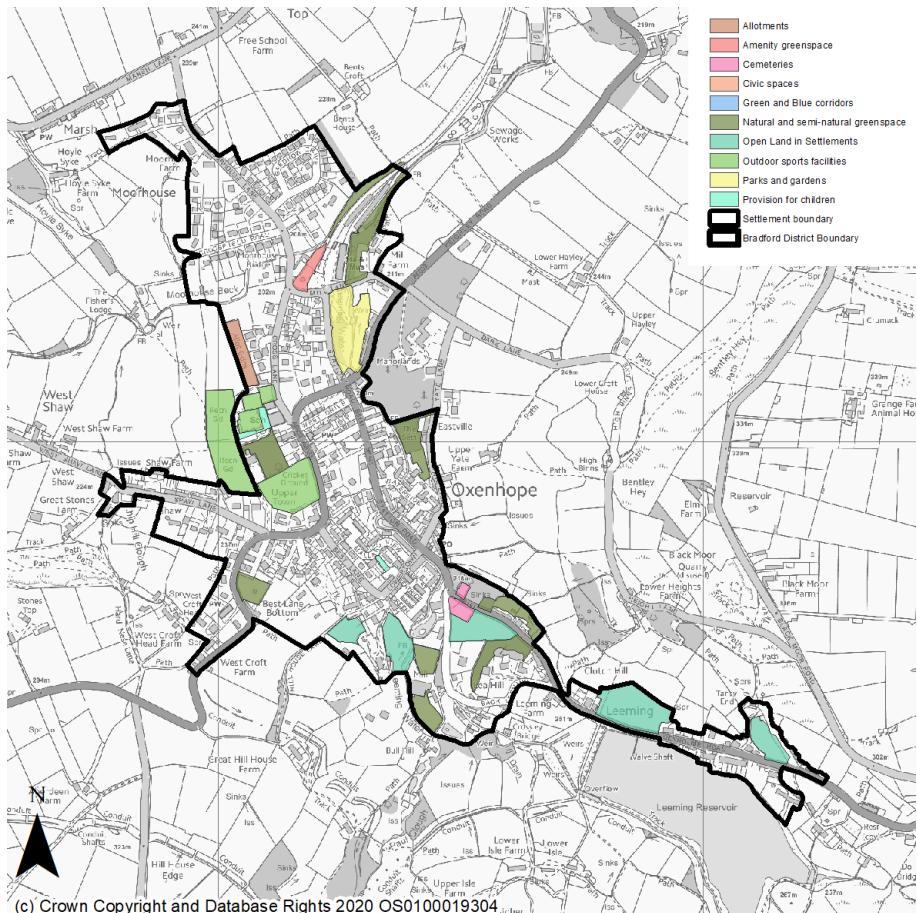

Table 5.41 Summary of provision priorities Oxenhope

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>MODERATE</b>	<b>MODERATE</b>	<b>N/A</b>	<b>HIGH</b>	<b>LOW</b>	<b>LOW</b>	<b>Moderate</b>	<b>Moderate</b>	<b>LOW</b>
<b>0.02</b>	<b>-0.70</b>	<b>-0.25</b>	<b>-0.02</b>	<b>-0.37</b>	<b>1.56</b>	<b>2.04</b>	<b>-0.70</b>	<b>-0.58</b>	<b>1 (site)</b>

5.350 The settlement area of Oxenhope has **25 sites** identified as open space covering an area of **11.10ha**.

5.351 With a population of 1,872, Oxenhope would require 10.13ha of open space to meet the local standards. The figures show that there is a small deficit in the provision of open space compared to the standards and also some imbalances between the different typologies of open space.

5.352 The data shows that Oxenhope has a good amount of Natural and Semi-natural Greenspace (9 sites, 3.44ha) and a number of Open Land in Settlements sites (5 sites, 2.88ha) and the distribution of these sites supports the wider Green Infrastructure network.

5.353 In terms of the distribution of spaces across the settlement the map shows that there is a reasonably good dissemination of open space sites throughout the village. The majority of publically accessible spaces are located in the central area of Oxenhope with more limited provision in the south at Leeming.

5.354 There are a number of **key sites** within the Oxenhope settlement area including:

- Oxenhope Millennium Green
- Oxenhope Cricket Ground
- Shaw Lane Playing Fields

5.355 Table 5.41 provides a summary of the provision priorities for the Oxenhope settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that six of the ten typologies demonstrate small deficits of provision and should be the focus for any new provision. Whereas provision of Natural and Semi-natural Greenspace, Open Land in Settlements and Provision for Children all show a positive deviation from the standards and therefore the priority for additional provision of these type of spaces is low.

5.356 In terms of those typologies which show a negative deviation from the standard, the Outdoor Sports and Amenity Greenspace typologies both have the greatest deficits, but the amounts are less than 1ha each. The excess of Open Land in Settlements space may partly compensate for the lack of Amenity Greenspace provision. Similarly the notable provision of Natural and Semi-natural Greenspace may provide a substitute for the slight deficit in the Green and Blue Corridor space. Furthermore, Oxenhope is surrounded by open countryside with a good network of public rights of way which also partly provide a substitute for Green and

Blue Corridors. The provision of additional Outdoor Sports space should be considered as a high priority to ensure that the residents of Oxenhope have adequate opportunity to participate in sport and recreation activities. The findings of the Playing Pitch Strategy and Open Space Needs and Demands Assessment help to identify those areas where additional outdoor sports sites and facilities are required.

- 5.357 Cemetery and civic space is usually provided at a sub-area level in the larger Principal Towns or the Regional City and therefore poor provision in Oxenhope is not of particular concern.
- 5.358 There is a slight deficit of Park and Garden space, and any opportunities for additional provision of this type of space should be seen as a high priority.

## Queensbury

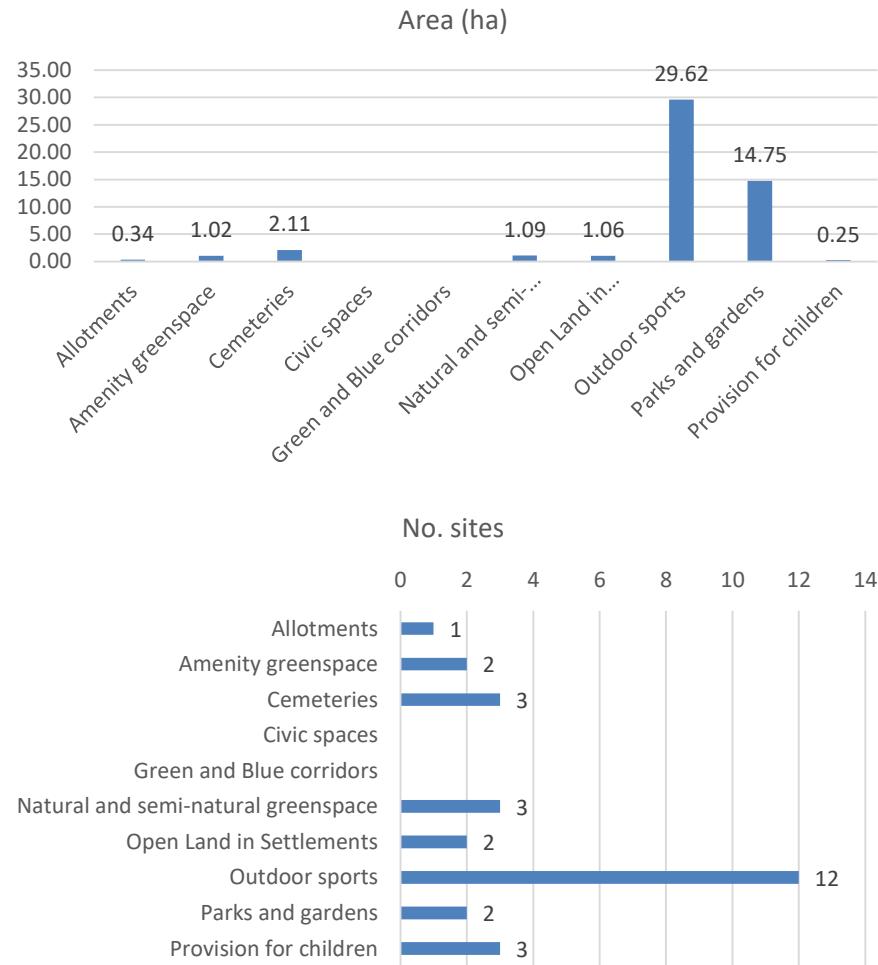

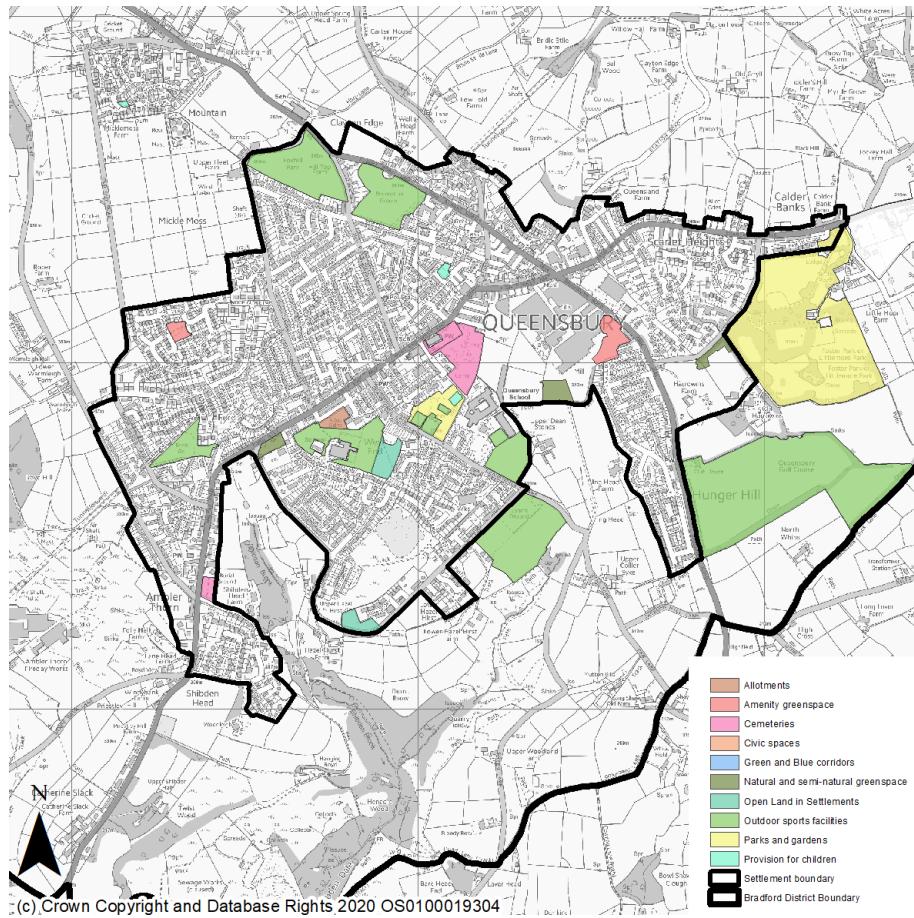

Table 5.42 Summary of provision priorities Queensbury

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>N/A</b>	<b>HIGH</b>	<b>HIGH</b>	<b>HIGH</b>	<b>LOW</b>	<b>LOW</b>	<b>MODERATE</b>
<b>-1.43</b>	<b>-3.40</b>	<b>-0.10</b>	<b>-0.09</b>	<b>-1.77</b>	<b>-7.76</b>	<b>-2.92</b>	<b>13.69</b>	<b>6.78</b>	<b>-1 (site)</b>

5.359 The settlement area of Queensbury has **28 sites** identified as open space covering an area of **50.24ha**.

5.360 With a population of 8,848, Queensbury would require 46.47ha of open space to meet the local standards. The figures show that the actual amount of open space serving Queensbury is slightly greater than the standard provision level. However, this is mainly due to the large amount of Outdoor Sports and Parks and Gardens open space situated on the east edge of the settlement, including land at Queensbury Golf Course and Foster/Littlemoor Park. Although there is a positive deviation from the overall requirement figure, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.361 In terms of the distribution of spaces across the settlement the map shows that there is a reasonable spread of open space sites within the settlement area. However, there is a notable concentration of spaces in the centre of the settlement, particularly around Russell Hall Park. The map also shows that there is less provision immediately to the north of West End/Ford Hill, but on the whole the majority of residents have reasonably easy access to some form of open space.

5.362 There are a number of **key sites** within Queensbury including:

- Foster / Littlemoor Park
- Russell Hall Park
- Long Lane Playing Fields
- Foxhill Park Football Pitch
- Albert Road Playing Fields
- Queensbury Golf Course

5.363 Table 5.42 provides a summary of the provision priorities for the Queensbury settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that there are only two typologies (Outdoor Sports and Parks and Gardens) with a positive deviation from the standard, meaning that provision of these types of open space is above the expected levels for the size of the population. For all the other typologies there are deficits in provision, although the scale of the deficiency varies between the different types.

5.364 The typology with the highest level of deficiency is Natural and Semi-natural Greenspace. There is a notable negative deviation from the standard provision requirement for this typology, with a very limited number of existing sites within the settlement area. However, there are areas of Natural and Semi-natural greenspace located on the edge of Queensbury which are not included in the audit, such as along the Shibden Brook corridor. These spaces provide an alternative level of provision, although the provision of additional Natural and Semi-natural Greenspace within the settlement should be considered as a high priority.

5.365 Queensbury is also surrounded by open countryside with a good network of public rights of way. This allows access to the wider countryside including other areas of Natural and Semi-natural Greenspace and also provides a proxy for the deficit of Green and Blue Corridor space within the settlement.

5.366 Queensbury also has a high deficiency of Amenity Greenspace. This typology is often associated with new housing estates where small spaces are provided to break-up the urban mass and provide space for those properties without private gardens. Although Queensbury has seen a number of housing developments, the amenity greenspace that has been provided has often fallen below the site size threshold to be included in the audit and many of these developments are made up of houses with gardens which provides occupants with a form of outdoor space. However, any new developments within Queensbury should look to incorporate areas of Amenity Greenspace to ensure sufficient provision for residents and to reduce the deficit of provision.

5.367 In terms of Allotment provision, Queensbury currently only has one small site of 0.34ha. For the size of the population, there is a notable lack of provision. Consideration should be given to identifying a suitable site to ensure adequate provision of allotment space for residents and this should be a high priority. The findings of the Open Space Needs and Demands assessment should also be taken into account to assess the demand for additional provision.

5.368 There is a deficit of one play area site in Queensbury and existing provision is concentrated centrally at Russell Hall Park and at Osbourne Drive. There is also a small site serving residents in Mountain. Although the site at Russell Hall Park is identified as a destination space and the accessibility standard of 1,000m for such spaces means the majority of Queensbury residents have good access, there is a notable lack of more immediate localised or doorstep play space in some of the more concentrated residential areas. The provision of additional play area space should be considered as a high priority in Queensbury.

5.369 There are also deficits of Cemetery, Civic and Open Land in Settlements space within Queensbury. However, the provision of such typologies is often focussed at a sub-area level and not always provided in the lower order settlements such as Queensbury. The deficit of cemetery and civic space is very small. The Open Land in Settlements deficit is larger, but may be compensated for through the provision of similar typologies and spaces such as Foster/Littlemoor Park.

## Thornton

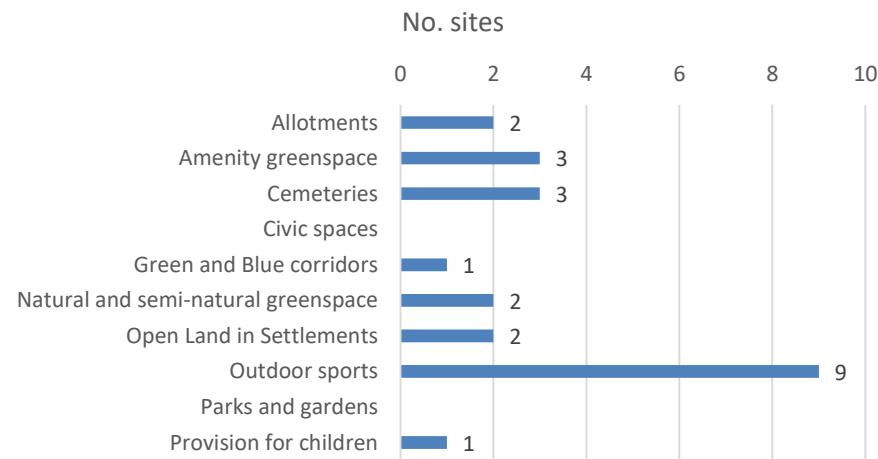

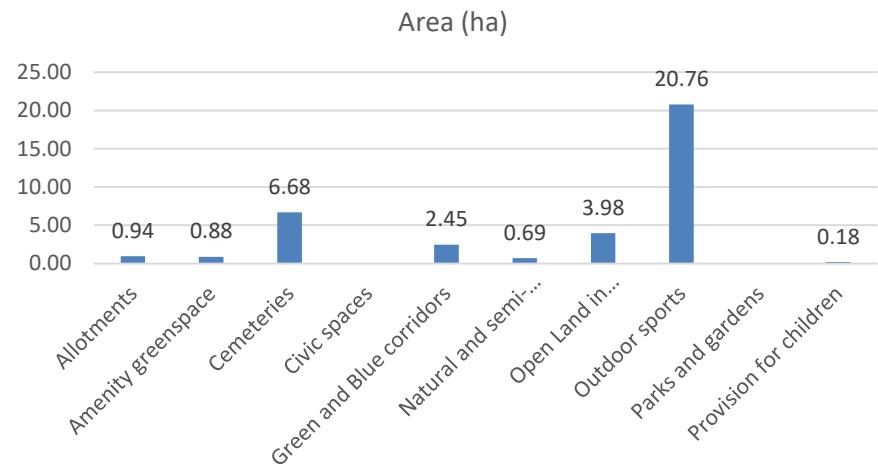

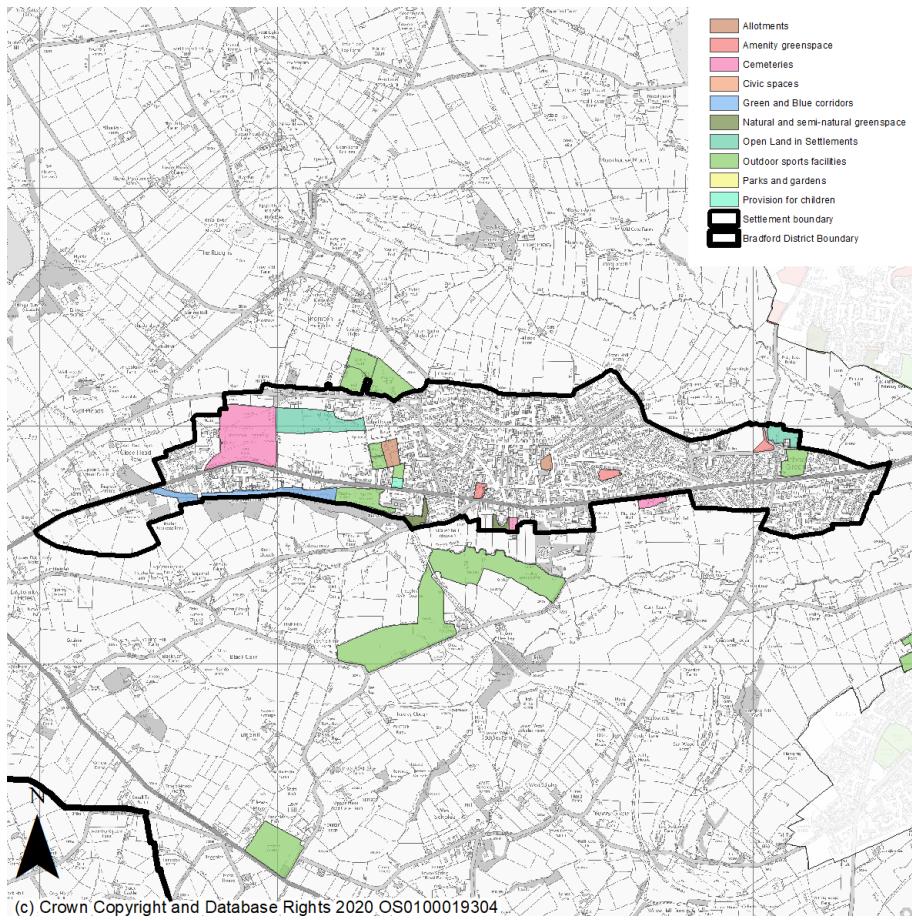

Table 5.43 Summary of provision priorities Thornton

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	HIGH	LOW	N/A	LOW	HIGH	LOW	LOW	HIGH	MODERATE
-0.23	-2.03	5.22	-0.06	1.29	-5.13	1.36	10.28	-5.24	-1 (site)

5.370 The settlement area of Thornton has **23 sites** identified as open space covering an area of **36.56ha**.

5.371 With a population of 5,822, Thornton would require 31.50ha of open space to meet the local standards. The figures show that the actual amount of open space serving Thornton is greater than the standard provision level. However, this is mainly due to the large amount of Outdoor Sports open space in the form of Headley Golf course which is located to the south of the village and accounts for 13.65ha. Although there is a positive deviation from the overall requirement figure, there is a notable imbalance between the different typologies of open space that currently exist in the settlement.

5.372 In terms of the distribution of spaces across the settlement the map shows that there is a reasonably good spread of sites throughout the village, although there is a notable concentration to the west where the recreation ground, cricket pitch, cemetery and play area are all located. Within the northern and central parts of the settlement there is a more limited amount of space.

5.373 There are a number of **key sites** within the Thornton settlement area including:

- Thornton Cemetery
- Thornton Recreation Ground
- Royd Street Recreation Ground
- Royd Street Play Area
- The Great Northern Railway Trail
- Headley Golf Course

5.374 Table 5.43 provides a summary of the provision priorities for the Thornton settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that there are four typologies (Cemeteries, Green and Blue Corridors, Open Land in Settlements and Outdoor Sports) which demonstrate positive deviations from the standard provision requirement, meaning that the amount of these spaces is more than expected for the size of the population. However, the findings from the audit also show that there are six typologies which have a deficit of provision. Any opportunities to provide additional open space within the village should look to prioritise the provision of these typologies.

5.375 The typology with the greatest deficit of provision is Parks and Gardens. Thornton currently has no park provision; indeed, it is the second largest settlement in the District (in terms of population) which does not have a dedicated park site. Residents of Thornton rely on other areas of open space, such as the cemetery to fulfil the role of a park. But the provision of a dedicated park space would benefit the local community and consideration should be given, as a high priority, to identifying a suitable site.

5.376 The data also indicates that there is a poor amount of Natural and Semi-natural Greenspace and Amenity Greenspace provision within the settlement area. However, Thornton is surrounded by open countryside which is easily accessible from the residential areas of the village, and this in part compensates for the lower levels of provision of these types of spaces within the settlement itself. The large amounts of cemetery and open land in settlements space also provides a similar but alternative type of provision for residents who wish to experience the natural environment. In new developments consideration should be given to ensuring the provision of Amenity Greenspace especially where this can link to other areas of open space and help to provide connections as part of the wider Green Infrastructure network.

5.377 The audit shows that there is also a small deficit of allotment space compared to the standard provision requirement. The Top Royd allotment site is the main allotment provision in the village. There is land to the north of the existing site which could provide additional space. The findings from the Open Space Needs and Demands assessment should also be considered when determining the level of demand and priority for additional provision.

5.378 Thornton currently only has one play area site at Royd Street which is located off Thornton Road to the west of the main residential area. The audit findings show that there is a deficit of at least one play area site and that an additional site is needed to meet the standards and ensure sufficient provision for residents.

## Wilsden

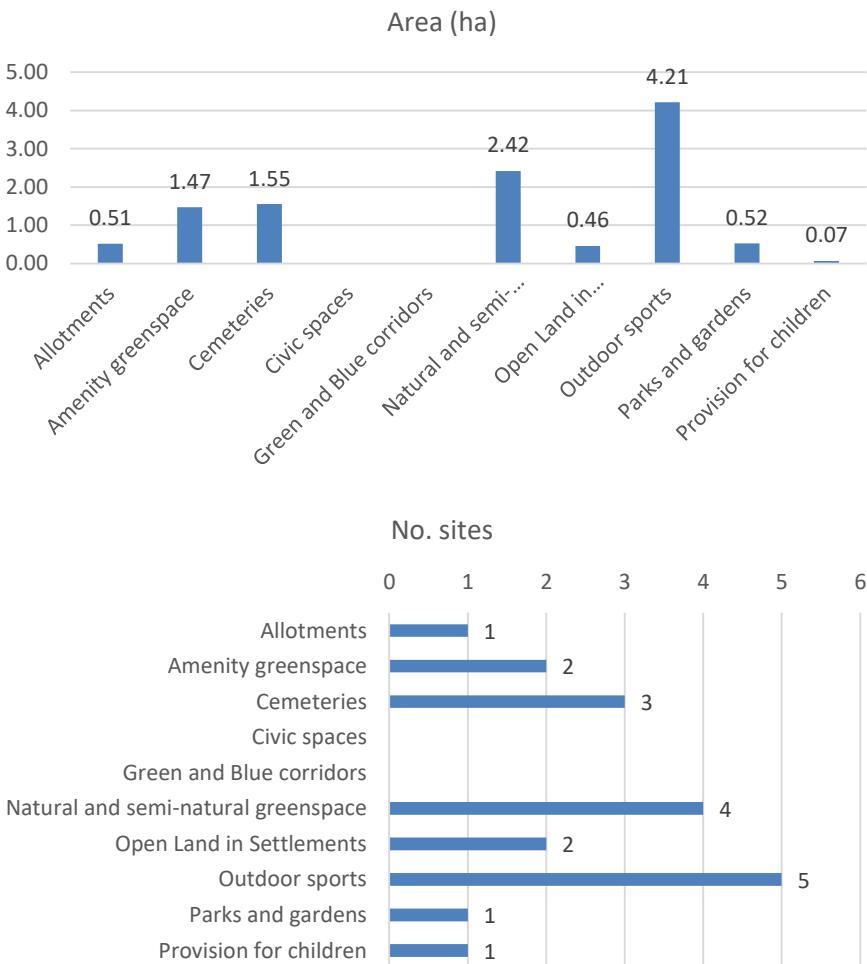

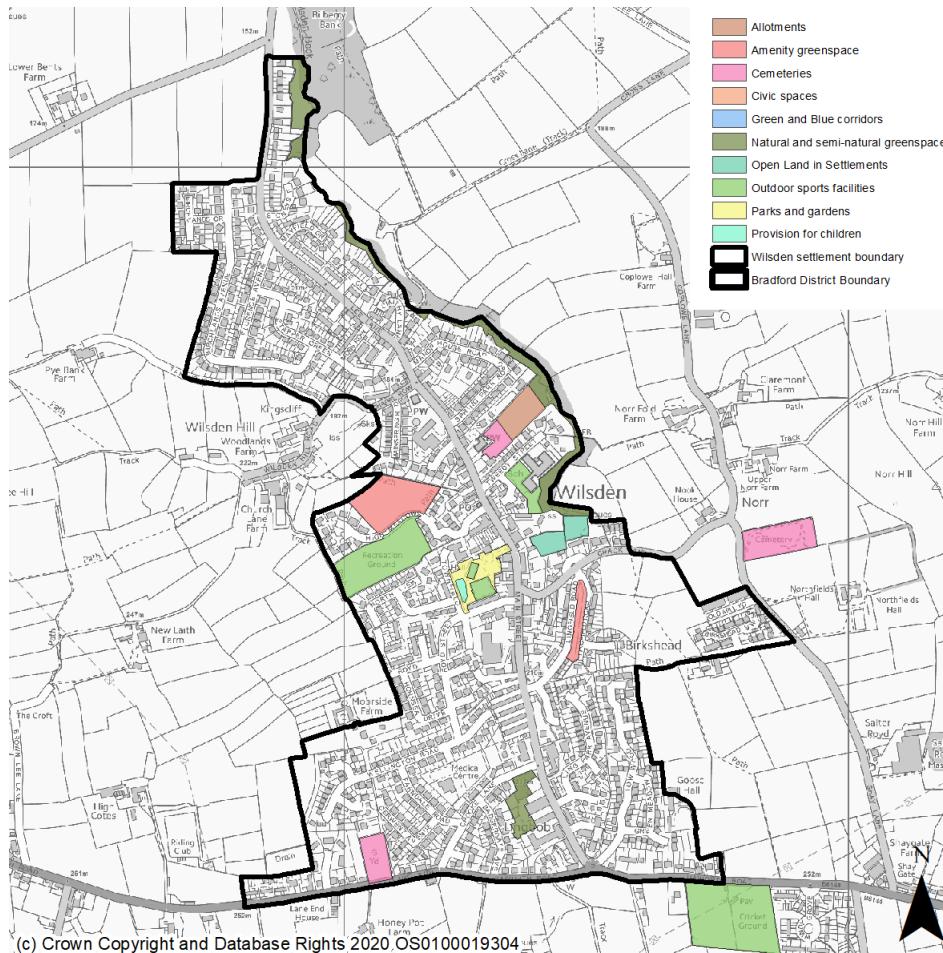

Table 5.44 Summary of provision priorities Wilsden

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	MODERATE	LOW	N/A	HIGH	HIGH	HIGH	HIGH	HIGH	MODERATE
-0.27	-0.49	0.57	-0.04	-0.78	-1.51	-1.30	-2.85	-3.01	-1 (sites)

5.379 The settlement area of Wilsden has **19 sites** identified as open space covering an area of **11.21ha**.

5.380 With a population of 3,924, Wilsden would require 21.23ha of open space to meet the local standards. The figures show that there is a significant deficit in provision with just over half the amount of required open space being available within the settlement area. The data also shows an imbalance between the different typologies of open space that currently exist in the settlement.

5.381 In terms of the distribution of spaces across the settlement the map shows that there is a reasonable spread of spaces but with a notable concentration located in the centre of the village around the village hall. This area sees the provision of a park, play area facilities, recreation ground and allotment space. Whereas the residential areas to the north and south have more limited levels of provision.

5.382 There are a number of **key sites** within the Wilsden settlement area including:

- Wilsden Park
- Wilsden Recreation Ground
- High Meadows Amenity Space
- Wilsden Cricket Ground

5.383 Table 5.44 provides a summary of the provision priorities for the Wilsden settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that apart from the Cemeteries typology which shows a positive deviation from the standard requirement, there is a deficit of all other types of open space in Wilsden. However, the level of deficit varies between the different types of spaces and therefore the priority for increased provision of some types of space is more pressing.

5.384 The typologies with the highest deficits are Parks and Gardens and Outdoor Sports open space. The existing park space (Wilsden Park) is relatively small in size and incorporates a number of other types of open space including a children's play area and a bowling green. In terms of outdoor sports provision, the recreation ground off High Meadows and the Cricket Ground off Wilsden Road provide the majority of the existing provision. Wilsden would benefit from additional parks and outdoor sports open space and these typologies should be the priority for any new open space to be provided in Wilsden.

5.385 There are also notable deficits of Natural and Semi-natural Greenspace, Open Land in Settlements and Green and Blue Corridor space. However, Wilsden is surrounded by open countryside and there are some Natural and Semi-natural Greenspace sites outside of the settlement, especially along Wilsden Beck, which in part offer compensatory provision for the lack of this type of space in the settlement. There is also a good network of public rights of way connecting the settlement to the countryside which provide a substitute for the low provision of Green and Blue corridors in the settlement. Where additional open space is to be provided, consideration should be given to providing such spaces where this would improve connections as part of the wider Green Infrastructure of the village.

5.386 The audit findings also show a deficit of play area sites. There is currently just one play area in Wilsden, located in Wilsden Park in the centre of the village. This location means that the site can be well accessed by a large proportion of the local population, however, there is a lack of more localised, doorstep play areas in the more residential areas of village. The village would benefit from an additional play area space and consideration should be given to the location of this site to help ensure equitable access.

5.387 Wilsden currently has one allotment site located to the east of Main Street. The findings from the audit work show that there is a slight deficit in the amount of allotment space that is provided when compared to the standards and the size of the population in Wilsden. The opportunity to provide additional allotment space should be supported and consideration should be given to the findings of the Open Space Needs and Demands Assessment which highlights the level of demand for allotments in each settlement.

Addingham

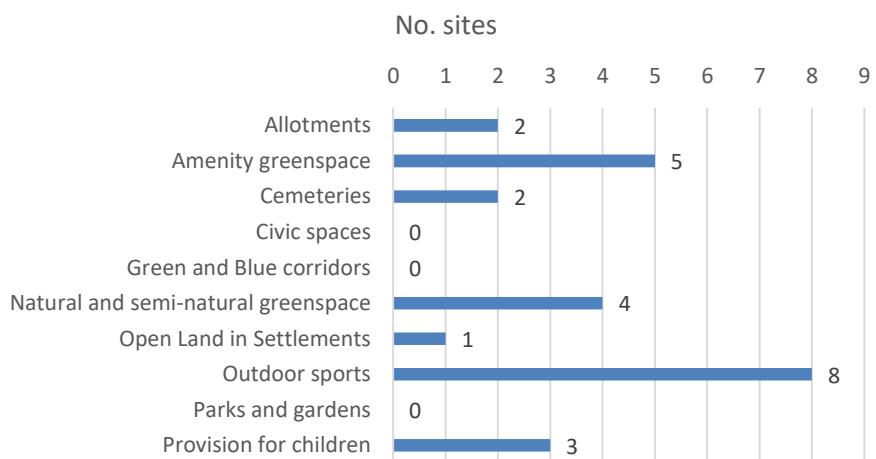

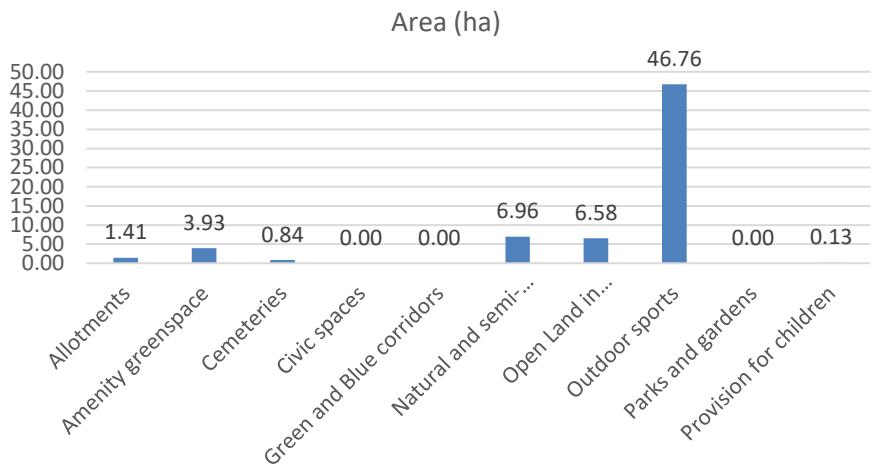

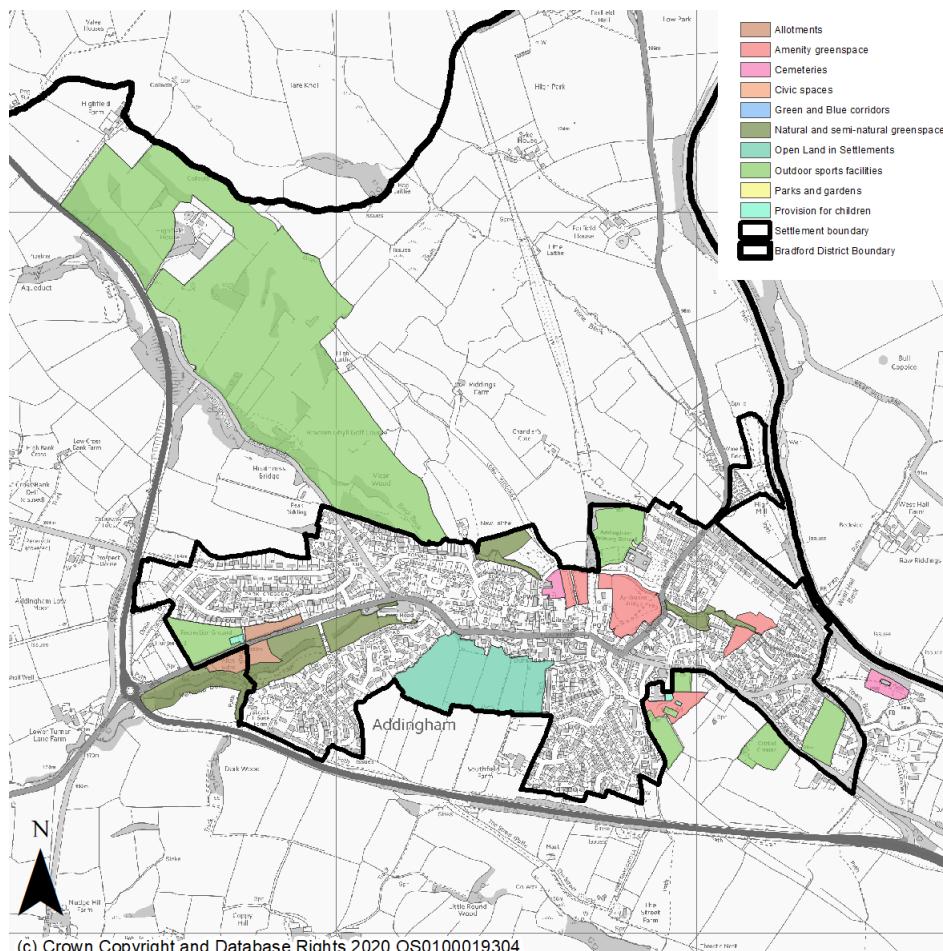

Table 5.45 Summary of provision priorities Addingham

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	LOW	LOW	N/A	HIGH	LOW	LOW	LOW	HIGH	LOW
0.78	2.34	0.05	-0.03	-0.63	3.79	5.15	41.05	-2.85	2 (sites)

5.388 The settlement area of Addingham has **25 sites** identified as open space covering an area of **66.61ha**.

5.389 With a population of 3,172, Addingham requires 17.16ha of open space to meet the local standards. The figures show that the actual amount of open space serving Addingham is significantly greater than the requirement. This is largely due to the golf course which accounts for 39.77ha (60%) of the total area. Although there is still a positive deviation from the overall requirement figure if the golf course was removed, there is some degree of imbalance between the different typologies of open space that currently exist in the settlement.

5.390 There is a notable amount of outdoor sports open space in this settlement area but as previous indicated this is due to the inclusion of Addingham Golf course within the figures, which is a large site located in the Green Belt to the north of the settlement. Addingham also has good levels of Amenity Greenspace, Natural and Semi-natural Greenspace, Open Land in Settlements and provision for Children. However, there is a notable lack of provision of Parks and Gardens open space, Civic Space and Green and Blue Corridors.

5.391 In terms of the distribution of spaces across the settlement the map shows that there is a good dispersal of spaces throughout Addingham. The two play areas are located at either ends of the village which allows some equality of access between different residential areas. There is also sports field provision at either end of the settlement as well as Amenity Greenspace and Natural and Semi-natural Greenspace distributed through the village. Residents therefore have good access to a range of different types of open space.

5.392 There are a number of **key sites** within the Addingham settlement area including:

- Addingham Golf Course
- Addingham Cricket Club
- Silsden Road Playing Field and play area
- Silsden Road Allotments

5.393 Table 5.45 provides a summary of the provision priorities for the Addingham settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that with the exception of Civic Spaces, Green and Blue Corridors, and Parks and Gardens, all typologies exceed the expected amount of

provision compared to the standards. This indicates that Addingham is well served by most types of open space and there is a low priority for increased provision of most typologies.

5.394 However, there is a notable deficit of Parks and Gardens space and no existing provision of this type in the settlement. There are alternative types of space which may compensate for the lack of provision and on balance Addingham has a good amount of open space. Where there is opportunity to create additional open space, the Parks and Gardens typology is identified as a high priority.

## Burley-in-Wharfedale

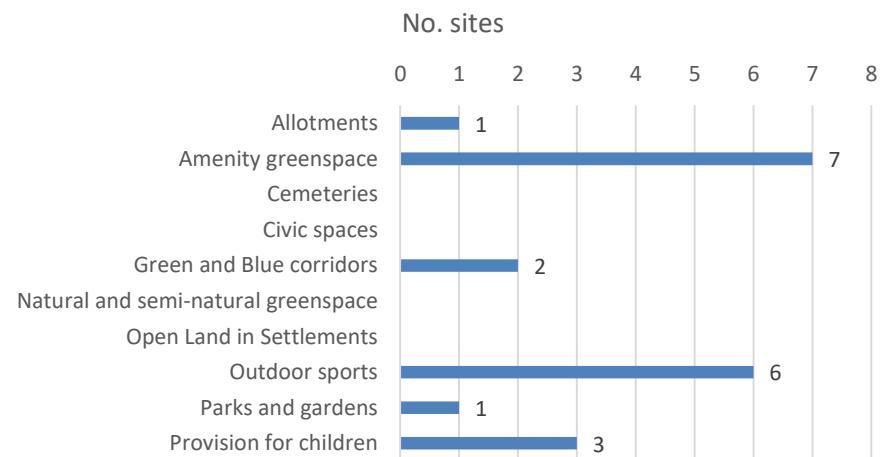

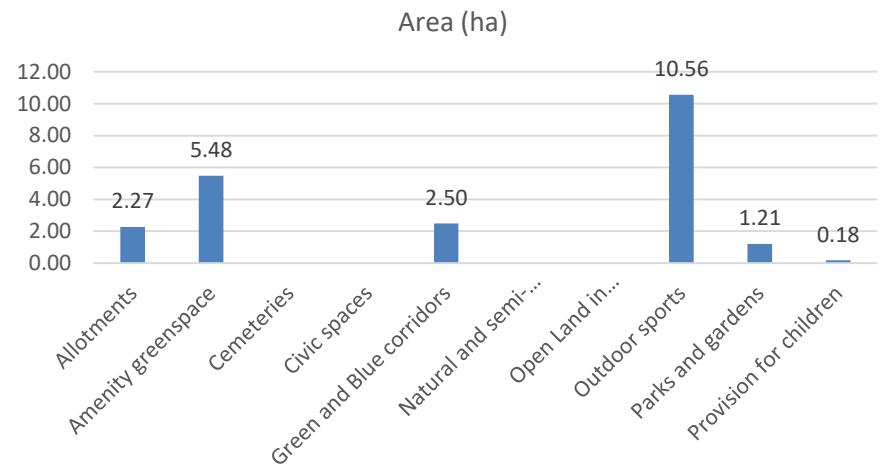

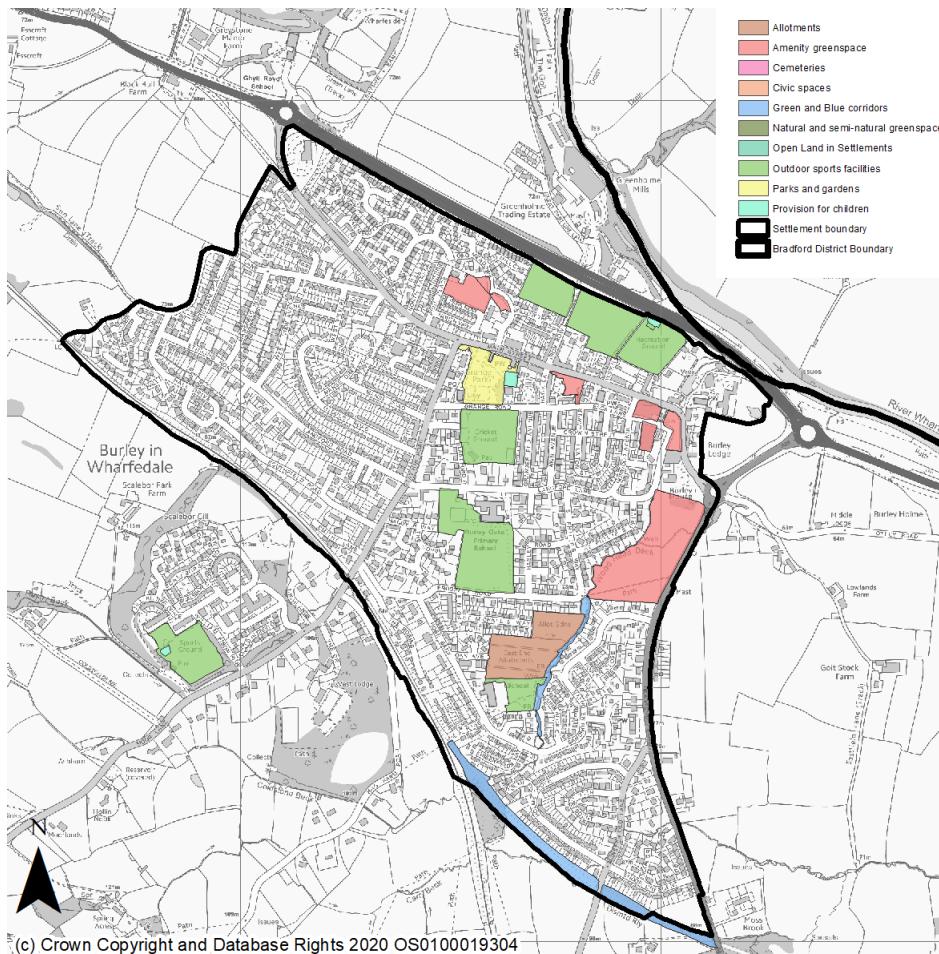

Table 5.46 Summary of provision priorities Burley-in-Wharfedale

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
LOW	LOW	HIGH	N/A	LOW	HIGH	HIGH	MODERATE	HIGH	LOW
1.02	2.36	-1.56	-0.06	1.25	-6.25	-2.81	-0.69	-4.41	1 (sites)

5.395 The settlement area of Burley has 20 **sites** identified as open space covering a total area of **22.21ha**.

5.396 With a population of 6,247, Burley requires 33.80ha of open space to meet the local standards. The figures show that there is a deficit in provision and also an imbalance between the different typologies of open space that currently exist in the settlement.

5.397 In terms of the quantity of provision, there is a notable amount of Amenity Greenspace in the settlement area, which can be attributed to the large site at Burley House Field. There are also good levels of provision of Allotments, and Green and Blue Corridor space and adequate provision of play area space for children. There are four typologies which have no provision in Burley, these are Cemeteries, Civic Spaces, Natural and Semi-Natural Greenspace and Open Land in Settlements space.

5.398 In terms of the distribution of spaces across the settlement the map shows that there is a concentration of open space sites in the historic core of the settlement and in the eastern half of the settlement. The western part of the settlement has no open space provision. The majority of dwellings in this area have private gardens which provides a level of outdoor space for residents, and the distances to the formal open spaces in the centre of the village are relatively short which means access is reasonably good. However, any increase in development on the western side of the village should include additional open space provision and should be of a typology which is current deficient.

5.399 There are a number of **key sites** within the Burley settlement area including:

- Grange Park
- Burley-in-Wharfedale Cricket Club
- Burley House Field
- East End Allotments

5.400 Table 5.46 provides a summary of the provision priorities for the Burley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis. It shows that four typologies (Allotments, Amenity Greenspace, Green and Blue Corridors, and Provision for Children) have a positive deviation when compared against the required provision levels and the priority for additional provision of these types of open space is low.

5.401 Of the remaining typologies there are significant deficits of Natural and Semi-natural Greenspace, Parks and Gardens, Open Land in Settlements and Cemeteries.

5.402 In terms of the provision of Natural and Semi-natural Greenspace, the settlement is surrounded by open countryside which in part compensates for the lack of provision within the settlement itself. Furthermore, the Sun Lane nature reserve is also in close proximity to the settlement and partly fulfils the need for provision of this type of space. However, where opportunities arise to provide additional open space, consideration should be given to the provision of Natural and Semi-natural Greenspace as a high priority.

5.403 Although there is some level of park provision in the settlement with Grange Park, the data indicates that additional space should be provided to meet the standards. Amenity Greenspace can often play a similar role to Parks and there is a good level of provision of this type of space at Burley House Field which may partly compensate for the lack of park space. However, an additional Park space on the western side of the settlement would be beneficial to residents in that part of Burley, particularly in terms of ensuring good access.

5.404 The lack of Cemetery space in smaller settlements is not unusual, as cemeteries are often provided at a sub-area level. So although there is a notable deficit of this type of space the priority for additional provision needs to be seen in the context of wider cemetery provision.

5.405 Similarly, the Open Land in Settlements typology is a locally defined typology and is not present in all settlements. In Burley the Amenity Greenspace site at Burley House Field helps to provide a similar type of space and partly compensates for the deficit in provision.

5.406 There is a small deficit of outdoor sports open space and therefore additional provision of this type of space is a moderate priority.

## Ilkley

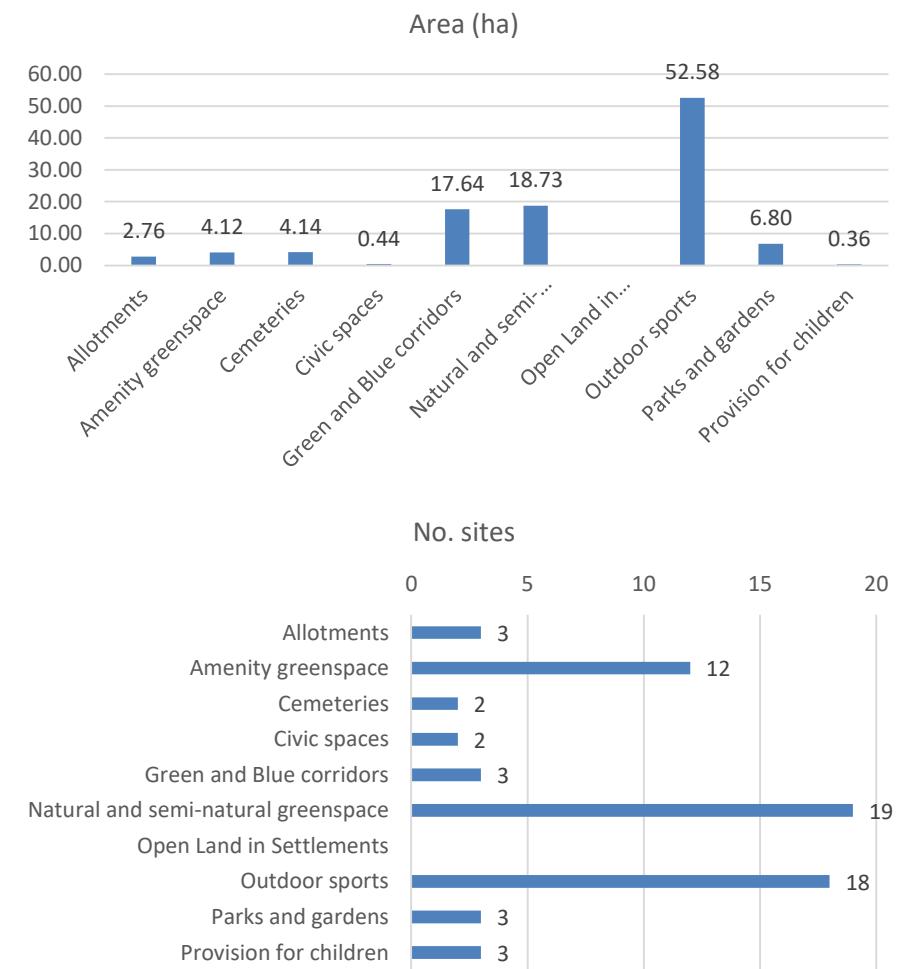

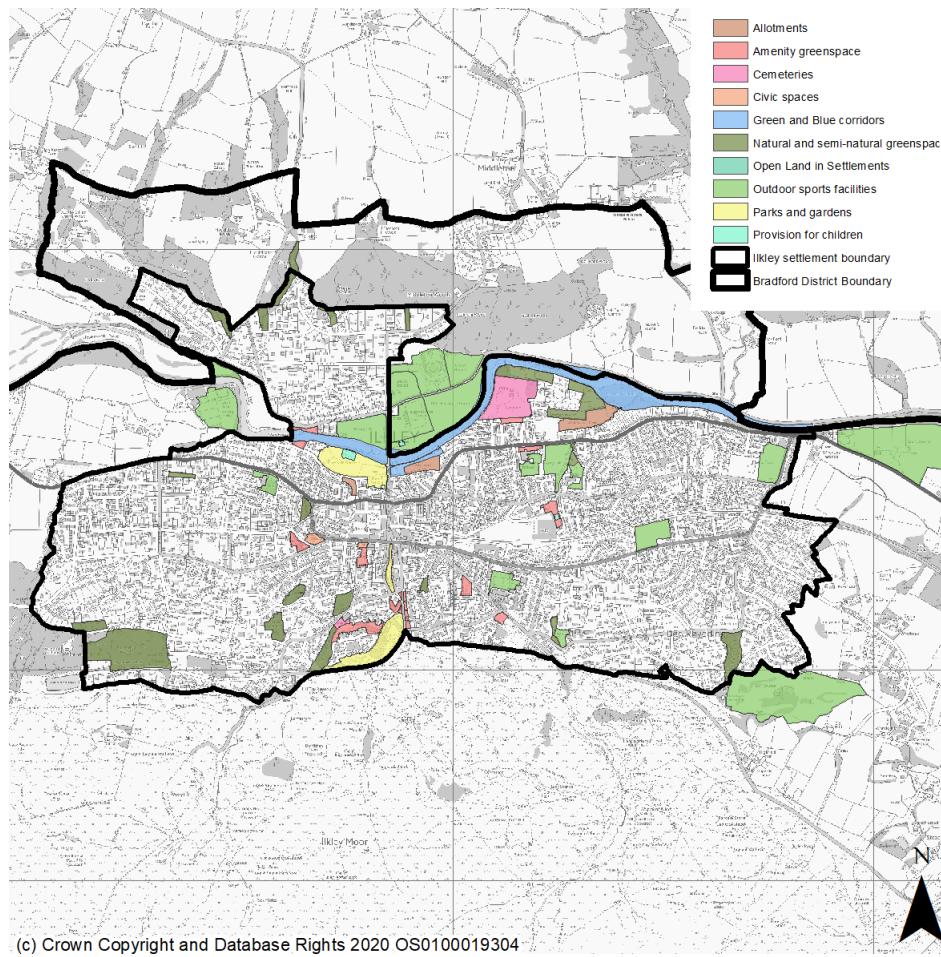

Table 5.47 Summary of provision priorities Ilkley

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
<b>MODERATE</b>	<b>HIGH</b>	<b>LOW</b>	<b>N/A</b>	<b>LOW</b>	<b>LOW</b>	<b>HIGH</b>	<b>LOW</b>	<b>HIGH</b>	<b>HIGH</b>
<b>-0.12</b>	<b>-3.08</b>	<b>0.54</b>	<b>0.30</b>	<b>14.76</b>	<b>4.34</b>	<b>-6.48</b>	<b>26.67</b>	<b>-6.16</b>	<b>-3 (sites)</b>

5.407 The settlement area of Ilkley has **65 sites** identified as open space covering an area of **107.57ha**.

5.408 With a population of 14,394, Ilkley requires 77.87ha of open space to meet the local standards. The figures show that the actual amount of open space serving Ilkley is notably greater than the requirement. This is partly due to the inclusion of Ben Rhydding golf course in the figures, but also reflects the outdoor sports provision at north Ilkley and at Ben Rhydding. Although there is a positive deviation from the overall requirement figure, there is some degree of imbalance between the different typologies of open space that currently exist in the settlement.

5.409 The data shows that there are good levels of provision of Outdoor Sports, Natural and Semi-natural Greenspace, Green and Blue Corridors, Cemeteries and Civic Space. All other typologies, except for Open Land in Settlements, are also provided in some form. Further analysis relating to provision against the standards is provided below.

5.410 In terms of the distribution of spaces across the settlement the map shows that there is a reasonably good dissemination of sites throughout Ilkley. Although there are clearly some areas with a noticeable concentration of open space sites. This is seen at the northern part of the settlement along the River Wharfe with Riverside Park, Middleton/East Holme Sports Fields, the Lido, Ilkley Cemetery and allotment provision. There are also two key residential areas with low levels of provision, particularly to the west and south east, although the majority of dwellings in these areas have private garden which gives residents some provision of outdoor space.

5.411 There are a number of **key sites** within the Ilkley settlement area including:

- Riverside Gardens/Ilkley Park
- Middleton Sports Ground/East Holme Fields
- Ilkley Cricket Club
- Olicanian Cricket Club
- Ilkley Lido
- Ilkley Cemetery
- West View Park
- Ilkley Lawn Tennis and Squash Club
- Dansk Way Allotments
- Ben Rhydding Golf Club
- Ben Rhydding Sports Club

5.412 Table 5.47 provides a summary of the provision priorities for the Ilkley settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that provision of Cemetery, Civic, Green and Blue Corridors, Natural and Semi-natural Greenspace, and Outdoor Sports space all perform well against the standards with a positive deviation in provision. However, there are notable deficits in Amenity Greenspace, Open Land in Settlements, Parks and Gardens and Provision for Children.

5.413 Ilkley is surrounded by open countryside and has a good level of Natural and Semi-natural Greenspace within the settlement area which may partly compensate for the lack of Amenity Greenspace and Open Land in Settlements. New developments should look to include areas of Amenity Greenspace to help break-up the urban mass and reflect the character of the area. The Open Land in Settlements typology is a locally derived type of space which is not a mandatory requirement and its provision often reflects the development of a place overtime. In Ilkley other types of open space fulfil this function.

5.414 Of greater concern is the deficit in Park and Garden provision and play area provision. Although Ilkley boasts the popular Riverside Gardens park, which is well used, the town would benefit from additional park provision either to the west or east of the existing settlement where access is poorer. In terms of the provision of additional play areas, the data indicates that Ilkley has a deficit of three play area sites. The existing three sites are located in reasonably close proximity to each other in the central area of the town. Therefore, any new development on the west or east of the settlement should ensure provision of play area space is a high priority.

## Menston

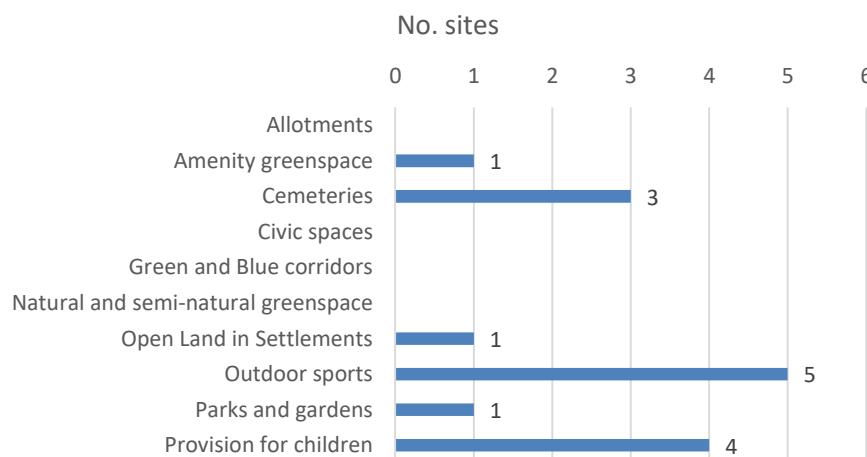

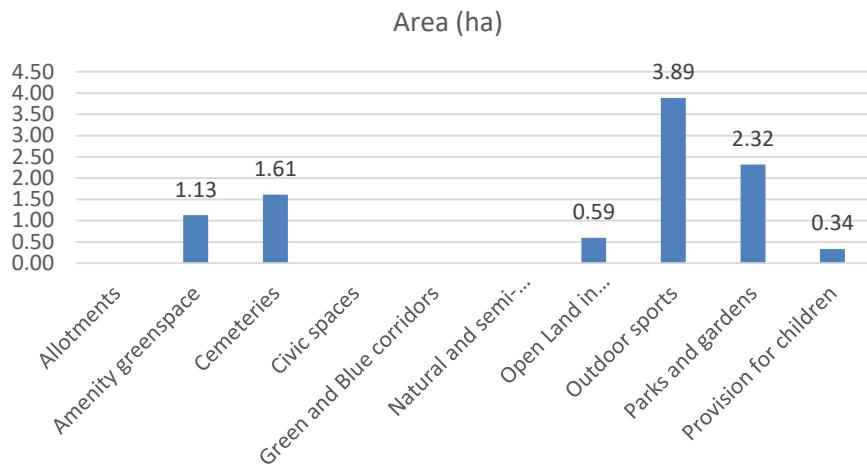

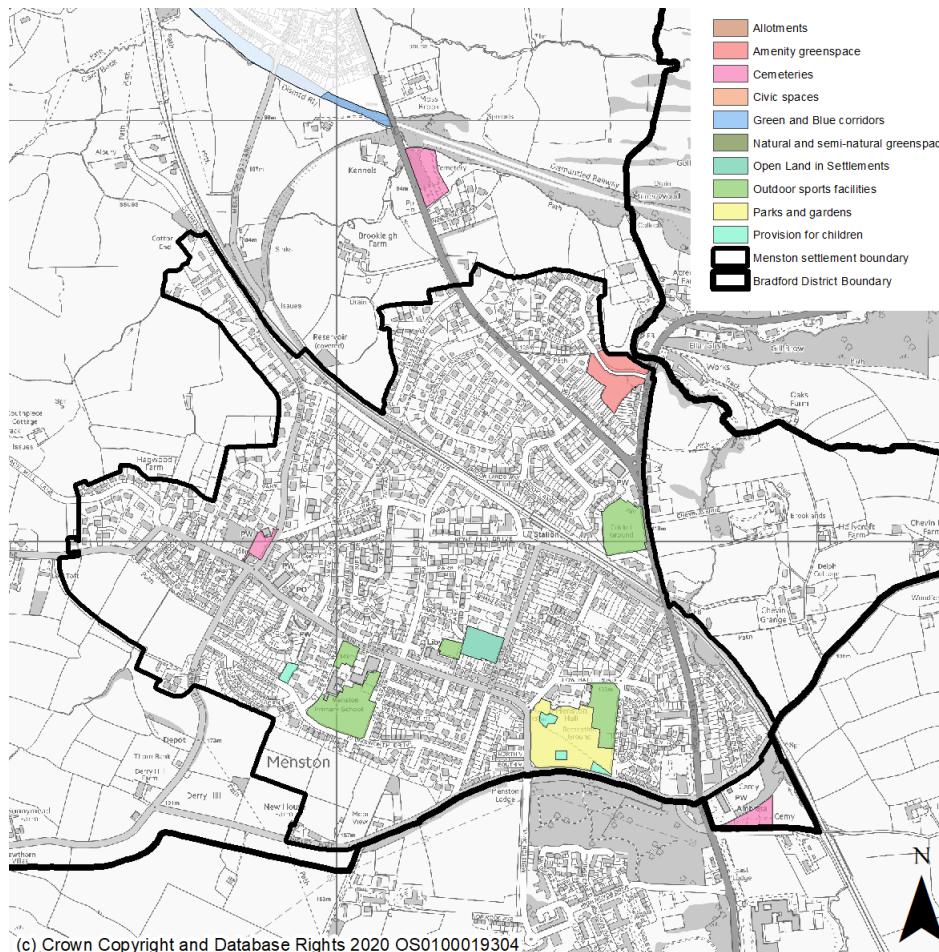

Table 5.48 Summary of provision priorities Menston

Allotments	Amenity Greenspace	Cemeteries	Civic Spaces	Green & Blue Corridors	Natural/Semi-natural Greenspace	Open Land in Settlements	Outdoor Sports	Parks and Gardens	Provision for Children and Young people
HIGH	MODERATE	LOW	N/A	HIGH	HIGH	HIGH	HIGH	HIGH	LOW
-0.87	-1.06	0.52	-0.04	-0.87	-4.37	-1.37	-3.98	-1.62	2 (sites)

5.415 The settlement area of Menston has **15 sites** identified as open space covering an area of **9.87ha**.

5.416 With a population of 4,369, Menston requires 23.64ha of open space to meet the local standards. The figures show that there is a significant deficit in provision with less than half the amount of required open space being available within the settlement area. The data also shows an imbalance between the different typologies of open space that currently exist in the settlement.

5.417 The figures show that the typology with the greatest amount of space is Outdoor Sports, although a large proportion of this is made-up of Menston Primary school playing field. There is also a reasonable level of provision for children in the form of three play areas and a skate park. There are four typologies for which there is no provision within Menston these are Allotments, Civic, Green and Blue Corridors and Natural and Semi-natural Greenspace.

5.418 In terms of the distribution of spaces across the settlement the map shows that there is a reasonable distribution of spaces although the key public spaces such as Menston Park is located in the southeast of the settlement, and the play area sites are also concentrated in the southern half of the settlement. The map shows that there are large residential areas to the north which have limited or no immediate open space provision.

5.419 There are a number of **key sites** within the Menston settlement area including:

- Menston Recreation Ground
- Menston Cricket Ground

5.420 Table 5.48 provides a summary of the provision priorities for the Menston settlement area and the deviation from the standard level of provision required for each typology. This is based on the findings from the typology analysis above. It shows that for eight out of the ten typologies there is a deficiency of space in Menston. Cemeteries and Play areas perform positively against the standards and are considered a lower priority for increased provision, although additional play area space to the north of the settlement would benefit residents and help to ensure better access to facilities.

5.421 Of the typologies with a deficit of provision, Natural and Semi-natural Greenspaces sees the highest deficit and provision of such space should be considered as a high priority where opportunities arise. However, Menston is surrounded by open countryside and this in part provides a substitute for the lack of space within the settlement.

5.422 Other typologies which are a high priority for increased provision include Outdoor Sports space and Parks and Gardens. Although there is some existing provision, the offer for outdoor sports is fairly limited and the location of both types of space is limited to the southern part of the settlement. Additional provision to the north would help to both balance provision levels and the distribution of sites.

5.423 There is also no existing allotment provision in Menston. Consideration should be given to the findings of the open space Needs and Demands assessment along with this audit to understand the implications for identifying a site for allotment space.

5.424 Smaller deficits of Amenity Greenspace and Green and Blue Corridors are also recorded. Additional provision of such space would benefit the settlement and help to contribute to the wider Green Infrastructure of the area.

## 6. Additional Assessment Details

6.1 It is also important to look at a number of other aspects of open space provision including the range of site sizes, the ownership of sites, the public access to sites, the provision of small sites below the audit threshold and to help demonstrate the relationship between areas of poor open space provision and poor health.

### Site size range

6.2 Further assessment of the findings from the audit work relating to the range of site sizes is provided in Table 6.1 below. It is useful to understand the variation in provision of sites of different sizes, to see if there is a dominance of small, medium or large sites.

**Table 6.1 Site sizes**

Site size range	No. sites	No. sites (%)	Area (ha)	Area (%)
<0.2ha	335	19.79	27.98	1
0.2-0.49ha	469	27.70	150.87	5
0.5-0.99ha	319	18.84	226.60	8
1-1.99ha	287	16.95	407.52	15
2 – 4.99ha	183	10.81	557.77	20
5 – 9.99ha	59	3.48	398.20	14
10 – 19.99ha	25	1.48	325.16	12
20 – 49.99ha	13	0.77	374.98	13
50+ha	3	0.18	312.32	11
Totals	1693		2781.41	

6.3 The data shows that nearly a fifth of sites are less than 0.2ha in size, however, these only account for 1% of the total area of open space in the district. These sites mainly fall within the Provision for Children and Young People typology and are made up of small equipped play areas.

6.4 Nearly two thirds of sites are between 0.2 and 2ha and account for 29% of the total area of open space. This demonstrates that there is a dominance of smaller sized areas of open space in the District.

6.5 14% of sites are of a medium size between 2ha and 10ha and account for a third of the total of open space. Those sites of a larger size (10-50ha) represent just 2% of the total number of sites but account for a quarter of the total area of open space.

6.6 Finally, there are three sites in the district which are over 50ha in size. This represents less than 1% of the total number of sites but accounts for 11% of the total area. These sites include St Ives Country Park Estate and two large Golf Courses.

### Ownership

6.7 The audit work has identified open space sites which are in public, private or mixed ownership. Table 6.2 provides a breakdown by total area and number of sites in each ownership category.

**Table 6.2 Ownership Summary**

Ownership	No. sites	No. sites (%)	Area (ha)	Area (%)
Public (Council)	987	58	1427.64	51
Mixed	114	7	458.09	16
Private	592	35	895.67	32
Total	1693		2781.41	

6.8 The data shows that just over half the sites and area of open space identified in the audit is within public ownership (i.e. owned by the Council or other public body). Around 10% is within mixed ownership (i.e. sites where the Council own part of the area and the remaining area is within private ownership). The advantages of publically owned sites is that there is a greater level of control in terms of protecting them and also in terms of providing access to them.

6.9 The remaining sites (around a third) are within private ownership. Some of these sites have public or restricted access whereas some are private with no public access. Many of these private sites are within the Open Land in Settlements and Natural and Semi-natural Greenspace typologies, and are more likely to be sites which offer a visual amenity type of open space rather than being of recreational use.

## Access

6.10 Not all of the open space sites included in the audit have open access to the general public. There are some which are mainly privately owned but offer limited or de facto access. Some sites have restricted access where membership is required in order to use facilities, or are limited for use by groups of residents, employees or school pupils. There are also sites under this category where payment is required to access them. In addition, as noted above, there are some privately own sites that are not open to the public at all.

6.11 Table 6.3 below provides a summary of the proportion of sites that have public access.

**Table 6.3 Site access overview**

Type of access	No. sites	No. sites (%)	Area (ha)	Area (%)
Public access (unrestricted)	630	37	854.05	31
Limited / de facto access	213	13	441.88	16
Restricted access (membership is required or the site limited to specific opening hours)	478	28	1058.42	38
Private site (no public access)	372	22	427.06	15

6.12 The data shows that 37% of the total number of sites (31% of the area) that have full public access, meaning that residents and visitors can freely use these spaces for recreational activities. A further 13% have limited or de facto access, which in most cases means that people can again use these sites freely without specific permission.

6.13 28% of sites have restricted access, with the majority of these being either school playing field sites or playing pitches/sports clubs which require membership or some form of permission to access them. However, the majority of these sites are still accessible in some form and play an important role in the portfolio of open space sites available.

6.14 However, nearly a quarter of sites (22%) are privately owned sites where public access is prohibited. Many of these sites perform an amenity function and are important in the

setting and character of settlements, provide important habitats for wildlife and support biodiversity.

### Provision outside the District

6.15 It is important to recognise that there are a range of other destination open spaces in neighbouring local authority areas that are visited by people from the Bradford District. These sites provide additional provision and often play a more strategic role on a regional scale. Those parts of the District which are located directly adjacent to neighbouring authority areas will benefit from access to open space in those areas and in some instances this provision may provide an alternative to that in Bradford.

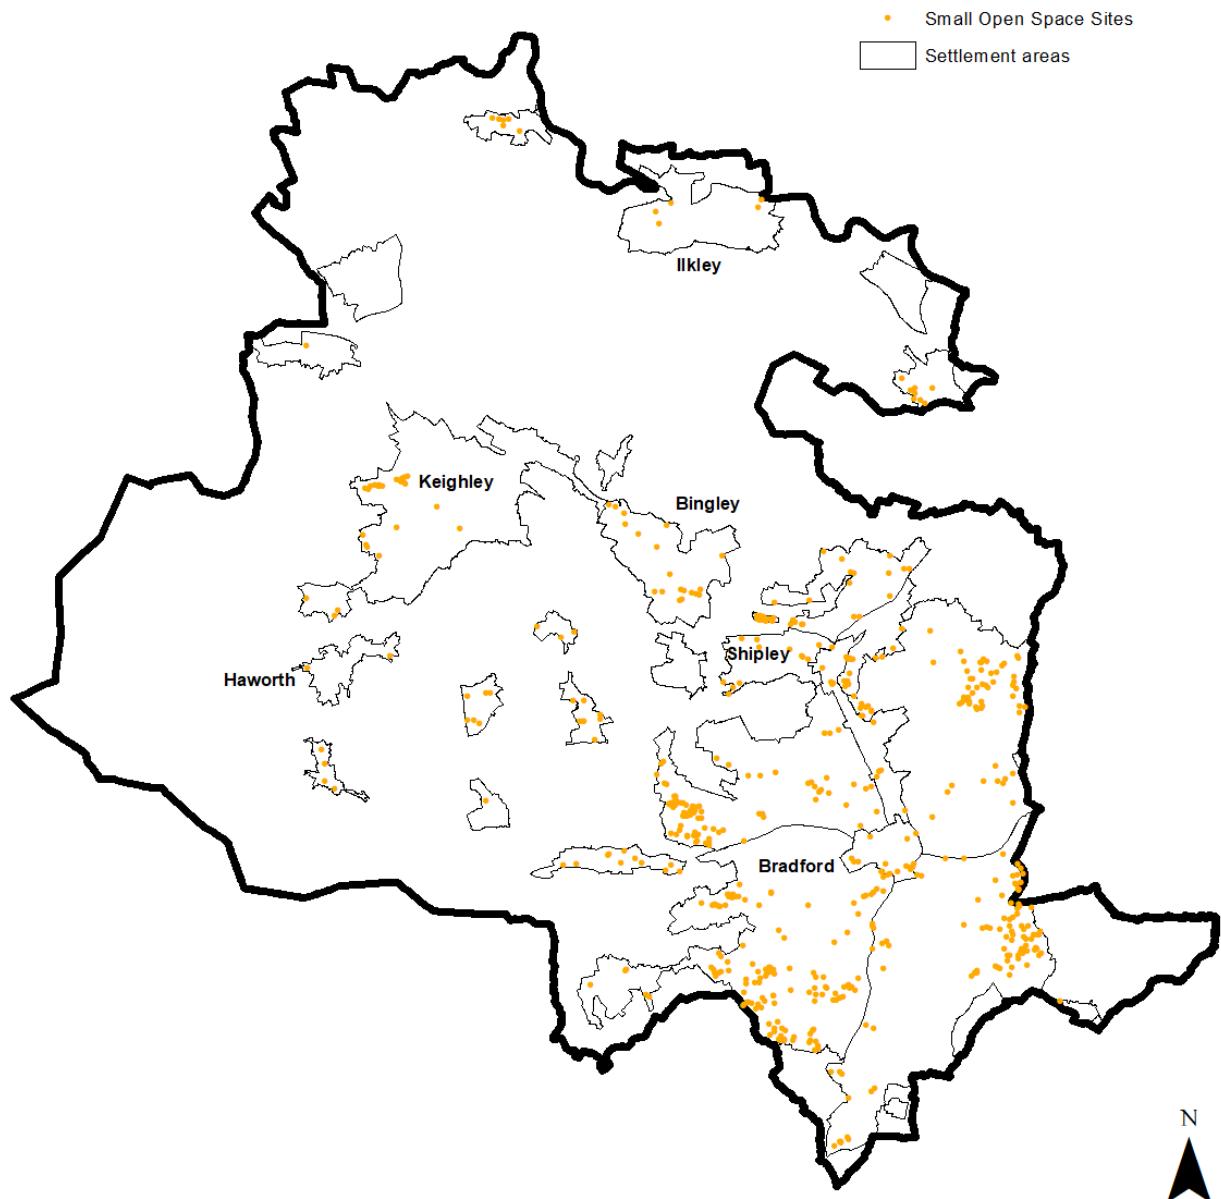

6.16 Table 6.4 provides a summary of some of the key spaces in neighbouring authorities which may be accessed by Bradford District residents.

**Table 6.4 Strategic open space sites outside of the District**

Site	Location	Typology	Catchment area in Bradford
Shibden Park	Halifax, Calderdale	Parks and Gardens	Queensbury, Bradford South West
Ogden Reservoir	Calderdale	Natural and Semi-natural Greenspace	Denholme, Thornton, Queensbury, Oxenhope, Bradford North West, Bradford South West
Aireville Park	Skipton, Craven	Parks and Gardens	Silsden, Steeton, Addingham
Golden Arce Park	Leeds	Parks and Gardens	All settlements
Roundhay Park	Leeds	Parks and Gardens	All settlements
Otley Chevin	Otley, Leeds	Natural and Semi-natural Greenspace	Burley, Menston, Baildon, Bradford North East
Yeadon Tarn	Yeadon, Leeds	Natural and Semi-natural Greenspace	Burley, Menston, Baildon, Bradford North East
Wyroller Country Park	Trawden, Pendle	Country Park / Natural and Semi-natural Greenspace	Haworth, Oakworth, Oxenhope, Keighley

### Small sites

6.17 As part of the audit work small sites below the site size threshold were also mapped to help provide a more complete picture of the provision of open space in the District. The importance of small areas of amenity space within the built environment is acknowledged by Natural England and Public Health England, and so it is useful to understand the provision and distribution of such spaces in the Bradford District and how they supplement the wider provision of open space.

(c) Crown Copyright and Database Rights 2020 OS0100019304

#### Map 6.1 Distribution of small open space sites

6.18 Map 6.1 provides an overview of the provision and distribution of small sites within each settlement area. It shows that there are concentrations of small sites within the suburban residential areas of Bradford. These areas often compromise of post-war housing estates where areas of amenity space and landscaping were incorporated into lower density developments in order to create more attractive environments.

6.19 The map also shows that there are some small open space sites within the principal towns and on the edges of some of the villages. These sites often exist as part of the provision of new housing development and in response to the development plan policy requirements of providing new open space.

**Table 6.5 Small sites by settlement**

Settlement	Number sites	Area (ha)
<b>City of Bradford, Shipley and Lower Baildon</b>		
Bradford NE	71	7.29
Bradford NW	90	7.20
Bradford SE	99	9.59
Bradford SW	123	11.07
Bradford City Centre	14	1.76
Shipley Canal Road Corridor	0	0
Shipley	31	2.61
<b>Sub-area</b>	<b>428</b>	<b>39.52</b>
<b>Airedale</b>		
Baildon	29	2.57
Bingley	19	2.02
Cottingley	0	0
East Morton	0	0
Keighley	22	1.65
Silsden	0	0
Steeton	1	0.11
<b>Sub-area</b>	<b>71</b>	<b>6.35</b>
<b>Wharfedale</b>		
Addingham	6	0.46
Burley-in-Wharfedale	0	0
Ilkley	5	0.81
Menston	8	0.95
<b>Sub-area</b>	<b>19</b>	<b>2.22</b>
<b>South Pennine Towns and Villages</b>		
Cullingworth	6	0.60
Denholme	1	0.14
Harden	3	0.27
Haworth	2	0.23
Oakworth	3	0.29
Oxenhope	4	0.54
Queensbury	5	0.44
Thornton	11	1.03
Wilsden	8	0.86
<b>Sub-area</b>	<b>43</b>	<b>4.40</b>

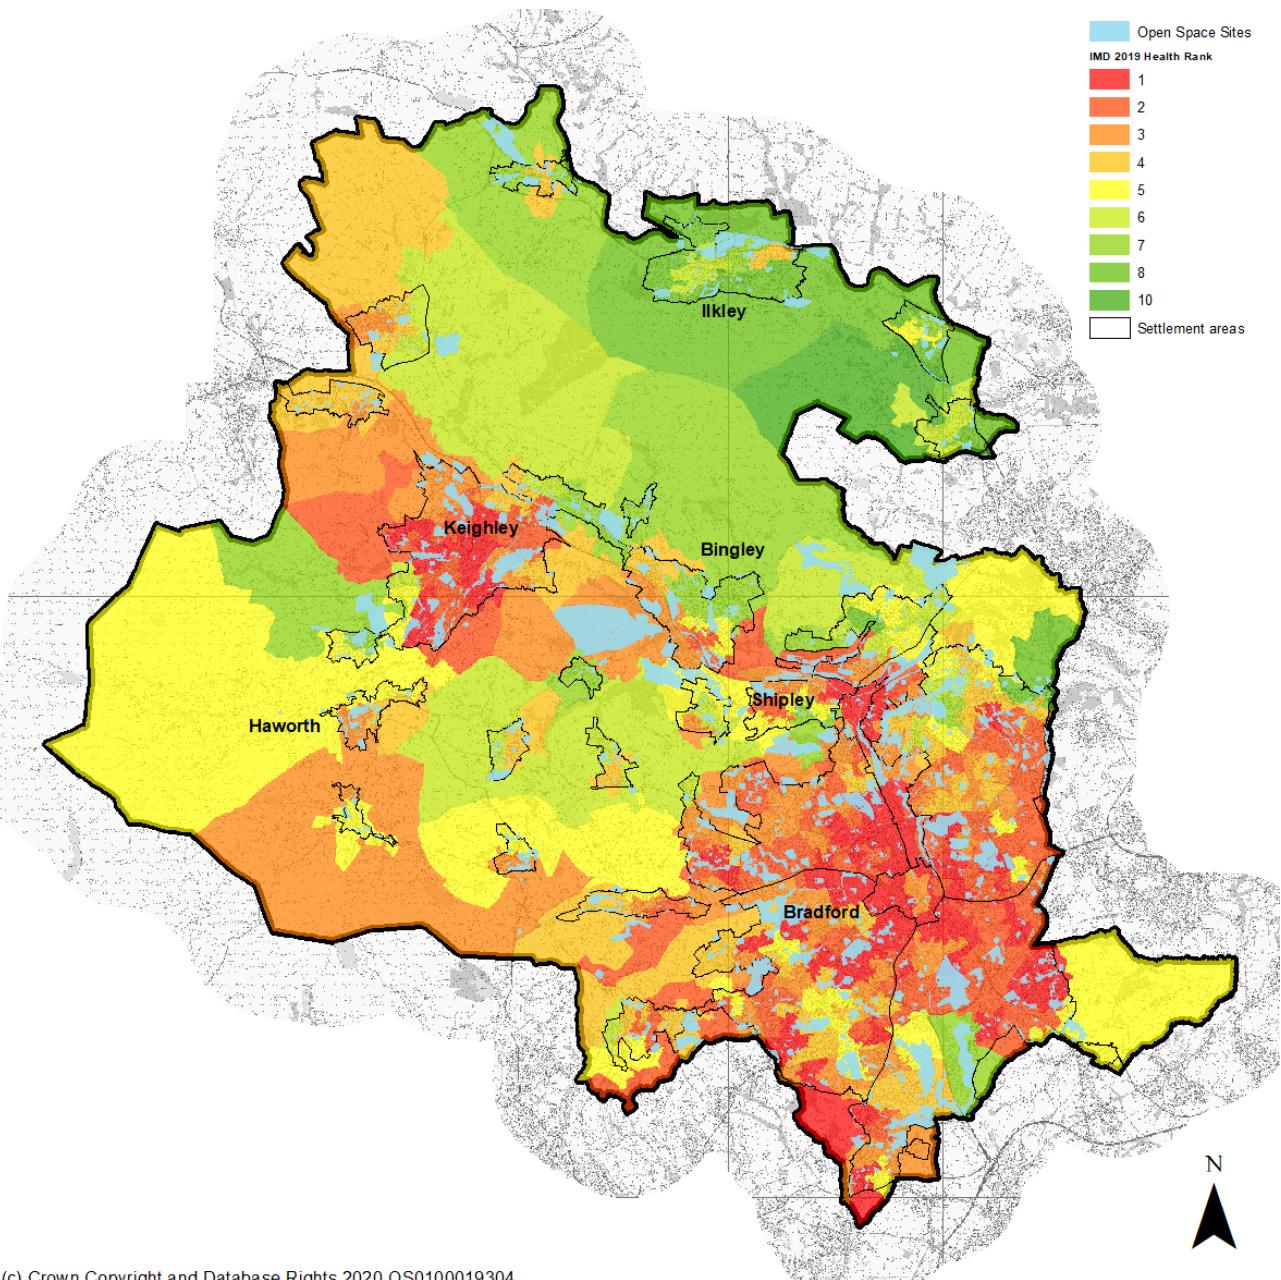

6.20 Table 6.5 provides a breakdown of the number and amount of small open space sites by settlement. It shows that the largest number and amount of small open space is within the Bradford Urban area accounting for 39.52ha of space.

6.21 Provision in other areas of the District is comparable with the size of each settlement, however, there are some settlements where no small sites have been identified, including Cottingley, East Morton, Silsden and Burley.

6.22 These small open space sites play an important role in those areas where there are notable deficiencies of open space by providing additional areas of amenity to large built-up areas.

## **Index of Multiple Deprivation Health Indices and areas of poor open space provision**

6.23 The findings of the open space audit in conjunction with the health indices from the Index of Multiple Deprivation can be used to further highlight the priorities for improved open space provision. It is well documented that one of the contributing factors to poor health is the lack of access to good quality green spaces.

(c) Crown Copyright and Database Rights 2020 OS0100019304

**Map 6.2 Open Space Distribution and areas of health deprivation from the 2019 IMD**

6.24 Map 6.2 shows the health rank from the 2019 IMD overlaid with the open space sites (in blue) from the audit. It clearly demonstrates that there are certain parts of the District, particularly with the urban areas of the City of Bradford and also parts of Keighley, where there are areas of high health deprivation (i.e. a large proportion of the residents in those areas suffer from poor health) and poor levels of open space provision.

6.25 As previously noted this issue is particularly acute in Bradford City Centre, central Keighley and parts of North West and South East Bradford. As part of the regeneration and renewal of some of these areas and also as part of the policy response in the Local Plan, consideration needs to be given to the opportunities to increase provision in these areas and where this is not possible look at ways of improving access to existing sites.

## 7. Recommendation and Actions

7.1 Section 5 provides the analysis of the results and shows the performance against the locally derived standards by typology and settlement. The area profiles should be used to identify the specific requirements for each area. Table 7.1 provides of summary of the key recommendations and associated actions for each settlement.

**Table 7.1 Summary of Recommendations**

Settlement	Summary and Recommendations
<b>City of Bradford, Shipley and Lower Baildon</b>	
Bradford NE	<ul style="list-style-type: none"> <li>• Look to increase provision in Fagley and the central area of Undercliffe and Ecceleshill.</li> <li>• High levels of deficiency in a number of typologies. Key typologies for increased provision are: Parks, Provision for Children and Natural and Semi-natural Greenspace.</li> </ul>
Bradford NW	<ul style="list-style-type: none"> <li>• Look to increase provision in Girlington, and parts of Manningham and Heaton (East) where practical.</li> <li>• High levels of deficiency in a number of typologies. Key typologies for increased provision are: Parks, Provision for Children and Allotments.</li> </ul>
Bradford SE	<ul style="list-style-type: none"> <li>• Look to increase provision in parts of Bierley and also Low Moor and Wyke.</li> <li>• High levels of deficiency in just two typologies and these should be the focused for increased provision: Parks, Green and Blue Corridors, and Allotments.</li> </ul>
Bradford SW	<ul style="list-style-type: none"> <li>• Look to increase provision in parts of Little Horton, Royds and Wibsey.</li> <li>• High levels of deficiency in a number of typologies. Key typologies for increased provision are: Natural and Semi-natural Greenspace, Outdoor Sports, Parks and Provision for Children.</li> </ul>
Bradford City Centre	<ul style="list-style-type: none"> <li>• A number of typologies show deficits in provision. Typologies which are a high priority for increased provision are: Parks, Outdoor Sports, Provision for Children.</li> <li>• Look at regeneration opportunities to increase provision e.g. new market site, urban village/top of town.</li> <li>• Look at innovative approaches to 'green' the city centre.</li> </ul>
Shipley Canal Road Corridor	<ul style="list-style-type: none"> <li>• Good levels of provision in this area.</li> <li>• Typologies for increased provision are: Parks.</li> </ul>
Shipley	<ul style="list-style-type: none"> <li>• Moderately good levels of provision in this area with deficiencies in four typologies.</li> <li>• Key typologies for increased provision are: Parks, Amenity Greenspace</li> </ul>
<b>Airedale</b>	
Baildon	<ul style="list-style-type: none"> <li>• Good levels of provision of certain typologies in this area.</li> <li>• Look to increase provision in the northern part of the settlement (north of West Lane).</li> <li>• High levels of deficiency in a three typologies. Key typologies for increased provision are: Parks, Cemeteries and Allotments.</li> </ul>
Bingley	<ul style="list-style-type: none"> <li>• Good levels of provision of nearly all typologies in this area.</li> <li>• Deficiency of Amenity Greenspace. Look to increase provision of this type of space.</li> </ul>
Cottingley	<ul style="list-style-type: none"> <li>• Good distribution of sites throughout the settlement.</li> <li>• Deficits of a number of typologies. Look to increase provision of Amenity Greenspace.</li> </ul>

Settlement	Summary and Recommendations
East Morton	<ul style="list-style-type: none"> <li>• Good levels of provision of most typologies with a good distribution of sites.</li> <li>• Look at the potential to provide some form of Park space within the settlement.</li> </ul>
Keighley	<ul style="list-style-type: none"> <li>• Good levels of provision of most typologies. Some disparities between the distribution of spaces in the different localities within the settlement.</li> <li>• Look to increase provision in the Central Keighley area where opportunities arise.</li> <li>• Limited number of typologies with deficiencies. Most typologies are well catered for and perform well against the standards.</li> <li>• Any additional provision should focus on Amenity Greenspace and/or Parks and Gardens.</li> </ul>
Silsden	<ul style="list-style-type: none"> <li>• Notable deficits of certain types of open space. But the existing provision is well distributed throughout the settlement.</li> <li>• Look to increase provision of Natural and Semi-natural Greenspace and Parks and Gardens.</li> </ul>
Steeton	<ul style="list-style-type: none"> <li>• Reasonably good distribution of spaces throughout the settlement. Notable deficiencies in certain types of open space.</li> <li>• High priorities for increased provision are Parks and Gardens, and Outdoor Sports sites.</li> </ul>
<b>Wharfedale</b>	
Addingham	<ul style="list-style-type: none"> <li>• Good levels of provision in most typologies and good performance against the standards. The sites are also well dispersed throughout the settlement.</li> <li>• The focus for any additional provision should be for Parks and Gardens.</li> </ul>
Burley-in-Wharfedale	<ul style="list-style-type: none"> <li>• Good provision of some types of open space, but equally notable deficits in others. The distribution of spaces is also unbalanced with the western part of the settlement seeing a lack of provision.</li> <li>• Additional Natural and Semi-natural Greenspace would be beneficial and an additional park space to the western part of the settlement would also help to rebalance the provision.</li> </ul>
Ilkley	<ul style="list-style-type: none"> <li>• There is a good level of provision of most types of open space and these perform well against the standards. The distribution of sites sees concentrations of open space in the central and northern areas.</li> <li>• Look for opportunities to increase provision at the western and eastern extents of the settlement.</li> <li>• There is a notable deficit of Provision for Children sites and also Parks and Gardens. Addition children's play facilities should be a high priority for Ilkley.</li> </ul>
Menston	<ul style="list-style-type: none"> <li>• There are significant deficits of a number of typologies and poor performance against the standards. The distribution of sites is also poor with a concentration of spaces to the south of settlement.</li> <li>• Look to identify opportunities for increased provision in the north of the settlement.</li> <li>• Typologies which are a high priority for increased provision are: Allotments, Outdoor Sports, and Parks and Gardens.</li> </ul>
<b>South Pennine Towns and Villages</b>	
Cullingworth	<ul style="list-style-type: none"> <li>• Good levels of provision of certain typologies, particularly Natural and Semi-natural Greenspace. Also good distribution of spaces.</li> <li>• Typologies with a notable deficit and therefore high priority for increased provision are: Allotments, Amenity Greenspace, Parks and Gardens.</li> </ul>

Settlement	Summary and Recommendations
Denholme	<ul style="list-style-type: none"> <li>Reasonable levels of provision of some typologies and good distribution of spaces.</li> <li>Typologies with a notable deficit and therefore high priority for increased provision are: Outdoor Sports, Amenity Greenspace.</li> </ul>
Harden	<ul style="list-style-type: none"> <li>Slight deficiencies of certain typologies and an uneven distribution of spaces, but still with reasonable levels of access.</li> <li>Typologies with a deficit and therefore high priority for increased provision are: Allotments, Natural and Semi-natural Greenspace.</li> </ul>
Haworth	<ul style="list-style-type: none"> <li>There is a reasonable level open space in Haworth but with some imbalances between types of spaces. Good distribution of sites throughout the settlement.</li> <li>Typologies with a deficit and therefore high priority for increased provision are: Outdoor Sports</li> </ul>
Oakworth	<ul style="list-style-type: none"> <li>Oakworth sees good levels of provision of most types of space with a good range of provision throughout the settlement.</li> <li>The typology with the most notable deficiency and priority for increased provision is: Outdoor Sports.</li> </ul>
Oxenhope	<ul style="list-style-type: none"> <li>Reasonably good levels of most types of open space and a good distribution of sites.</li> <li>Slight deficits of a number of spaces. Key typologies for increased provision include: Outdoor Sports, Parks and Gardens.</li> </ul>
Queensbury	<ul style="list-style-type: none"> <li>Notable imbalance of different types of open space with some significant deficiencies in certain typologies. The distribution of sites is fairly even but with some concentrations around the centre.</li> <li>Typologies with a deficit and therefore high priority for increased provision are: Natural and Semi-natural Greenspace, Amenity Greenspace, Allotments, and Provision for Children.</li> </ul>
Thornton	<ul style="list-style-type: none"> <li>A mixed level of provision with some imbalances between different typologies. Concentrations of sites to the west and north. Limited provision with the central area.</li> <li>Typologies with a deficit and therefore high priority for increased provision are: Parks and Gardens, Allotments and Provision for Children.</li> </ul>
Wilsden	<ul style="list-style-type: none"> <li>There are notable deficits of most types of open space in Wilsden and the general overall level of provision is poor compared to the standards.</li> <li>Limited number of spaces to the north and south areas of the settlement.</li> <li>Typologies with a deficit and therefore high priority for increased provision are: Parks and Gardens, Outdoor Sports, Provision for Children and Allotments.</li> </ul>

7.2 A number of other recommendations for further work are acknowledged below, which will help to further the understanding of open space requirements in the District, these include:

7.3 Look to undertake an assessment of the quality of the key publically accessible open spaces to identify where improvements/enhancements need to be made to existing facilities. This may be linked with other work the Council is undertaking such as through the Playable Spaces Strategy and Playing Pitch Strategy.

7.4 Look to undertake modelling to understand the implications of future planned growth on levels of provision in each area and the possible resulting deficiencies in open space.

Therefore, helping to narrow down priorities for new provision/enhancements matched to the areas where growth is planned and also identifying possible solutions/options.

- 7.5 Look to translate the strategic settlement level standards into a per dwelling requirement/tariff for developers.

## 8. Conclusion

- 8.1 Open Space plays an important role in the daily lives of all our communities. It is an incredibly important asset to the District and can perform a variety of functions including: sport, recreation, leisure, civic occasions, community events and nature conservation. Through participation in such activities residents and visitors can reap the benefits from good open space provision. These include: improved physical and mental health and well-being, connection with nature, sustainable food production, better air quality, improved biodiversity, and the resulting mitigation it provides against the effects of climate change.
- 8.2 This Open Space Audit has been prepared to provide a robust, credible and up-to-date evidence base to support the development of the Bradford Local Plan. It helps to identify open space sites that should be protected from development and also provides a new set of standards for open space provision in the future.
- 8.3 The findings of the audit have shown that there are notable differences between the provision of open space in each of the settlement areas of the District. In terms of the performance against the quantity standards, there are a number of settlement areas which have considerable amounts of open space relative to the size of their populations and the residents of these areas benefit from these good levels of provision. These tend to be the principal towns or small settlements. Conversely there are a number of areas which have poorer levels of provision and have a notable deficit of certain types of spaces when compared to the standards. These tend to be the large urban areas of Bradford, where blocks of high density terraced housing leave little room for the provision of open spaces. These areas often also suffer from higher levels of deprivation and poor health.
- 8.4 The audit has provided a number of recommendations as to where increased provision of open space should be a high priority and suggested the types of space that should be considered. This information will be useful for both the allocation of sites in the Local Plan and also as part of the Development Management process when applicants are considering the type of open space to be provided as part of new developments.
- 8.5 The assessment also shows that not only do some areas suffer from poor levels of provision of open space, they also have reduced access to some types of spaces as the existing provision is poorly distributed throughout the settlement area. Again the recommendations provide suggestions as to the areas that should be targeted in terms of better provision.
- 8.6 This open space audit should be read in conjunction with the Open Space Needs and Demands Assessment, the Playing Pitch Strategy and the Playable Spaces Strategy to understand the full implications in terms of priorities for additional open space provision.

## 9. Appendices

### Appendix 1

#### Setting Quantity Standards

In order to set the open space Quantity standards for the District it is useful to look at and compare neighbouring authorities' requirements as part of a benchmarking exercise. Table 9.1 below sets out the quantity standards for each open space typology in each neighbouring authority area. It also provides the average provision rate (in ha per 1,000 population) for Bradford taken from audit.

**Table 9.1 Quantity Standards Benchmarking**

Open Space Typology	Local Authority	Standard (ha per 1,000 population)	Bradford average provision rate (ha per 1,000 population)
Allotments	Calderdale	No standard specified	0.17
	Craven	0.3	
	Harrogate	0.4	
	Kirklees	0.5 (per 1,000 households)	
	Leeds	0.24	
	Pendle	0.38	
Amenity Greenspace	Calderdale	No standard specified	0.40
	Craven	0.41	
	Harrogate	1.8	
	Kirklees	0.30	
	Leeds	0.45	
	Pendle	0.40	
Cemeteries	Calderdale	0.286	0.25
	Craven	0.5	
	Harrogate	0.5	
	Kirklees	No standard specified	
	Leeds	No standard specified	
	Pendle	0.22	
Civic	Calderdale	0.021	0.01
	Craven	0.5	
	Harrogate	No standard specified	
	Kirklees	No standard specified	
	Leeds	0.41	
	Pendle	0.02	
Green and Blue corridors	Calderdale	No standard specified	0.17
	Craven	No standard specified	
	Harrogate	No standard specified	
	Kirklees	No standard specified	
	Leeds	No standard specified	
	Pendle	0.84	
Natural and semi-natural greenspace	Calderdale	No standard specified	0.91
	Craven	No standard specified	
	Harrogate	2.7	

**Table 9.1 Quantity Standards Benchmarking**

Open Space Typology	Local Authority	Standard (ha per 1,000 population)	Bradford average provision rate (ha per 1,000 population)
Open land in settlements	Kirklees	2.0	0.40
	Leeds	0.7 (main urban area and major settlements) 2.0 in other areas	
	Pendle	4.54	
	Calderdale	Not applicable	
	Craven	Not applicable	
	Harrogate	Not applicable	
Outdoor sports facilities	Kirklees	Not applicable	2.27
	Leeds	Not applicable	
	Pendle	Not applicable	
	Calderdale	1.73	
	Craven	No standard specified	
	Harrogate	1.63	
Parks and gardens	Kirklees	No standard specified	0.89
	Leeds	1.2 (excludes education provision)	
	Pendle	2.89	
	Calderdale	No standard specified	
	Craven	0.61	
	Harrogate	0.08	
Provision for children and young people	Kirklees	0.8	0.03 (or 0.38 sites per 1,000 pop)
	Leeds	1.0	
	Pendle	0.72	
	Calderdale	No standard specified	
	Craven	0.3	
	Harrogate	0.1	

Table 9.2 sets out the national standards, average provision rate for Bradford taken from the audit work, and the findings from the Open Space Needs and Demands assessment which provides an indication of whether there is a perceived lack of space by typology. These datasets are brought together to establish a locally derived standard for the Bradford District (stated as a ha/1,000 population figure) by typology along with an explanatory comment

Table 9.2 Setting Open Space Quantity Standards for Bradford District

Typology	Nationally set quantity standards (Fields in Trust, Allotment Association) (ha/1,000 population)	Average provision (ha/1,000 population) in Bradford District (based on findings of the 2020 audit)	Open Space Needs and Demands Assessment – type of space thought to be lacking	Bradford District Quantity Standard (ha/1,000 population)	Comment / Explanation
Allotments	0.23	0.17	10% of respondents thought there as a lack of allotments	0.20	The standard is slightly higher than the average provision to show ambition and reflect the findings of the needs assessment but realistic against the national standard and takes account of the needs and demands assessment findings on lack of provision.
Amenity greenspace	0.60	0.40	10.2% of respondents thought there as a lack of amenity greenspace	0.50	The standard is slightly higher than the average provision to show ambition and reflect the findings of the needs assessment but realistic against the national standard.
Cemeteries	No national standard	0.25	1.6% of respondents thought there as a lack of cemeteries	0.25	No national standard. Needs assessment suggestion provision levels are reasonable. Standard reflects average provision rate.
Civic spaces	No national standard	0.01	4.3% of respondents thought there as a lack of civic spaces	0.01	No national standard. Needs assessment suggestion provision levels are reasonable. Standard reflects average provision rate.

Table 9.2 Setting Open Space Quantity Standards for Bradford District

Typology	Nationally set quantity standards (Fields in Trust, Allotment Association) (ha/1,000 population)	Average provision (ha/1,000 population) in Bradford District (based on findings of the 2020 audit)	Open Space Needs and Demands Assessment – type of space thought to be lacking	Bradford District Quantity Standard (ha/1,000 population)	Comment / Explanation
Green and Blue corridors	No national standard	0.17	13.9% of respondents thought there was a lack of outdoor networks	0.20	The standard is slightly higher than the average provision to show ambition and reflect the findings of the needs assessment.
Natural and semi-natural greenspace	1.80	0.91	17.3% of respondents thought there was a lack of nature reserves, common or woodland	1.00	The standard is slightly higher than the average provision to show ambition and reflect the findings of the needs assessment but realistic against the national standard.
Open land in settlements	No national standard	0.40	Not applicable	0.45	Bradford specific typology. Standard reflects the average provision.
Outdoor sports facilities	1.60	2.27	Not covered in the survey	1.80	The standard is lower than the average provision but higher than the national standard. The average provision figure includes large golf courses which distorts the provision levels of this typology.
Parks and gardens	0.80	0.89	17.2% of respondents thought there was a lack of local park or garden	0.90	The standard is higher than both the national and average provision, and reflects the findings of the needs assessment.

Table 9.2 Setting Open Space Quantity Standards for Bradford District

Typology	Nationally set quantity standards (Fields in Trust, Allotment Association) (ha/1,000 population)	Average provision (ha/1,000 population) in Bradford District (based on findings of the 2020 audit)	Open Space Needs and Demands Assessment – type of space thought to be lacking	Bradford District Quantity Standard (ha/1,000 population)	Comment / Explanation
Provision for children and young people	0.25	0.03 (or 0.38 site per 1,000 pop)	20.8% of respondents thought there was a lack of natural play areas 12.0% of respondents thought there was a lack of equipped play areas 17.6% of respondents thought there was a lack of teenage provision	0.4 sites per 1,000 population	The standard represents a slight increase compared to the average provision rates. It also reflects the findings of the needs assessment.

Similarly to setting local quantity standards, it is also important to set out local accessibility standards. Again a benchmarking exercise has been carried out to consider the standards set by neighbouring authorities. These are set out in Table 9.3 below:

**Table 9.3 Accessibility Standards Benchmarking**

<b>Open Space Typology</b>	<b>Local Authority</b>	<b>Accessibility standard</b>
Allotments	Calderdale	All settlement areas within 400m of a site (0.04ha-1ha) and 600m of a site (1.00ha-3.00ha) and 1200m of a site greater than 3ha
	Craven	400m
	Harrogate	1,000m
	Kirklees	15 minutes walk (720 m)
	Leeds	960m
	Pendle	800m (10 minute walk)
Amenity Greenspace	Calderdale	All settlement areas within 400m of a site (0.04ha-1ha) and 600m of a site (1.00ha-3.00ha) and 1200m of a site greater than 3ha
	Craven	480m
	Harrogate	1,000m
	Kirklees	10 minutes walk (480m)
	Leeds	480m
	Pendle	480m (6 minute walk)
Cemeteries	Calderdale	Accessibility is not a directly relevant measure
	Craven	400m
	Harrogate	3,000m
	Kirklees	No standard set
	Leeds	No standard set
	Pendle	No standard set
Civic	Calderdale	Accessibility is not a directly relevant measure
	Craven	400m
	Harrogate	No standard set
	Kirklees	No standard set
	Leeds	720m (City centre open space)
	Pendle	1,600m (20 minute walk)
Green and Blue corridors	Calderdale	No standard set
	Craven	No standard set
	Harrogate	No standard set
	Kirklees	No standard set
	Leeds	No standard set
	Pendle	720m (9 minute walk)
Natural and semi-natural greenspace	Calderdale	All settlement areas within 400m of a site (0.04ha-1ha) and 600m of a site (1.00ha-3.00ha) and 1200m of a site greater than 3ha
	Craven	No standard set
	Harrogate	3,000m
	Kirklees	15 minute walk (720m)
	Leeds	720m 2km from a site of 2ha
	Pendle	720m (9 minute walk)

**Table 9.3 Accessibility Standards Benchmarking**

Open Space Typology	Local Authority	Accessibility standard
Open land in settlements	Calderdale	Not applicable
	Craven	Not applicable
	Harrogate	Not applicable
	Kirklees	Not applicable
	Leeds	Not applicable
	Pendle	Not applicable
Outdoor sports facilities	Calderdale	(Teams to have access to appropriate site at relevant time)
	Craven	No standard set
	Harrogate	3,000m
	Kirklees	Not considered in study
	Leeds	720m – tennis courts 3.2km bowling greens and grass pitches 6.4km athletics tracks and synthetic pitches
	Pendle	1,200m (15 minute walk)
Parks and gardens	Calderdale	All settlement areas within 400m of small local open space (0.04ha-1ha) and 600m of local park (1.00ha-3.00ha) and 1200m of Borough park (greater than 3ha)
	Craven	710m
	Harrogate	1,000m
	Kirklees	15-minute walk (720m) and/or 30-minute travel time to a major park.
	Leeds	720m
	Pendle	720m (9 minute walk)
Provision for children and young people	Calderdale	All settlement areas within 240m (5min walk) of a LEAP and 600m (15min walk) of a NEAP
	Craven	LAPs (100m), LEAPs (400m), NEAPs (1,000m) Youth provision (700m)
	Harrogate	1,000m
	Kirklees	15 minutes walk (720m)
	Leeds	720m
	Pendle	400m (5 minute walk)

\*N.B. Different authorities use different distance/time calculations.

Table 9.4 sets out the national open space accessibility standards, the previous Bradford accessibility standards from the adopted Core Strategy and the findings from the Open Space Needs and Demands assessment which provides details on how far people are willing to travel to access certain types of open space. These datasets have been brought together to establish locally derived open space accessibility standards for each typology for the Bradford District. An explanatory comment is included to provide the justification for each standard.

Table 9.4 Setting Open Space Accessibility Standards for Bradford District

Typology	National Standard (Fields in Trust)	Bradford Core Strategy Appendix 9 Standards	Needs and Demands assessment findings	Bradford Accessibility Standard	Comment / Explanation
Allotments	No national standard	120m (1-minute walk) of a site up to 0.66ha and/or 1,200m (15-minute walk) of a site between 0.66ha and 1ha and/or 900m (11-minute walk) of a site between 1ha and 10+ha	57.8% willing to walk up to 10 minutes (800m) 55.9% willing to walk up to 15 minutes (1,200m)	800m	There is no nationally prescribed standards for accessibility to allotments. Using the findings of the Needs and Demands assessment which indicates nearly 60% of respondents are willing to walk up to 10 minutes to access allotment sites and also reflecting on the standards in neighbouring authorities, the local standard is set at 800m/10-minute walk. This also sits within the range of the previous Core Strategy standards.
Amenity greenspace	480m (6-minute walk)	120m (1-minute walk) of a site up to 0.66ha and/or 1,200m (15-minute walk) of a site between 0.66ha and 1ha and/or 900m (11-minute walk) of a site between 1ha and 10+ha	60.6% willing to walk up to 15 minutes (1,200m).	480m	National standard recommended. Most other local authorities have adopted this standard and it would capture a greater number of the population willing to walk a lesser distance than identified in the needs and demands assessment.
Cemeteries	No national standard	No accessibility standard identified.	55.7% willing to walk up to 15 minutes (1,200m)	1,200m	There is no nationally prescribed standards for accessibility to cemetery space. Using the findings of the Needs and Demand assessment and reflecting on the standards of neighbouring authorities, the local standard is set at 1,200m/15-minute walk. It should also be noted that the strategic nature of

Table 9.4 Setting Open Space Accessibility Standards for Bradford District

Typology	National Standard (Fields in Trust)	Bradford Core Strategy Appendix 9 Standards	Needs and Demands assessment findings	Bradford Accessibility Standard	Comment / Explanation
					cemetery provision means that there will not always be a cemetery site in every settlement and therefore the standards may be difficult to meet.
Civic spaces	No national standard	No accessibility standard identified.	18.5% willing to walk and 44.2% willing to drive up to 30 minutes (2,400m).	1,600m	There are no nationally prescribed standards for the accessibility of civic spaces. The nature of these spaces is such that they are mainly located in the centre of high tiered settlements (e.g. city and town centres). Therefore, it is expected that people will need to travel further to access these types of spaces. Considering the findings of the Needs and Demands assessment and reflecting on the standards in neighbouring authorities, a generic accessibility standard of 1,600m/20-minute walk will be applied.
Green and Blue corridors	No national standard	No accessibility standard identified. (Typology not identified)	35.6% willing to walk over 30 minutes (2,400m)	720m	There are no nationally prescribed standards for accessibility to Green and Blue Corridor spaces. Taking account of the findings of the Needs and Demands assessment and a consideration of similar typologies such as Natural and Semi-natural Greenspace, a local standard of

Table 9.4 Setting Open Space Accessibility Standards for Bradford District

Typology	National Standard (Fields in Trust)	Bradford Core Strategy Appendix 9 Standards	Needs and Demands assessment findings	Bradford Accessibility Standard	Comment / Explanation
					720m/9-minute walk will be applied.
Natural and semi-natural greenspace	720m (9-minute walk)	120m (1-minute walk) of a site up to 0.66ha and/or 1,200m (15-minute walk) of a site between 0.66ha and 1ha and/or 900m (11-minute walk) of a site between 1ha and 10+ha	(27.0% willing to walk and 62.3% willing to drive over 30 minutes) (2,4000m+)	720m	National standard recommended. Most other local authorities have adopted this standard and it would capture a greater number of the population willing to walk a lesser distance than identified in the needs and demands assessment.
Open land in settlements	Not applicable	Not applicable (Typology not identified)	Not applicable	800m	This local typology will not necessarily be found in every settlement. Where existing provision is available the local accessibility standard reflects that used for Parks as it this type of open space is similar in nature and function.
Outdoor sports facilities	1,200m (15-minute walk)	No accessibility standard identified.	Not part of the assessment	1,200m	To align with the national standard.
Parks and gardens	710m (9-minute walk)	400m (5-minute walk) of a local park and/or 1,200m (15-minute walk) of a district and/or borough park	77.8% willing to walk up to 10 minutes (800m).  71.3% willing to walk up to 15 minutes (1,200m).	800m	The local standard is set slightly higher than the national standard reflecting the findings of the Needs and Demands assessment which indicates that a large proportion of respondents were willing to walk up to 10 minutes. The standard also provides an average of the previous core strategy standards.

Table 9.4 Setting Open Space Accessibility Standards for Bradford District

Typology	National Standard (Fields in Trust)	Bradford Core Strategy Appendix 9 Standards	Needs and Demands assessment findings	Bradford Accessibility Standard	Comment / Explanation
Provision for children and young people	100m (1-2-minute walk) – LAPs 400m (5-minute walk) – LEAPs 1,000m (12-minute walk) – NEAPs 700m (9-minute walk) – BMX/Skate Parks	400m (5-minute walk) of a LEAP and or 1,000m (12-minute walk) of a NEAP and/or 1,000m (12-minute walk) of a site greater than a SEAP	58.8% willing to walk up to 15 minutes (1,200m) to an equipped play area 55.0% willing to walk up to 15 minutes (1,200m) to Teenage provision.	100m (Doorstep Playable space / LAP) 400m (Local & Neighbourhood playable space / LEAP) 700m (BMX/ Skate park) 1,000m (Destination Playable space)	A range of accessibility distances has been recommended based on the national standards and to align with the Playable Spaces Strategy.
